9. Notices

1. Preface

Audience

This document is intended for consumers and storage administrators. This guide assumes that the user has a basic understanding of storage and backup concepts.

Document Conventions

Symbol	Description
	Notes provide default configuration settings and other supplementary information.
	Important notes provide information on required configuration settings and other critical information.
	Tips provide recommendations or alternative methods of performing tasks or configuring settings.
	Warnings provide information that, when ignored, may result in potential loss, injury, or even death.

2. Overview

NAS Access

Method	Description	Requirements
Web browser	You can access the NAS using any computer on the same network if you have the following information: • NAS name (Example: http://example123/) or IP address • Logon credentials of a valid user account	• Computer that is connected to the same network as the NAS • Web browser
Qfinder Pro	Qfinder Pro is a desktop utility that supports Windows, macOS, Linux, and Chrome OS. To download Qfinder Pro, go to https://www.qnap.com/utilities.	• Computer that is connected to the same network as the NAS • Web browser • Qfinder Pro
Qmanager	Qmanager is a mobile application that enables administrators to manage and monitor NAS devices on the same network. You can download Qmanager from the Apple App Store and the Google Play Store.	• Mobile device that is connected to the same network as the NAS • Qmanager
Explorer (Windows)	You can map a NAS shared folder as a network drive to easily access files using Explorer.	• Windows computer that is connected to the same network as the NAS • Qfinder Pro (during mapping)
Finder (macOS)	You can map a NAS shared folder as a network drive to easily access files using Finder.	• Mac computer that is connected to the same network as the NAS • Qfinder Pro (during mapping)

Accessing the NAS Using a Browser

You can access the NAS using any computer on the network if you know its IP address and the logon credentials of a valid user account.

Note
If you do not know the IP address of the NAS, you can locate it using Qfinder Pro.

1. Verify that your computer is connected to the same network as the NAS.
2. Open a web browser on your computer.
3. Type the IP address of the NAS in the address bar.
   The QES login screen appears.
4. Specify your username and password.
   The default username and password is `admin`.

5. Click **Login**.
   The QES desktop appears.

Accessing the NAS Using Qfinder Pro

Qfinder Pro is a desktop utility that enables you locate and access QNAP NAS devices on a specific network. The utility supports Windows, macOS, Linux, and Chrome OS.

1. Install Qfinder Pro on a computer that is connected to the same network as the NAS.
   To download Qfinder Pro, go to https://www.qnap.com/en/utilities.
2. Open Qfinder Pro.
   Qfinder Pro automatically searches for all QNAP NAS devices on the network.
3. Locate the NAS in the list and then double-click the name or IP address.
   The QES login screen opens in the default web browser.
4. Specify your user name and password.
   The default user name and password is `admin`.
5. Click **Login**.
   The QES desktop appears.

Accessing the NAS Using Qmanager

Qmanager is a mobile application that enables administrators to manage and monitor NAS devices on the same network.

Administrators can perform the following actions with Qmanager.

- View system information such as CPU usage, memory usage, connection status, and system events
- Manage download and backup tasks
- Enable and disable application services
- Restart or shut down the NAS

1. Install Qmanager on an Android or iOS device.
   To download Qmanager, go to the Apple App Store or the Google Play Store.
2. Open Qmanager.
3. Tap **Add NAS**.
   Qmanager automatically searches for all QNAP NAS devices on the network.
4. Locate the NAS in the list, and then tap the name or IP address.
5. Specify your user name and password.
   The default user name and password is `admin`.
6. Optional: If your mobile device and NAS are not connected to the same subnet, perform one of the following actions.

Action	Steps
Tap **Add NAS manually**.	**a.** Specify the following information. • Host name or IP address of the NAS

	• Password of the admin account **b.** Tap **Save**.
Tap **Sign in QID**.	**a.** Specify the following information. • Email address that you used to create your QNAP account • Password of your QNAP account **b.** Tap **Sign in**. **c.** Locate the NAS in the list, and then tap the name or IP address.

Accessing the NAS Using myQNAPcloud

The myQNAPcloud service allows you to use the internet to access a NAS device outside a local area network (LAN).

1. Optional: Verify that myQNAPcloud is enabled.
   a. Go to **Control Panel** > **System** > **myQNAPcloud** .
   The **myQNAPcloud** window opens.
   b. Locate the device URL.
   The default URL format is `<device name>.myqnapcloud.com`.

Important
The device URL is only available if myQNAPcloud is enabled.
For details, see Enabling myQNAPcloud.

2. On your web browser, type the URL and then press **Enter**.

Enabling myQNAPcloud

The myQNAPcloud service allows you to use the internet to access a NAS device outside a local area network (LAN).

1. Go to **Control Panel** > **System** > **myQNAPcloud** .
   The **myQNAPcloud** window opens.
2. Click **Get Started**.
   The **myQNAPcloud wizard** opens.
3. Perform the following steps.
   a. Click **Start**.
   b. Type your QID and password.
   For details on creating a myQNAPcloud account, see https://support.myqnapcloud.com/features?&focus=howto.
   c. Click **Next**.
   d. Type a device name.
   e. Click **Next**.

myQNAPcloud generates the device URL.
The default URL format is `<device name>.myqnapcloud.com`.

Enabling My DDNS

The My DDNS service allows you to connect to network services on the NAS using the myQNAPcloud device URL.

1. Go to **Control Panel** > **System** > **myQNAPcloud** .
2. Verify that myQNAPcloud is enabled.
   For details, see Enabling myQNAPcloud.
3. Go to **Control Panel** > **System** > **myQNAPcloud** > **Remote Access Services** .
   The **myQNAPcloud** window opens.
4. Click **My DDNS**.
   The **My DDNS** tab appears.
5. Select **Enable myQNAPcloud DDNS service** and then click **Apply**.
   myQNAPcloud generates the device URL.
   The default URL format is `<device name>.myqnapcloud.com`.

Accessing Shared Folders on the NAS

To access a shared folder on a NAS, you must first map the folder as a network drive.

For details on drive mapping, see the following:

- Mapping a Shared Folder on a Windows Computer
- Mounting a Shared Folder on a Mac Computer
- Mounting a Shared Folder on a Linux Computer

To access a mapped drive, use a file manager on your computer.

- On a Windows computer, open **Windows Explorer** and then locate the mapped drive.
- On a Mac computer, open **Finder** and then locate the mapped drive.
- On a Linux computer, open your preferred file manager and then locate the mapped drive.

About QES

QNAP Enterprise System (QES) is an operating system that is based on FreeBSD Kernel and ZFS to provide the stability and functionality of traditional Linux operating systems and native file systems.

Features and Benefits

QES provides the following features and benefits.

Feature	Description
Remote data synchronization	Block-level SnapSync provides remote backup and disaster recovery at any time.
Application consistent snapshots	Snapshot Agent provides data consistency when taking snapshots.

Feature	Description
Higher-capacity efficiency	Block-level deduplication, real-time data compression, and thin provisioning provide increased efficiency.
High availability, high reliability, and high serviceability	QES supports dual active controllers and dual Mini-SAS channel backups, and tolerates single-node failure to ensure uninterrupted mission-critical enterprise tasks and productivity.
Minimal backup configuration	The minimum requirements for a QNAP Snapshot Agent and VSS Hardware Provider operating environment include a QNAP ES NAS and a server. You can deploy all applications, including VSS Service, Requestor, Provider and QNAP Snapshot Agent, on the same server.
Excellent random write performance	QES uses a battery-protected DRAM write cache with cache data protection, and flash read acceleration.
Well-rounded networking support	QES supports 10 Gigabit Ethernet and iSCSI to provide storage deployment flexibility.

Note
The “high availability” and “battery-protected DRAM write-cache” features are only available on dual-controller ES NAS devices.

QES Installation

You can install QES using any of the following methods.

Method	Description	Requirements
Qfinder Pro installation	If the NAS is connected to your local area network, you can do the following: • Locate the NAS using Qfinder Pro. • Complete the steps in the Smart Installation Guide wizard. For details, see Installing QES Using Qfinder Pro.	• Computer • Network cable • Qfinder Pro installer
Switch from QTS	If the NAS is currently installed with QTS, you can switch to QES. For details, see System Reset and Restore to Factory Default.	N/A

Installing QES Using Qfinder Pro

Warning

1. Power on the NAS.
2. Connect the NAS to your local area network.
3. Run Qfinder Pro on a computer that is connected to the same local area network.

Tip
To download Qfinder Pro, go to https://www.qnap.com/utilities.

4. Locate the NAS in the device list, and then double-click the name or IP address.
   The **QES Installation Wizard** loads in the default web browser.
5. Click **Manual Setup**.
   The **Enter the NAS name and administrator's password** screen appears.
6. Specify a NAS name and password.
   -
   -
7. Click **Next**.
   The **Set the date and time** screen appears.
8. Specify the time zone, date, and time.

Tip
QNAP recommends connecting to an NTP server to ensure that the NAS follows the Coordinated Universal Time (UTC) standard.

9. Click **Next**.
   The **Configure the network settings** screen appears.
10. Select **Obtain an IP address automatically (DHCP)**.
11. Click **Next**.
    The **Cross-platform file transfer service** screen appears.
12. Select the types of devices that you will use to access shared folders on the NAS.
13. Click **Next**.
    The **Check system disk status** screen appears.
14. Select a storage pool to install QES on.

Important

15. Click **Next**.
    The **Summary** screen appears.
16. Review the settings.
17. Click **Apply**.
    A confirmation message appears.

Warning

18. Click **Confirm**.

QES Navigation

Task Bar

No.	Element	User Actions
1	**Main Menu**	Click the button to open the **Main Menu** panel on the left side of the desktop.
2	**Search**	• Type key words to locate settings, applications, and help content. • Click an entry in the search results to open the application or system utility.

3	**Background Tasks**	• Position the mouse pointer over the button to see the number of background tasks that are running. Examples of background tasks are file backup and multimedia conversion.
		• Click the button to see the following details for each background task:
		  • Task name
		  • Task description
		  • Progress (percentage of completion)
		• Click to stop a task.

4	**External Devices**	• Position the mouse pointer over the button to view the number of external storage devices and printers that are connected to the USB and SATA ports on the NAS. • Click the button to view the details for each connected device. • Click a listed device to open File Station and view the contents of the device. • Click **Settings** to open the **UPS** screen.

No.	Element	User Actions

5	**Event Notifications**	• Position the mouse pointer over the button to see the number of recent errors, warnings, and notices.
		• Click the button to view the following details for each event:
		  • Event type
		  • Description
		  • Timestamp
		  • Number of instances
		• Click a list entry to view the related utility or application screen.
		• Clicking a warning or error log entry opens the **System Logs** window.
		• Click **More>>** to open the **System Logs** window.
		• Click **Clear All** to delete all list entries.

6	**Options**	Click your profile picture to open the **Options** screen.

7	**[USER_NAME]**	Click the button to view the last login time and the following menu items:
		• **Options**: Opens the **Options** window
		• **Sleep**: Keeps the NAS powered on but significantly reduces power consumption
		This feature is only available on models with certain hardware specifications.
		• **Restart**: Restarts the NAS
		• **Shutdown**: Shuts down QES and then powers off the NAS
		Note
		You can also power off the NAS using one of the following methods:
		  • Press and hold the power button for 1.5 seconds.
		  • Open Qfinder Pro, and then go to **Tools** > **Shut down Device** .
		  • Open Qmanager, and then go to **Menu** > **System Tools** > **System** . Tap **Shutdown**.
		• **Logout**: Logs the user out of the current session

No.	Element	User Actions

8	**More**	Click the button to view the following menu items:
		• **Help**: Displays links to the Quick Start Guide, Virtualization Guide, QES Help, and online tutorials page
		• **Language**: Opens a list of supported languages and allows you to change the language of the operating system
		• **Desktop Preferences**: Opens a list of display modes and allows you to select your preferred mode of displaying the QES desktop based on your device type
		• **Feedback**: Opens the QNAP Feature Request / Bug Report web page
		• **Data & Privacy**: Opens the **QNAP Privacy Policy** page
		• **About**: Displays the following information:
		  • Operating system
		  • Hardware model
		  • Operating system version
		  • Number of installed drives
		  • Number of empty drive bays
		  • System volume name
		  • Used disk space
		  • Available disk space

9	**Dashboard**	Click the button to display the dashboard.

Options

#	Tab	User Actions

1	**Profile**	• Specify the following optional information:
		  • Profile picture
		  • E-mail
		  • Phone number
		• Click **View** to open the **System Connection Logs** screen.
		• Click **Edit login screen** to open the **Login Screen** configuration screen in the **Control Panel** window.
		• Click **Apply** to save all changes.

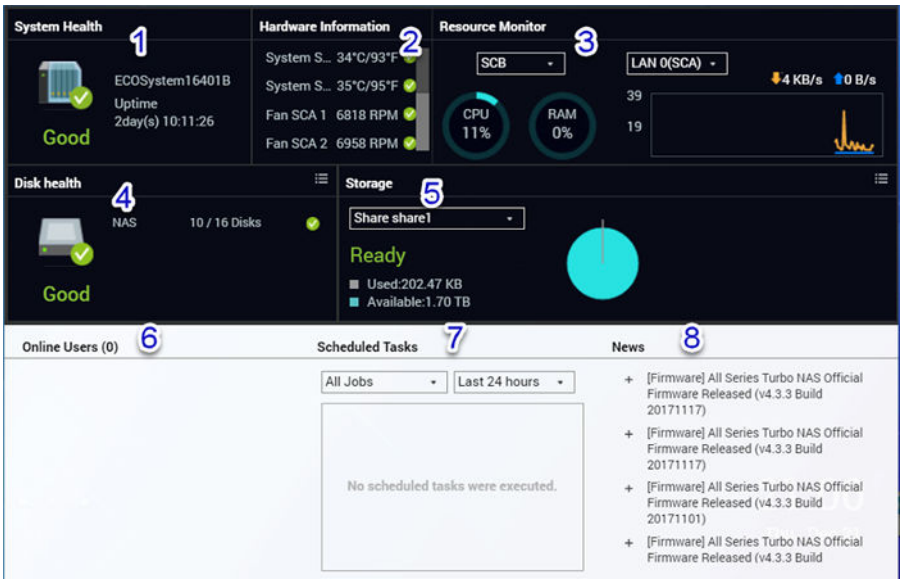
2	**Wallpaper**	• Select a wallpaper from the built-in options or upload a photo. • Click **Apply** to save all changes.

#	Tab	User Actions

3	**Change Password**	• Specify the following information:
		  • **Old password**
		  • **New password**: Specify a password with a maximum of 64 characters. QNAP recommends using passwords with at least 6 characters.
		  • Click **Apply** to save all changes.

4	**Miscellaneous**	• Enable the following settings.
		  • **Auto logout after an idle period of**: You can specify the duration of inactivity after which the user is automatically logged out.
		  • **Warn me when leaving QES**: When enabled, QES prompts users for confirmation whenever they try to leave the desktop (by clicking the Back button or closing the browser). QNAP recommends enabling this setting.
		  • **Reopen windows when logging back into QES**: When enabled, the current desktop settings (including all open windows) are retained until the next session.
		  • **Show the desktop switching button**: When enabled, QES displays the desktop switching buttons **< >** on the left and right sides of the desktop.
		  • **Show the link bar on the desktop**: When enabled, QES displays the link bar on the bottom of the desktop.
		  • **Show the Dashboard button**: When enabled, QES displays the **Dashboard** button on the task bar.
		  • **Show the NAS time on the desktop**: When enabled, QES displays the server date and time on the desktop.
		• **Keep Main Menu open after selection**: When enabled, QES keeps the main menu pinned to the desktop after you open it.
		• Click **Apply** to save all changes.

Dashboard



The dashboard opens in the lower right corner of the desktop.

Note
You can click and drag a section onto any area of the desktop.

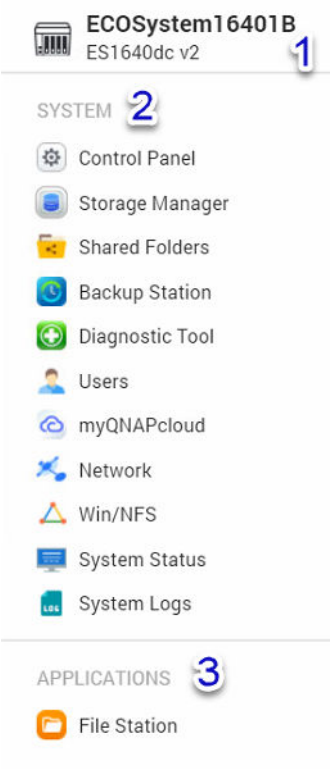
#	Section	Displayed Information	User Actions
1	System Health	• NAS name • Uptime (number of days, hours, minutes and seconds) • Health status	Click the heading to open the **System Information** screen in the **System Status** window. If disk-related issues occur, clicking the heading opens the **Storage Manager** window.
2	Hardware Information	• System temperature • System fan speed	Click the heading to open the **Hardware Information** screen in the **System Status** window.
3	Resource Monitor	• CPU usage in % • Memory usage in % • Network upload and download speeds/rates	Click the heading to open the **Resource Monitor** screen in the **System Status** window.

#	Section	Displayed Information	User Actions

4	Disk Health	• Number of installed disks
		• Health status of installed disks
			• Click the heading to open the Disk Health screen in the **Storage Manager** window.
			• Click to view the following information for each installed disk:
			  • Capacity/size
			  • Temperature
			  • Health status
			• Click **Details** to open the **Overview** screen in the **Storage Manager** window.

5	Storage	For each volume: • Status • Used space • Available space For each storage pool: • Status • Used space • Available space	• Click the heading to open the **Storage Space** screen in the **Storage Manager** window. • Click to switch between volume and storage pool information.
6	Online Users	• User name • Session duration • IP address	Click the heading to open the **Online Users** screen in the **System Logs** window.
7	Scheduled Tasks	• Task type • Task summary • Task name • Timestamp • Status	Use the filters to view tasks that were executed within a specific period.
8	News	Links to QNAP announcements	Click the heading to open the relevant pages in the QNAP website.

Main Menu



No.	Section	Description	User Actions
1	NAS Information	Displays the NAS name and model number.	N/A

No.	Section	Description	User Actions

2	System	Displays a list of system utilities and other programs that enable you to manage the NAS.
		The following are the default system utilities:
		• Control Panel
		• Storage Manager
		• Shared Folders
		• Backup Station
		• Diagnostic Tool
		• Users
		• myQNAPcloud
		• Network
		• Win/NFS
		• System Status
		• System Logs
			• Open a system utility or application in the QES desktop
			  • Click a menu item.
			  • Right-click a menu item and then select **Open**.
			• Create a shortcut on the desktop
			  • Right-click a menu item and then select **Create shortcut**.
			  • Click and drag a menu item to the desktop.

3	Applications	Displays a list of applications developed by QNAP or third-party developers. When an app is installed, it is automatically added to the applications list. The following are the default applications: • File Station	

Desktop

#	Element	Description	User Actions
1	Wallpaper	This is a digital image that is used as a background for the QES desktop. Users can either select from one of the provided wallpapers or upload an image	Change the wallpaper in the **Options** window.

2	Shortcut icons	This opens an app or a utility.
		When you install an application, QES automatically creates a shortcut on the desktop. The following are the default shortcuts:
		• Control Panel
		• File Station
			• Click an icon to open the application window.
			• Right-click an icon and then select one of the following:
			  • **Open**: Opens the application window
			  • **Open in a new browser tab**: Opens the application in a a new tab
			  • **Remove**: Deletes the icon from the desktop
			• Click and drag an icon to another desktop.

3	Desktop	This area contains open system utilities and applications. The desktop consists of three separate screens.	Click **<** or **>** to move to another desktop.
4	Date and time	This displays the date and time that the user configured during installation of the operating system.	N/A
5	Notifications	This notifies the user about important system events that may or may not require user action. Notifications appear in the lower right corner of the desktop.	Click the notification to open the corresponding utility or app.

Desktop Utilities

QES works with the following QNAP desktop utilities.

For details, go to https://www.qnap.com/utilities.

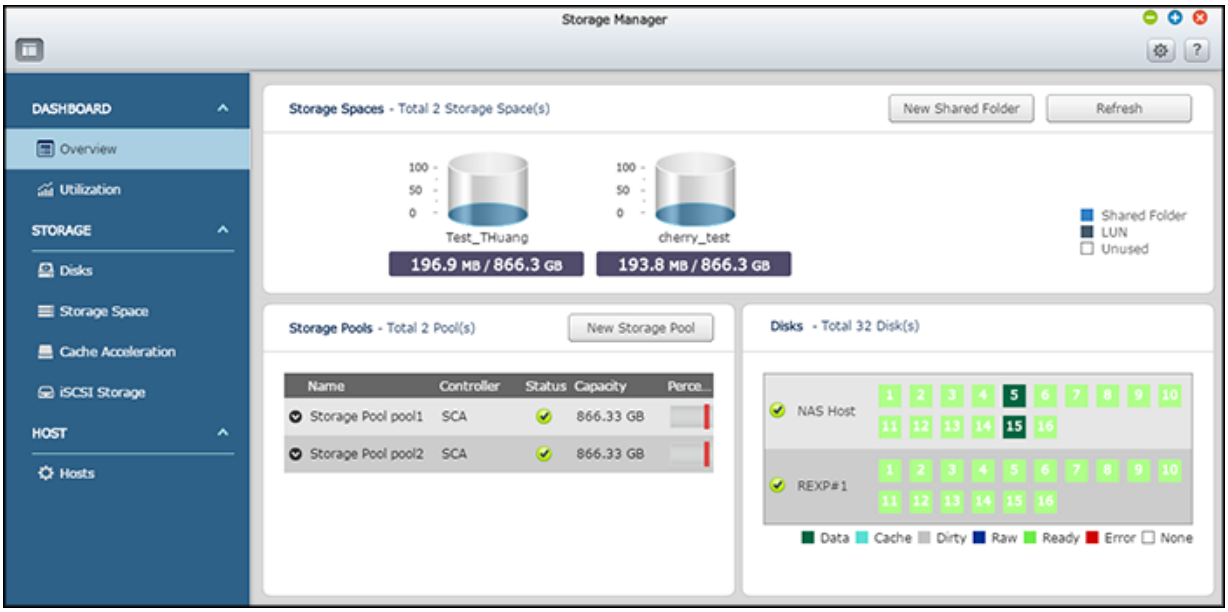
Utility	Description	Supported Operating System or Hypervisor
Qfinder Pro	This allows you to locate all NAS devices on a local area network (LAN).	• Windows • MacOS • Ubuntu • Chromebook
myQNAPcloud Connect	This allows you to access published NAS services over the internet using VPN.	Windows
Qsync	This allows you to enable automatic file synchronization across different devices.	• Windows • Mac

Utility	Description	Supported Operating System or Hypervisor
vSphere (Web) Client plug-in	This allows you to directly manage VMware datastores on the NAS from the vSphere client console.	Windows
Q'center Virtual Appliance	This allows you to manage several NAS devices from a central management console.	• Microsoft Hyper-V • VMware ESXi
QNAP Snapshot Agent	This allows you to create application consistent LUN snapshots for data backup and restoration.	Windows

3. Storage Manager

About Storage Manager

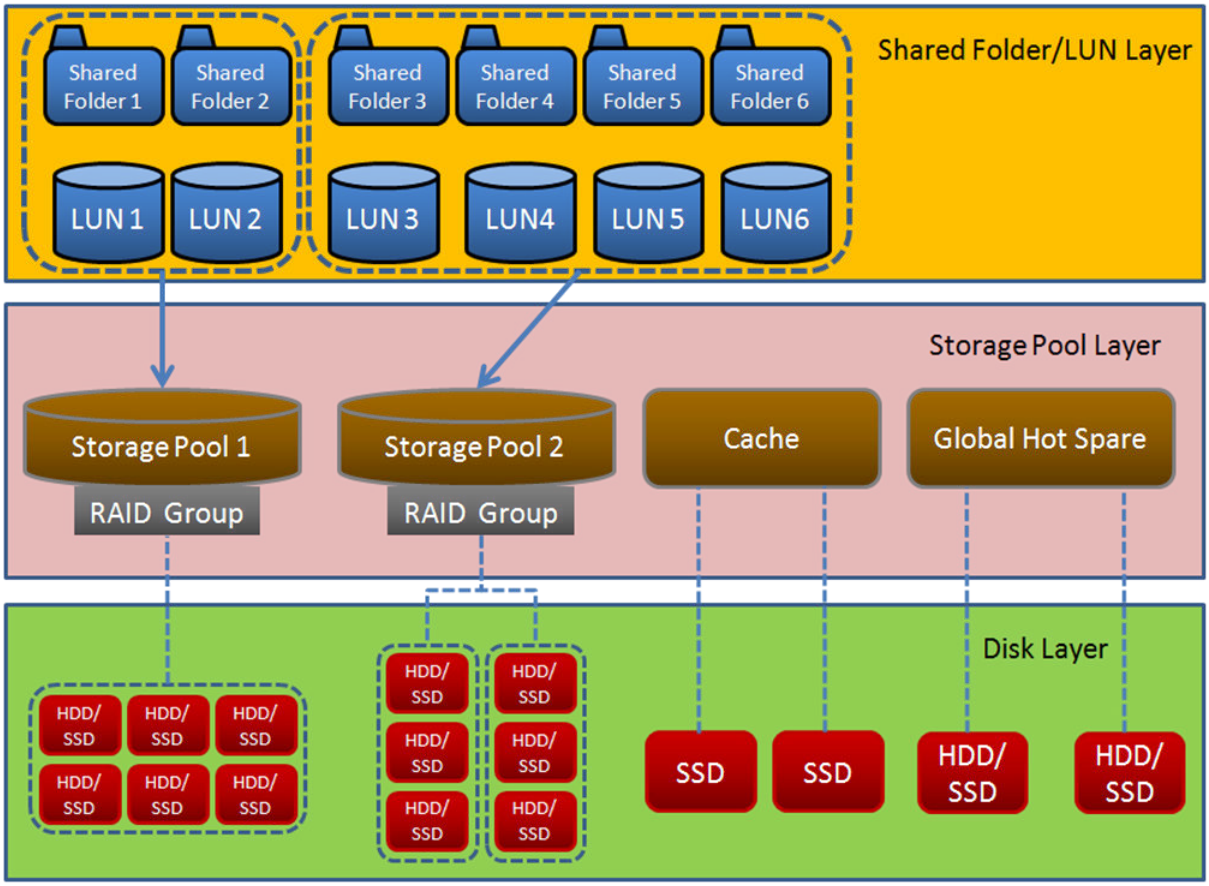
Based on QNAP's flexible volume architecture, Storage Manager provides a secure, flexible and comprehensive approach to managing storage on your NAS.



QNAP Flexible Architecture

QNAP Flexible Architecture consists of three layers, which combine to offer storage flexibility and data protection.

- Disks
- Storage pools
- Shared folders and LUNs



Note
You can expand the storage capacity of your NAS by connecting a QNAP expansion unit. For details on compatible models, see www.qnap.com/compatibility or your NAS hardware user guide.

Storage Manager Global Settings

You can access the **Global Settings** screen by clicking  at the top-right of the **Storage Manager** window.

Setting	Description
Activate Predictive SMART Migration	When an S.M.A.R.T error is detected on a disk, QES automatically removes that disk from the RAID group, replaces it with a spare disk, and then begins the RAID rebuild process on the group.
Disk S.M.A.R.T polling time (minutes)	QES periodically checks disks for S.M.A.R.T. errors. The default frequency is every 10 minutes.

Setting	Description
TLER/ERC timer (seconds)	When a read or write error occurs on a disk, it becomes unresponsive because its firmware attempts to fix the error.. QES might interpret this unresponsiveness as disk failure. When this setting is enabled, QES waits for the specified number of seconds before marking a disk as failed. **Tip** Disk manufacturers may use any of the following terms for this setting: • Error recovery control (ERC) • Time-limited error recovery (TLER) • Command completion time limit (CCTL) Consider specifying values according to the disk manufacturer's recommendations.
Delete the oldest snapshots when a storage pool is full	QES automatically deletes old snapshots when no storage pool space is available. You can specify snapshots taken on a schedule, snapshots taken manually by a user, or both.
Enable Scrub Pool schedule	Enable a scheduled storage pool scrub for all storage pools on the NAS. Scrubbing scans the file system of each RAID group within that storage pool. QES automatically attempts to repair any failed blocks to maintain file system consistency. **Important** During scrubbing, the read and write performance of the storage pool may be reduced. You should schedule scrubbing tasks during off-peak hours. For details on manually starting a scrubbing task, see Scrubbing a Storage Pool.
Enable temperature alarm for hard disk drives	When the disk temperature of any HDD exceeds the specified threshold, QES displays an error notification. To set disk temperature alarms on individual disks, see Disk Health Information.
Enable temperature alarm for solid state drives	When the disk temperature of any SSD exceeds the specified threshold, QES displays an error notification. To set disk temperature alarms on individual disks, see Disk Health Information.

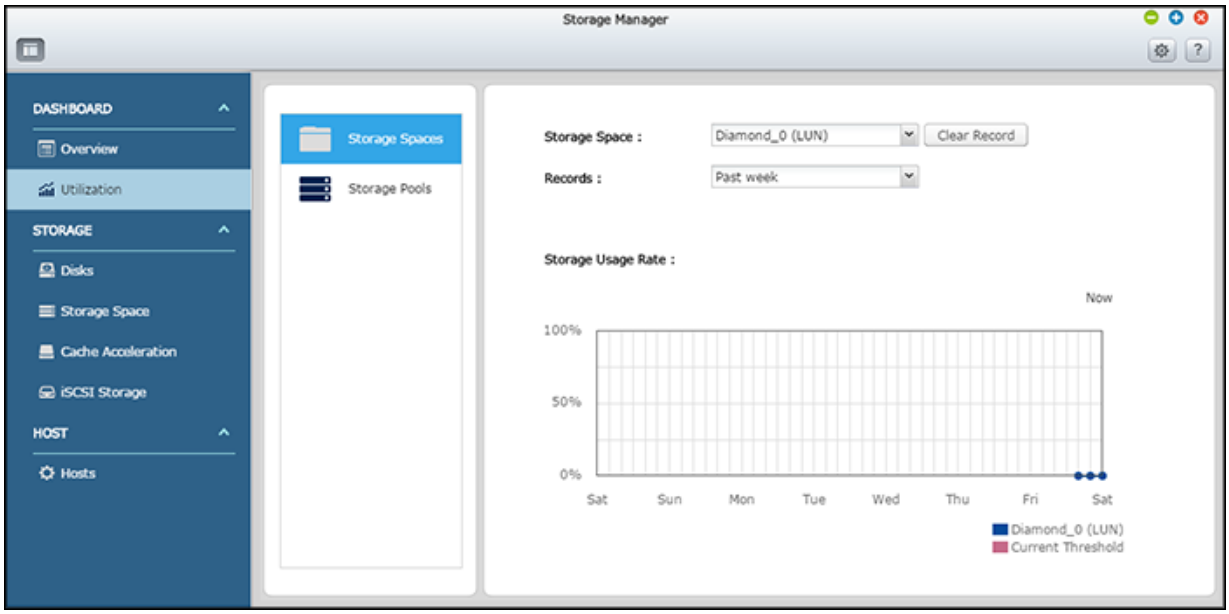
Dashboard

The Storage Manager dashboard provides information on storage allocation and usage.

Overview

Section	Description	More Information	User Actions
Storage Spaces	Names of shared folders and LUNs, and the following information for each: • Maximum capacity • Used capacity	Shared Folders iSCSI Storage	
Storage Pools	Names of storage pools, and the following information for each: • Controller • Status • Total capacity • Used capacity	Storage Pools	• Click  to display all RAID groups in the storage pool. • Select **Show members** to see which disks belong to the RAID group.
Disks	Names of storage enclosures (NAS and JBODs) and disks	Disk Health Information	• Click on an enclosure name to open the **Enclosure Information** window. • Click on a disk icon (for example: ) to open the **Disk Health** window.

Utilization



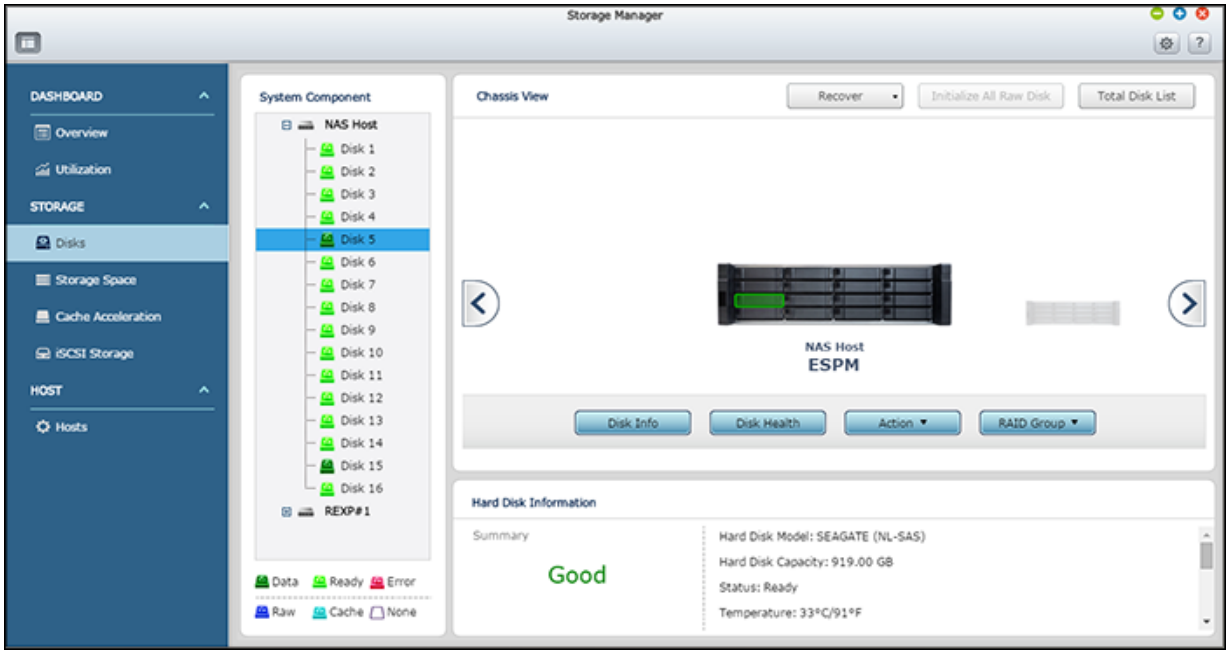
This screen enables you to monitor storage space usage during a specified period.

Storage

Disks

This screen enables you to monitor and manage disks and connected expansion units.

Tip
QNAP dual-controller ES NAS models only support SAS disks. To install a SATA disks in an ES NAS with full S.M.A.R.T. compatibility, use a QNAP QDA-SA SATA-to-SAS adapter. You can check the hardware status, health, and temperature of disks that are using QNAP QDA-SA adapters on the **Disks** screen.



Disk Management

Disk Status Information

Selecting a disk in the **System Component** list enables you to view its health status and hardware information. The number indicates the drive bay and the color indicates the current status of the disk.

Status	Color	Description
Data		The disk contains data.
Ready		The disk is healthy and ready to use. QES uses all ready disks as global RAID spares.
Error		QES has detected bad sectors or I/O errors. You must replace the disk immediately.
Raw		The disk has not been initialized.
Cache		The disk is used as an SSD cache.
Dirty		The disk was removed from a storage pool and then replaced by a hot spare. This occurred due to one of the following reasons: • QES detected I/O errors on the disk and automatically removed it from the pool. • A user physically removed the disk. QES replaced it with a hot spare, and then the user installed the disk again..

Disk Actions

Selecting a disk in the **System Component** list enables you to view its status and general hardware details.

Action	Description
Disk Info	View disk details, including the disk model, model number, serial number, disk capacity, firmware version, ATA version and ATA standard.
Disk Health	View disk S.M.A.R.T information. For details, see Disk Health Information.
Scan Now	Scan the disk for bad blocks. **Tip** Scan the disk whenever the status changes to `Error`. If QES does not detect any bad blocks, the status changes back to `Ready`. To view the number of bad blocks, go to **Disk Information** > **Status** .
Locate	Prompt the drive LEDs to blink so that you can locate the drive in a NAS or expansion unit.
RAID Group	Select a RAID group to view its details and member disks.

NAS and Enclosure Actions

Selecting a NAS or expansion unit in the **System Component** list enables you to view its status and general hardware details.

Action	Description
Enclosure Info	View full hardware details of the NAS or expansion unit, including the model, serial number, firmware version, BUS type, CPU temperature, system temperature, power status, and fan speeds.
Locate	Prompt the NAS or expansion unit chassis LEDs to blink so that you can locate the device in a rack.
Rename enclosure	Rename the selected expansion unit.
RAID Group	Select a RAID group to view its details and member disks.
Reinitialize enclosure ID	Reset all expansion unit IDs, and then give each unit a new ID number starting from 1 based on the order than they are connected. This can be used if the expansion unit IDs appear out of sequential order in the **System Component** list.

Viewing the Disk List

1. Go to **Storage Manager** > **Disks** .
2. Click **Total Disk List**.
   The **Total Disk List** window appears.
3. Optional: Select a filter type and value to display a specific set of disks.

Disk Health

Disk Health Information

S.M.A.R.T. (Self-Monitoring, Analysis and Reporting Technology) is a disk health monitoring system built into all modern disks. QES uses S.M.A.R.T. to continuously monitor your disks for problems.

Tab	Description	Actions
Summary	S.M.A.R.T. disk information overview and the results of the last disk test	N/A
Disk Information	Disk hardware information, including model, capacity, serial number, firmware version, ATA version, and ATA standard	N/A
SMART Information	S.M.A.R.T disk information	N/A
Test	S.M.A.R.T. disk test options	Select one of the following options. • **Rapid Test**: Tests the electrical and mechanical properties of the disk, and a small portion of the disk surface. This test takes approximately one minute. • **Complete Test**: Tests the electrical and mechanical properties of the disk, and the full disk surface. This test can take an indefinite amount of time to complete..
Settings	Settings that you can apply to individual or a set of disks	Enable the following settings. • **Enable temperature alarm**: When the disk temperature exceeds the specified threshold, QES displays an error notification. • **S.M.A.R.T. Test schedule**: Run a rapid and complete S.M.A.R.T. disk check periodically. QES displays the results on the **Summary** screen. **Tip** You can apply these settings to the current disk, all disks, or to all disks with the same type as the current disk (HDD or SSD).

Testing Disk Performance

1. Go to **Storage Manager** > **Disks** .
2. Click **Total Disk List**.
   The **Total Disk List** window appears.
3. Select one or more disks.

4. Click **Performance test**.
   The performance test starts. QES displays the results in the **Sequential Read** column.

5. Optional: Schedule a weekly performance test for all disks.
   The weekly test runs every Monday at 6:30 AM.

   a. Click **Weekly test**.

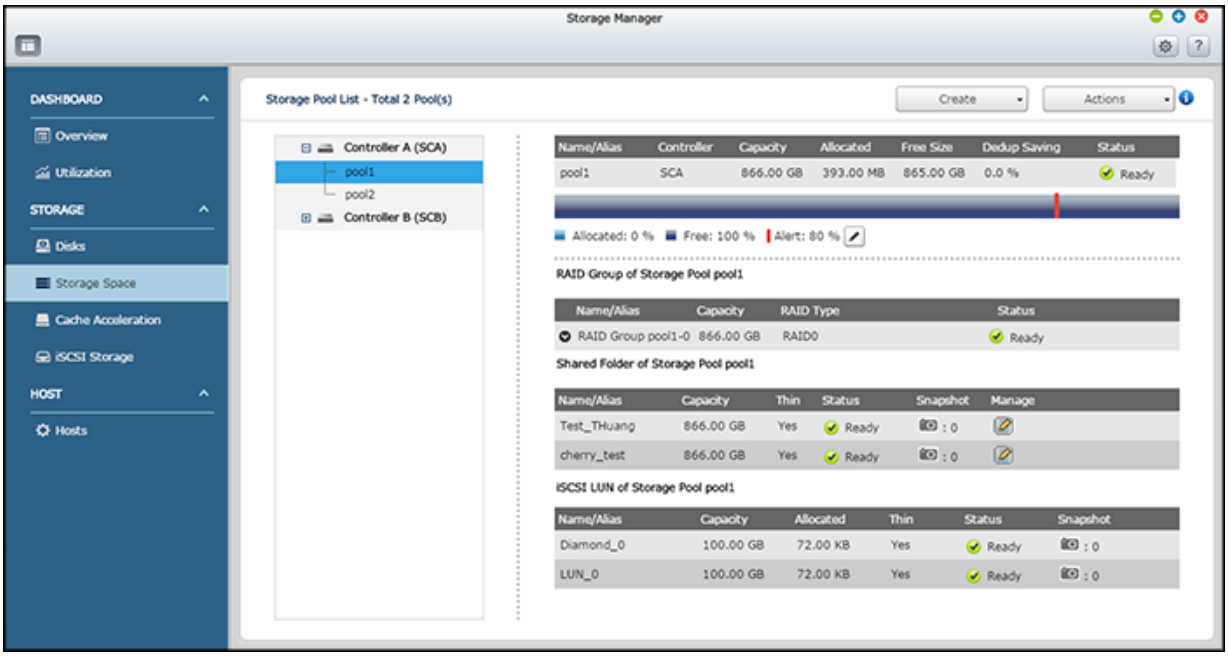
   b. Select **Enable weekly test speed**.

   c. Click **OK**.

Storage Space

Storage Pools

A storage pool is designed to aggregate multiple disks into one large storage space. Disks are joined together using RAID technology to form a RAID group. Storage pools may contain more than one RAID group.



Storage Pool Creation

Creating a Storage Pool

1. Go to **Storage Manager** > **Storage Space** .

2. Click **Create** > **New Storage Pool** .
   The **Create Storage Pool** window opens.

3. Specify a name for the storage pool.

   - Valid characters: 0-9, a-z, A-Z, dash -, underscore _, period .
   - Length: 1 to 31 characters

4. Optional: Select a controller.

5. Optional: If you want to use disks in a connected expansion unit, select the expansion unit from the **Enclosure Unit** list.
6. Select one or more disks.

Warning
All data on the selected disks will be deleted.

7. Select a RAID type.
   QES displays all RAID types that match the number of selected disks and automatically selects the most optimized RAID type. For details, see RAID Types.

Tip
Use the default RAID type if you are unfamiliar with the technology.

8. Click **Next**.
   The **Pool Creation Summary** window opens.
9. Click **Create**.
   A confirmation message appears.
10. Click **OK**.

QES creates the storage pool and then displays the information on the **Storage Space** screen.

Creating a RAID 50 or RAID 60 Storage Pool

RAID 50 and RAID 60 groups are created by adding two or more RAID 5 or 6 sub-groups to a storage pool. QES stripes the sub-groups using RAID 0.

1. Go to **Storage Manager** > **Storage Space** .
2. Click **Create** > **New Storage Pool** .
   The **Create Storage Pool** window opens.
3. Specify a name for the storage pool.
   - Valid characters: 0-9, a-z, A-Z, dash -, underscore _, period .
   - Length: 1 to 31 characters.
4. Optional: Select a controller.
5. Optional: Select an expansion unit from the **Enclosure Unit** list.
6. Create the first sub-group.
   a. Select disks.
      RAID 5 requires at least 3 disks. RAID 6 requires at least 4 disks.

Warning
All data on the selected disks will be deleted.

   b. Select a RAID type of `RAID 50` or `RAID 60`.
   c. Click **Next**.
7. Create the second sub-group.

a. Select disks.
For the best performance, the number of disks should be the same as the first sub-group.

Warning
All data on the selected disks will be deleted.

b. Click **Next**.

8. Click **Create**.
A confirmation message appears.

9. Click **OK**.
QES creates the storage pool and then displays the information on the **Storage Space** screen.

10. Optional: Add more RAID 5 or RAID 6 sub-groups to the storage pool.
You can add additional using the **Expand Storage Pool** wizard. For details, see Expanding a Storage Pool.

Storage Pool Management

Removing a Storage Pool

Before removing a storage pool, remove all shared folders and LUNs in the storage pool.

1. Go to **Storage Manager** > **Storage Space** .
2. Select a storage pool.
3. Select **Actions** > **Remove Pool** .
The **Storage Pool Removal Wizard** window opens.
4. Click **Apply**.

Expanding a Storage Pool

You can expand the capacity of a storage pool by adding one or more ready disks. QES uses these disks to create a new RAID group, and then combines it with the existing RAID groups using striping.

Important
Adding disks to a RAID 1 pool changes the RAID type of the pool to RAID 10.

The new RAID group must have the same RAID type as each existing RAID group in the pool. The number of required disks for expansion depends on the current RAID type of the specified pool.

Pool RAID Type	Disks Required to Expand Pool
RAID 0	≥ 1
RAID 1	2
RAID 5	≥ 3
RAID 6	≥ 4
RAID-TP	≥ 5
Triple Mirror	Multiple of 3
RAID 10	Multiple of 2
RAID 50	≥ 3 for each additional RAID 5 group
RAID 60	≥ 4 for each additional RAID 6 group

1. Go to **Storage Manager** > **Storage Space** .
2. Select a storage pool.
3. Select **Actions** > **Expand Pool** .
   The **Expanding Storage Pool** window opens.
4. Optional: Select an expansion unit from the **Enclosure Unit** list.

Important
If the expansion unit is disconnected from the NAS, the storage pool will become inaccessible until it is reconnected.

5. Select one or more disks.

Warning
All data on the selected disks will be deleted.

6. Click **Expand**.
   A confirmation message appears.
7. Click **OK**.

Scrubbing a Storage Pool

Scrubbing a storage pool scans the file system of each RAID group in the pool. QES automatically attempts to repair bad blocks to maintain data consistency. For details on creating a RAID scrubbing schedule, see Storage Manager Global Settings.

Important
The read and write performance of storage pools is temporarily degraded during RAID scrubbing.

1. Go to **Storage Manager** > **Storage Space** .
2. Select a storage pool.
3. Select **Actions** > **Scrub Pool** .
   The **Start Storage Pool Scrub** window opens.
4. Click **Scrub**.
5. Optional: To stop a scrubbing task, click **Actions** > **Stop Scrubbing Pool** .

Taking a Storage Pool Offline

Taking a pool offline enables you to perform maintenance such as changing SAS cables, without powering off your NAS or losing data.

1. Go to **Storage Manager** > **Storage Space** .
2. Select a storage pool.
   Ensure that the storage pool status is not already `Offline`.
3. Select **Actions** > **Offline Pool** .
   The **Take Storage Pool Offline** window opens.
4. Click **Take Offline**.
   A warning message appears.

5. Click **Yes**.

The status of the storage pool changes to `Offline`. The status of the storage pools RAID groups changes to `Unmounted`.

Bringing a Storage Pool Online

The storage pool must be offline.

1. Go to **Storage Manager** > **Storage Space** .
2. Select a storage pool.
3. Select **Actions** > **Online Pool** .
   A confirmation message appears.
4. Click **Yes**.

The status of the storage pool and all RAID groups in the pool change to `Ready`.

Configuring a Pool Space Alert Threshold

QES issues a warning when the percentage of used storage pool space reaches the specified value.

1. Go to **Storage Manager** > **Storage Space** .
2. Select a storage pool.
3. Click  .
4. Select **Please input the alert threshold [1-100]**.
5. Specify a space alert threshold.
   The default threshold is 80.
6. Click **Apply**.
   A confirmation message appears.

System Pool

The system pool is a special storage pool that QES uses to store application data and settings. QES creates the system pool when the NAS is initialized. QES combines 13 GB from each system disk in a four-way mirror RAID configuration.

Important

- The system disks are usually located in the first four drive bays of your NAS.
  For details, see your NAS user guide.
- Using the system disks for general data storage can affect system pool performance. QNAP recommends installing four SSDs as system disks, and then configuring them as SSD read cache.
  For details, see Cache Acceleration.

Viewing System Pool Status

1. Go to **Storage Manager** > **Storage Space** .
2. Select **Actions** > **System Pool Info** .
   The **System Pool Info** window opens.

RAID

RAID Types

Important

- For best performance and space efficiency, you should use disks of the same brand and capacity when creating a RAID group.
- Increasing the number of disks in a RAID group increases the risk of simultaneous disk failure and lengthens rebuild times. When creating a storage pool with a large number of disks, you should split the disks into sub-groups using RAID 50 or RAID 60.

RAID Type	Number of Disks	Disk Failure Tolerance	Overview
RAID 0	≥ 2	0	• Disks are combined together using striping. • RAID 0 offers the fastest read/write speeds and allows all disk capacity to be used • No disk failure protection. This type should be paired with a data backup plan.
RAID 1	2	1	• An identical copy of data is stored on two disks. • If either disk fails, data can still be read from the other disk. • Half of the total disk capacity is lost, in return for a high level of data protection. • RAID 1 is suitable for storing important data.

RAID Type	Number of Disks	Disk Failure Tolerance	Overview
RAID 5	≥ 3	1	• Data and parity information are striped across all disks. • The capacity of one disk is lost for parity. This means that if any one disk fails, it can be replaced and the data on it can be restored. • Striping means read speed is increased with each additional disk. • Recommended for a good balance between data protection and speed. Ideal for running databases and other transaction-based applications • The number of disks in a RAID 5 group should not exceed 9. For a greater number of disks use RAID 50.
RAID 6	≥ 4	2	• Data and parity information are striped across all disks. • The same as RAID 5 but two disks are used for parity. This means that it protects against two disk failures, but the capacity of two disks are lost. • Recommended for critical data protection, business and general storage use. It provides high disk failure protection and read performance. • The number of disks in a RAID 6 group should not exceed 16. For a greater number of disks use RAID 60.
RAID 10	≥ 4 (must be an even number)	2 (Must be in 2 different pairs)	• Every two disks are paired using RAID 1 for failure protection. Then all pairs are striped together using RAID 0. • Excellent read/write speeds and high failure protection, but half the disk capacity is lost. • Recommended for applications that require high performance and fault tolerance, such as databases.

RAID Type	Number of Disks	Disk Failure Tolerance	Overview
RAID 50	≥ 6	1 per disk sub-group	• Multiple small RAID 5 groups are striped to form one RAID 50 group. • Better failure protection and faster rebuild times than RAID 5. More storage capacity than RAID 10. • Recommended for applications that require high fault tolerance, capacity, and random access performance.
RAID 60	≥ 8	2 per disk sub-group	• Multiple small RAID 6 groups are striped to form one RAID 60 group. • Better failure protection and faster rebuild time than RAID 6. More storage capacity than RAID 10. • Recommended if you need higher fault tolerance than RAID 50.
Triple Mirror	3	2	• An identical copy of data is stored on three disks. • There is also no degradation in performance while the RAID group is being rebuilt. • Read performance is increased, but capacity is greatly decreased. • Triple Mirror is suitable for storing critical data.
RAID-TP	4	3	• Similar to RAID 5 and 6, but parity is written to three different disks. • Data is striped across all non-parity disks. • RAID-TP adds an extra level of redundancy over RAID 6.

RAID Group Capacity

QES uses the ZFS RAID scheme RAID-Z. RAID-Z capacity is calculated differently from normal RAID. To estimate the storage capacity of a RAID group in QES, use our online calculator at https://enterprise-nas.qnap.com/en/calculator.

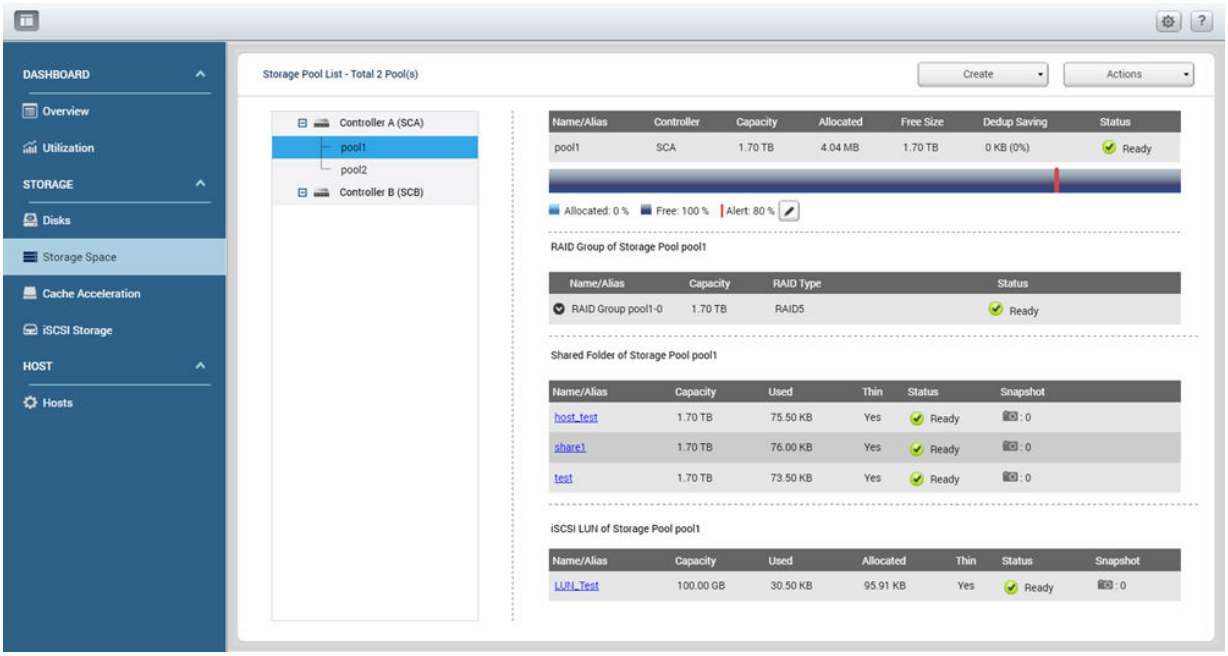
RAID Disk Failure Protection

All RAID types except for RAID 0 can survive a certain number of disk failures without losing any data. When a disk in a RAID group fails, the RAID group changes to `degraded` mode and then QES performs either of the following actions..

Spare Disk Available	Actions
Yes	QES automatically replaces the failed disk with a spare disk and then starts rebuilding the RAID group. The status of the RAID group changes to `rebuilding`, and then changes back to `Ready` after rebuilding is completed.
No	You must replace the failed disk immediately. QES starts rebuilding the RAID group after detecting the new working disk.

Shared Folders

A QES shared folder is a dedicated volume that contains one shared folder. Each shared folder is created from the storage space of a storage pool. Shared folders enable users to store data on the NAS and allow connected clients to access the stored data. To create and configure shared folders, go to **Storage Manager** > **Storage Space** .



Creating a Shared Folder

1. Go to **Storage Manager** > **Storage Space** .
2. Select **Create** > **New Shared Folder** .
3. Specify a shared folder name.
   - The name can be in any Unicode language.
   - The maximum length is 64 bytes. In English this equals 64 characters.
   - The following special characters are not allowed: @ " + = / \ : | * ? < > ; [ ] % , ` ' non-breaking space
   - The last character cannot be a period (.) or space.
   - The first characters cannot be a space.

Tip
The **shared path** and **NFS path** show you how to access the folder using SMB and NFS. These paths are for reference only. On dual controller ES-NAS, there will be two separate paths for storage controller A and B.

4. Optional: Specify a description.
5. Select a storage pool.
   The shared folder will exist in this pool, and use its storage space.
6. Optional: Configure storage settings.

Setting	Description
Thin provision	In thin provisioning, QES allocates storage pool space for this shared folder while writing data instead of while creating the folder. A thin provisioned folder can be over-allocated, which means that its maximum capacity can be 20 times larger than the amount of free space in the parent storage pool. By default, this option is enabled. **Important** Enabling thin provisioning may may decrease read and write speeds in shared folders.
Folder quota	The folder quota determines the amount of data that the folder can store. If folder quota is not enabled, the capacity of the shared folder will be equal to that of the parent storage pool.
Compression	QES tries to reduce the size of the shared folder by compressing the data in it. Enabling this feature consumes additional CPU resources.
Deduplication	QES reduces the amount of storage needed by eliminating duplicate copies of repeated data. There are three hash algorithm options. • SHA256: A common algorithm which belongs to the NIST SHA-2 family. • SHA512: This algorithm can take advantage of 64-bit architecture. Performance is 50% faster than SHA-256 on 64-bit hardware. • Skein: A high-performance algorithm which belongs to the NIST SHA-3 family. Performance is 80% faster than SHA256. This is the default option in QES. **Warning** Before QES 1.1.3, the default deduplication algorithm was `SHA256`. If you update a pre-QES 1.1.3 NAS to QES 1.1.3 or later and then change the deduplication algorithm to `SHA512` or `Skein`, data might become inaccessible .
SSD cache	QES adds data from this folder to the SSD cache to improve read performance.

Setting	Description
Performance profile	Specify how the shared folder will be used. Each option results in a different record size, optimizing performance for the specified application. • Generic (Default, 128k) • VMware (4k) • Custom (Choose from: 8k, 16k, 32k, 64k, 128k) **Tip** Select `Generic` if you are unsure of which option to choose.
Storage services	You can allow or deny folder access from clients that use the following network services: • CIFS/SMB (Windows, Mac) • NFS (Linux) • FTP/FTPS

7. Configure access permissions to this folder.
   You can grant read-only access, read/write access, or deny access to NAS users or user groups. By default, only the QES admin account can access a shared folder.
8. Optional: Configure advanced settings.

Setting	Description
Hidden Folder	Hide the shared folder from Microsoft Windows clients. The folder can still be accessed using its full path, for example: \\NAS_IP\share_name.
Lock File (Oplocks)	Opportunistic lock (Oplocks) is a Windows file locking mechanism that facilitates caching and access control to improve performance. This feature is enabled by default and should only be disabled in networks where multiple users simultaneously access the same files.
Synchronous I/O	Users can select the ZFS Intent Log I/O mode to improve data consistency or performance. There are three modes: • Always: All I/O transactions are treated as synchronous and are always written and flushed to a non-volatile storage (such as a SSD or HDD). This option gives the best data consistency, but might have a small impact on performance. This is the default option on dual-controller ES NAS. • Standard: QES uses synchronous I/O or asynchronous I/O based on the application and the type of I/O request. This is the default option on single controller ES NAS. • Disabled: All I/O transactions are treated as asynchronous. This option gives the highest performance, but has a higher risk of data loss in the event of a power outage. Ensure that a UPS (uninterrupted power supply) is installed when using this option.

Setting	Description
Recycle Bin	Enable the network recycle bin for this shared folder. Files can be recovered from the recycle bin after being deleted. Selecting **Restrict the access of Recycle Bin to administrators only for now** means that only NAS administrators can recover deleted files. **Tip** To enable this option you must first enable the network recycle bin at **Control Panel** > **Network Services** > **Network Recycle Bin** > **Enable Network Recycle Bin** .
Path	This shows the UNIX file system path to the folder. It is for reference only and cannot be modified.
Record Size	Users can set the record size for this shared folder. The default is 128k.

9. Optional: Enable and configure WORM (Write once read many).
   WORM prevents anyone from modifying data after it has been written to the shared folder. This ensures that files cannot be tampered with.

Setting	Description
Type	• Enterprise: Users can delete the shared folder. • Compliance: Users cannot delete the shared folder. An administrator must remove the storage pool to delete the WORM shared folder.
Retention	Limit how long WORM applies to files. Files can be modified after the specified retention period is reached.

10. Enable folder encryption.
    QES encrypts the folder using 256-bit AES encryption. Encrypted folders can be locked and unlocked using a password or an encryption key file.

Important
You cannot change the folder path if encryption is enabled.

    a. Select **Encryption**.

    b. Specify an encryption password.
       The password must contain 8 to 16 characters, and can be any combination of letters, numbers and special characters. Spaces are not allowed.

Warning
If you forget this password, the shared folder will become inaccessible and all data will be lost.

    c. Optional: Select **Save encryption key**.
       Saving a local copy of the encryption key enables QES to automatically unlock and mount the encrypted shared folder when the NAS starts up. If the encryption key is not saved, you must specify the encryption password whenever the NAS restarts.

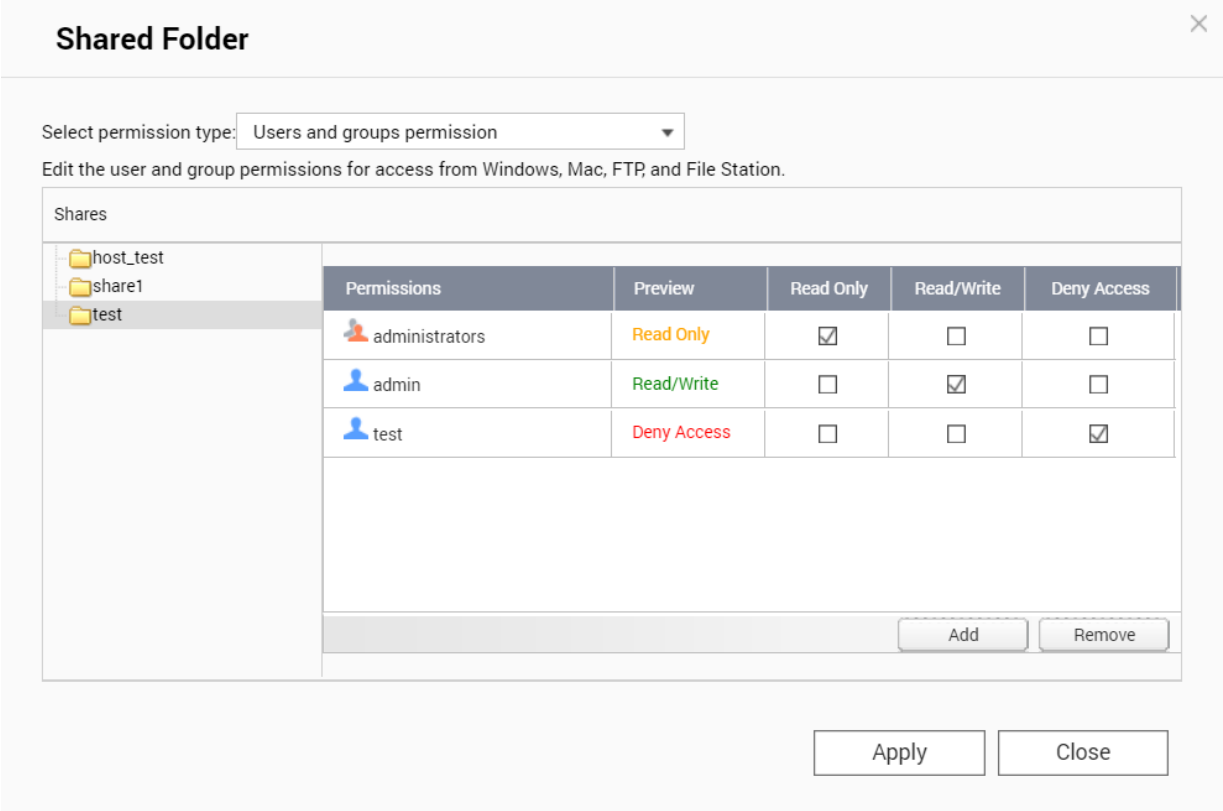
Warning
Storing the encryption key on the NAS can result in unauthorized access to data if the entire NAS is stolen.

11. Click **Create**.

Shared Folder Permissions

This screen enables you to assign folder access permissions for three different sets of users.

Permissions	Applies To
User and group permissions	All NAS users
NFS host access	Users accessing the NAS using NFS
Microsoft networking host access	Users accessing the NAS using SMB



Configuring User and Group Permissions

1. Go to **Storage Manager** > **Storage Space** .
2. Select a shared folder.
   The **Shared Folder Manager** window opens.
3. Click **Permissions**.
   The **Shared Folder Permissions** window opens.
4. Ensure **Users and groups permission** is selected in **Select permission type**.
5. Select a shared folder.
6. Specify shared folder access permissions for each user and group.

Permissions	Abbreviation	Description
Read/Write	RW	Users can view, modify, add and delete files and folders.
Read Only	RO	Users can view files and folders.
Deny Access	Deny	Users cannot access the folder.

Shared folder user and group permissions override permissions set at the file system level. Setting deny access permissions on this screen will prevent a user from accessing any sub-folders even if you set read/write permissions on the sub-folders in File Station.

Tip
To specify read-only permissions on the root of a shared folder and read/write permissions on its sub-folders, first set the user and group permissions to read/write. Then set the root folder to read-only at the file system level using File Station.

7. Optional: Click **Add** to add a new user or group permission.
8. Optional: Click **Remove** to remove a user or group permission.

Tip
You can use the following keyboard shortcuts.

- Selecting multiple users: Press and hold the SHIFT key.
- Selecting a range of users: Press and hold the CTRL key.

Configuring NFS Host Access Permissions

1. Go to **Storage Manager** > **Storage Space** .
2. Select a shared folder.
   The **Shared Folder Manager** window opens.
3. Click **Permissions**.
   The **Shared Folder Permissions** window opens.
4. Select **NFS host access**.
5. Select a shared folder.
6. Configure the following permission settings.

Setting	Description
Support NFSv4 ACL Inheritance	Deselecting this option disables NFSv4 ACL inheritance and enables umask settings.

Setting	Description
Enable Map_Root and Map_All	Users that access shared folders using NFS can use the permissions associated with their NAS accounts. This can cause security risks, especially if a user has root privileges. Selecting this option allows you to restrict permissions of users that access the folder using NFS. Choose from: • Map_Root: The root user receives the specified user and group permissions. • Map_All: All users receive the specified user and group permissions.

7. Configure NFS host access permissions.

   a. Select access permissions for all NFS hosts.

Permission	Description
No limit	Users can view, modify, add and delete files and folders.
Read Only	Users can view files and folders.
Deny Access	Users cannot access the folder. This is the default permission for NFS hosts.

   b. Optional: Add a new NFS host.

   c. Select an NFS host in the table.

   d. Optional: Select **All hosts can access the shared folder**.
   QES applies the selected permission to all NFS hosts that attempt to access the folder.

8. Click **Apply**.

Configuring SMB Host Access Control

Windows and Mac hosts use SMB to access shared network folders. Linux hosts can also use SMB using Samba. By default all SMB hosts can access all SMB shared folders.

1. Go to **Storage Manager** > **Storage Space** .
2. Select a shared folder.
   The **Shared Folder Manager** window opens.
3. Click **Permissions**.
   The **Shared Folder Permissions** window opens.
4. Select **Microsoft Networking host access**.
5. Deselect **All hosts can access the shared folder**.
6. Optional: Click **Create Host** to add a new host IP address or IP range.
7. Select the hosts that are allowed to access this folder.
8. Click **Apply**.

Shared Folder Management

Deleting a Shared Folder

1. Go to **Storage Manager** > **Storage Space** .
2. Select a shared folder.
   The **Shared Folder Manager** window opens.
3. Select **Actions** > **Remove** .
   A confirmation message appears.

Warning
All data in the shared folder will be deleted.

4. Click **Apply**.

Modifying Shared Folder Settings

1. Go to **Storage Manager** > **Storage Space** .
2. Select a shared folder.
   The **Shared Folder Manager** window opens.
3. Select **Actions** > **Edit Properties**
   The **Shared Folder Properties** window opens.
4. Modify shared folder settings.
   For details on folder settings, see Creating a Shared Folder.

Important
Disabling deduplication or compression only affects new data being saved to the folder. Existing data is not undeduplicated or uncompressed.

5. Click **Apply**.

Shared Folder Encryption

QES can encrypt shared folders with 256-bit AES encryption, which protects data from unauthorized access if individual drives or the entire NAS are stolen. Users must specify the encryption password to access encrypted shared folders.

Important
You can only enable encryption during the folder creation process. For details, see Creating a Shared Folder.

Shared Folder Access

Mapping a Shared Folder on a Windows Computer

1. Perform the following actions, depending on your Windows version.

Windows Version	Action

Windows 7	**a.** Click **Start**. **b.** Click **Computer**.
Windows 10	**a.** Press `Windows Key + E`. **b.** Select **This PC** from the left pane.

2. Click **Map Network Drive**.
   The **Map Network Drive** window opens.
3. Select a drive letter.
4. Specify the SMB path to the shared folder.
   The path will be either `\\NAS_NAME\FOLDER_NAME` or `\\NAS_IP_ADDRESS\FOLDER_NAME`.
5. Click **Finish**.
6. Optional: Specify your NAS user name and password if prompted.

Windows maps the shared folder to the specified drive letter. The drive can be accessed using Windows Explorer.

Mounting a Shared Folder on a Mac Computer

1. Open **Finder**.
2. Select **Go** > **Connect to Server** .
3. Specify your NAS address.
   The address must include the sharing protocol followed by the NAS data interface IP address.

Sharing Protocol	Address Format
SMB	smb://NAS IP Address
NFS	nfs://NAS IP Address

4. Click **Connect**.
5. Specify your NAS user name and password.
6. Select a shared folder.
7. Click **OK**.

MacOS mounts the shared folder.

Mounting a Shared Folder on a Linux Computer

1. Open a terminal with root privileges.
2. Run the following command. mount <NAS Ethernet Interface IP>:/share/<Shared Folder Name> <Directory to Mount>

Note
A dual controller QES NAS has two kinds of network interface:

- Management interface
- Ethernet interface (dedicated to data transfer)

> You can connect to the Ethernet interface on either controller.

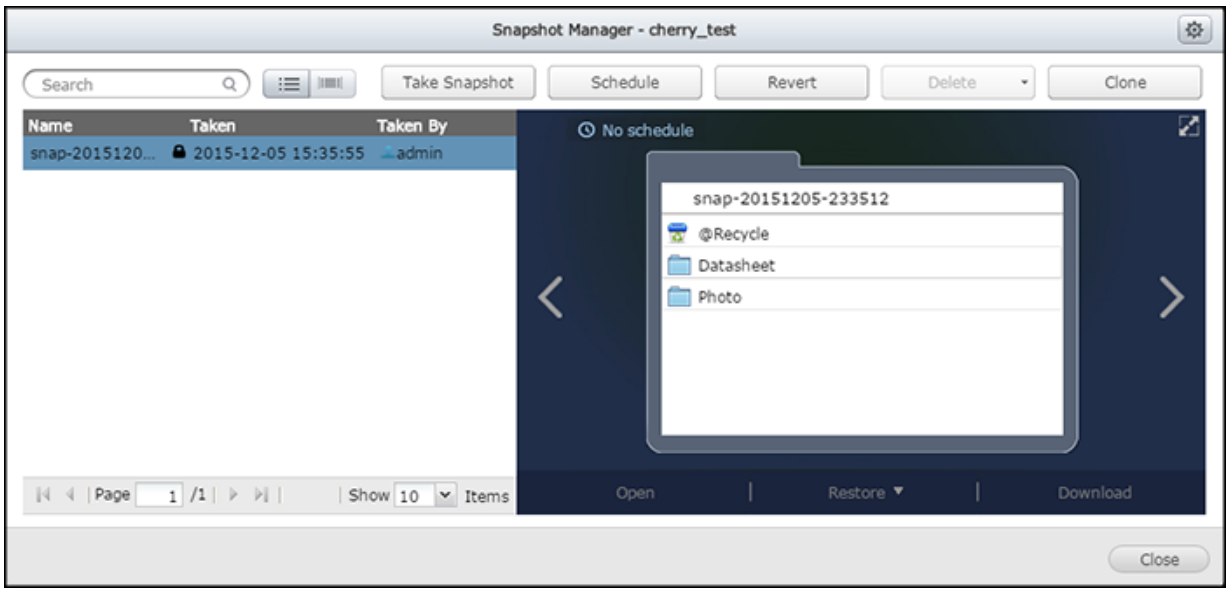
If the NAS ethernet interface IP address is 192.168.0.42 and you want to connect to a shared folder "public" under the /mnt/pub directory, use the following command: mount -t nfs 192.168.0.42:/share/public /mnt/pub

3. Specify your NAS username and password.

You can connect to the shared folder using the mounted directory.

Snapshots

Snapshots protect data by recording the state of a shared folder at a specific point in time. You can restore data to a previous state if it is unintentionally modified or deleted. You can also use snapshots to back up data to another NAS using SnapSync.



Snapshot Creation

Taking a Snapshot

1. Go to **Storage Manager** > **Storage Space** .
2. Identify a shared folder or LUN, and then click the corresponding .
   The **Snapshot Manager** window opens.
3. Click **Take Snapshot**.
4. Specify a name.
5. Specify a retention time.

Setting	User Action
Keep For	Specify the number of days, weeks, or months that QES retains the snapshot before it is deleted.

Keep this snapshot permanently	Select this option to retain the snapshot indefinitely. **Note** QES will still delete the snapshot when the two following conditions are met: • On the Global Settings screen, you selected **Global Settings** > **Delete the oldest snapshots when a storage pool is full** . • Storage space is low.

6. Select the snapshot type.
   This option is only available for iSCSI LUNs.

Crash consistent	The snapshot records the state of the data on the LUN.
Application consistent	The snapshot records the state of data and applications on the LUN. The iSCSI host flushes data in memory to the LUN before QES takes a snapshot. If VMware vCenter is using the LUN, vCenter takes a virtual machine snapshot. This option is only available for VMware vCenter and Volume Shadow Copy Service (VSS) aware applications that are running on Windows servers. You must install the QNAP Snapshot Agent on the iSCSI initiator. For details, see QNAP Snapshot Agent.

7. Click **OK**.

Configuring a Snapshot Schedule

Configure a snapshot schedule to ensure that QES takes snapshots at regular intervals. You can configure a separate schedule for each shared folder and LUN.

1. Go to **Storage Manager** > **Storage Space** .
2. Identify a shared folder or LUN, and then click the corresponding .
   The **Snapshot Manager** window opens.
3. Click **Schedule**.
   The **Schedule Snapshot** window opens.
4. Select **Enable schedule**.
5. Specify how often a snapshot will be taken.
6. Specify the time that the snapshot will be taken.
7. Optional: Specify a retention time.
   QES automatically deletes the snapshot after the specified period elapses.
8. Click **OK**.

Snapshot Management

Restoring Files and Folders from a Snapshot

Important
You cannot restore files and folders from a LUN snapshot.

1. Go to **Storage Manager** > **Storage Space** .
2. Identify a shared folder or LUN, and then click the corresponding .
   The **Snapshot Manager** window opens.
3. Select a snapshot.
4. Select a file or folder.

Tip
If the file preview window is not visible, click .

5. Select a restore action.

Restore	QES restores the file or folder to its original location. If the file or folder still exists on the NAS then it will be overwritten. **Warning** All changes made after the snapshot was created will be lost.
Restore to	QES restores the file or folder to a different location on the NAS.
Download	You can download the file or folder to your computer. QES packages folders in a ZIP file for downloading.

Reverting a Shared Folder or LUN

Snapshot revert restores all data from a shared folder or LUN to the state when the snapshot was taken. Reverting a snapshot is significantly faster than restoring files and folders from a snapshot.

Important
You must unmap an iSCSI LUN before reverting it.

1. Go to **Storage Manager** > **Storage Space** .
2. Identify a shared folder or LUN, and then click the corresponding .
   The **Snapshot Manager** window opens.
3. Select a snapshot.
4. Click **Revert**.
   A confirmation message appears.

Warning
All changes made to files and folders after the snapshot was created will be lost.

5. Click **OK**.

Cloning a Shared Folder or LUN

Cloning involves creating an exact copy of a shared folder or LUN. Before proceeding, you must take a snapshot of the shared folder or LUN that you want to clone. For details, see Taking a Snapshot.

1. Go to **Storage Manager** > **Storage Space** .
2. Identify a shared folder or LUN, and then click the corresponding  .
   The **Snapshot Manager** window opens.
3. Select a snapshot.
4. Click **Clone**.
5. Optional: Specify a name for the cloned shared folder or LUN.
6. Optional: Map the iSCSI LUN to an iSCSI target.
7. Click **OK**.

The cloned volume or LUN appears in **Storage Manager** > **Storage Space** .

Deleting Snapshots

1. Go to **Storage Manager** > **Storage Space** .
2. Identify a shared folder or LUN, and then click the corresponding  .
   The **Snapshot Manager** window opens.
3. Select a snapshot.
4. Click **Delete**.
5. Select a delete option.

Option	Description
Delete	QES deletes the selected snapshot.
Delete all	QES deletes all snapshots of the selected shared folder or LUN.

Configuring Snapshot Global Settings

1. Go to **Storage Manager** > **Storage Space** .
2. Select a shared folder.
   The **Shared Folder Manager** window opens.
3. Click **Snapshot** > **Snapshot Manager** .
   The **Snapshot Manager** window opens.
4. Click  .
   The **Snapshot Global Settings** window opens.
5. Select **Make snapshot directory (@Snapshot) visible**.
   QES mounts all snapshots in a folder called @Snapshot in the top-level shared folder. All users have read-only access to this snapshot folder.

Important
This setting only applies to the current shared folder.

QNAP Snapshot Agent

QNAP Snapshot Agent enables QES to take application-consistent snapshots of iSCSI LUNs on VMware or Microsoft servers. Application-consistent snapshots record the state of running applications, virtual machines, and data. When QES takes a LUN snapshot, QNAP Snapshot Agent triggers the following actions:

- Windows: The server flushes data in memory, logs, and pending I/O transactions to the LUN before the snapshot is created.
- VMware: The server takes a virtual machine snapshot.

For more information on using Snapshot Agent, see the following QNAP application note: https://files.qnap.com/news/pressresource/datasheet/Create_Microsoft_Hyper-V_Backups_Using_QNAP_Snapshot_Agent_and_VSS_Hardware_Provider(English).pdf.

Viewing Registered Snapshot Agent Servers

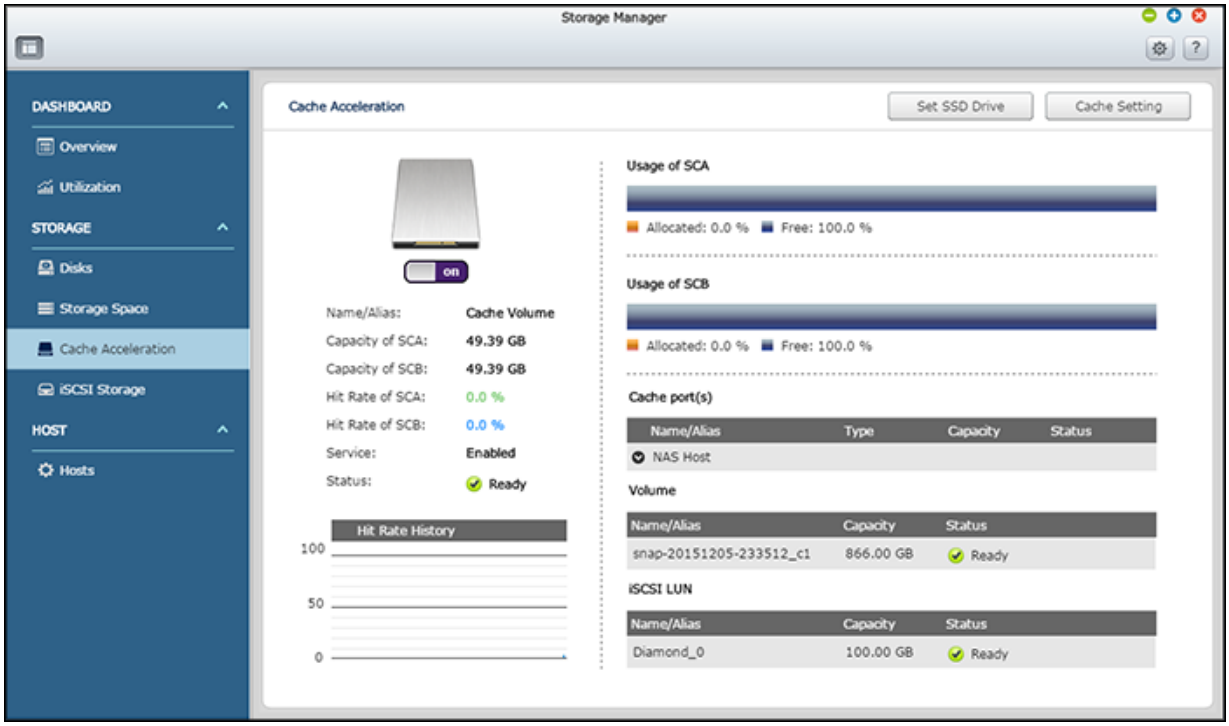
1. Go to **Storage Manager** > **iSCSI Storage** .
2. Select **Snapshot** > **Snapshot Agent** .
   The **Snapshot Agent** window opens.
3. Optional: Un-register a server.
   a. Select a server.
   b. Click **Remove**.

Cache Acceleration

Cache Acceleration enables you to create an SSD cache for improving the read performance of the NAS.

Important
QES uses the SSD cache for read-caching only.

- Dual-controller ES series NAS devices perform write caching using hardware NVRAM.
- TES series NAS devices offer RAM write cache protection (write log) when you add an SSD to the SSD cache. The write log ensures data integrity and also helps increase write performance, but it is not a write cache.



Adding an SSD to the SSD Cache

For details on compatible SSDs, see www.qnap.com/compatibility.

1. Go to **Storage Manager** > **Cache Acceleration** .
2. Click **Set SSD**.
3. Select one or more SSD drives.
4. Optional: Enable RAM write cache protection (Write Log).
   When enabled, QES saves data in the RAM write cache to the SSD cache for additional data protection. This feature is only available on TES series NAS and requires an even number of SSDs. If an SSD fails, QES automatically disables the write log.
5. Click **OK**.
   A confirmation message appears.

Warning
All data except for system partition data will be deleted.

6. Click **OK**.

QES uses the selected drives as SSD cache drives and enables the cache acceleration service if disabled.

Removing an SSD from the SSD Cache

1. Go to **Storage Manager** > **Cache Acceleration** .
2. Click **Set SSD**.
3. Deselect one or more SSD drives.

Important
On TES series NAS devices, RAM write cache protection requires an even number of SSDs. Removing an odd number of SSDs automatically disables this feature.

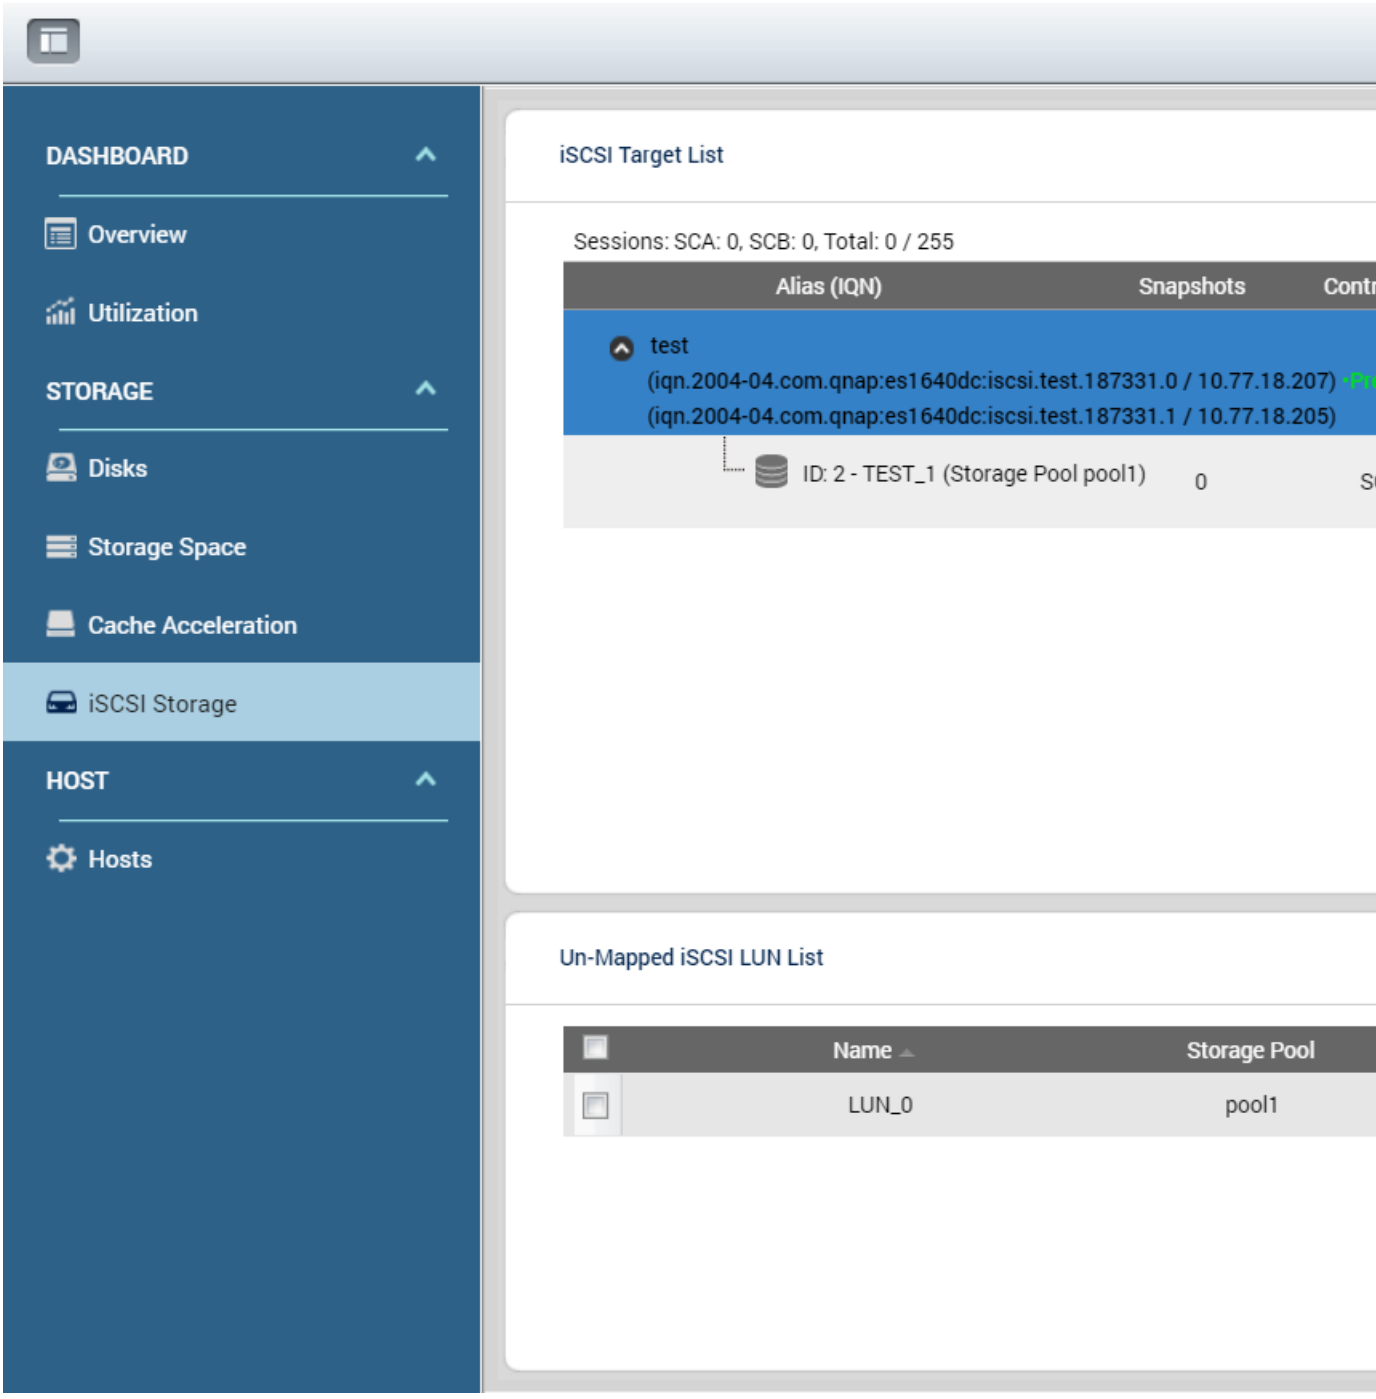
4. Click **OK**.
   A confirmation message appears.
5. Click **OK**.

Configuring Cached Shared Folders and LUNs

1. Go to **Storage Manager** > **Cache Acceleration** .
2. Click **Set Caching Storage**.
3. Select the shared folders and LUNs that are allowed to use the SSD cache.
4. Optional: Configure **Bypass Prefetch Data**.
   When enabled, QES does not record large-block sequential I/O operations such as video streaming in the SSD cache. This is the default SSD cache behavior. When disabled, QES records large block sequential I/O operations in the SSD cache. This requires more space and CPU resources.
5. Click **Finish**.

iSCSI Storage

QES supports iSCSI (Internet Small Computer System Interface) for server clustering and virtualized environments.



Tip
You can find information on iSCSI configuration and optimization on the QNAP website. Go to www.qnap.com/download, specify your TES or ES NAS model, and then click **Application Notes**.

iSCSI Overview

QES supports blocked-based iSCSI LUNs with the following features:

- VAAI full copy
- VAAI block zeroing
- VAAI hardware assisted locking
- Thin provisioning
- Space reclamation (with VAAI or from Windows 2012 or Windows 8)
- Microsoft ODX
- LUN snapshot
- LUN SnapSync

QES supports a maximum of 255 iSCSI targets and 1,024 LUNs.

Getting Started with iSCSI

iSCSI enables computers, servers, and virtual machines to use storage from your ES NAS as remote disks. Clients can partition, format, and use remote disks exactly like local disks.

1. Create an iSCSI target on the NAS.
   For details, see Creating an iSCSI Target.
2. Create an iSCSI LUN on the NAS.
   QES creates LUNs using storage pool space. For details, see Creating an iSCSI LUN.
3. Map the iSCSI LUN to the iSCSI target.
   After creating an iSCSI LUN, QES shows a list of targets that you can map it to. You can map multiple LUNs to one target. You can also create a new target and a new mapped LUN in one task. For details, see Creating an iSCSI Target With a Mapped LUN.
4. Install an iSCSI initiator client on a server or virtual machine.
   This server or VM is called the iSCSI initiator.
5. Connect the iSCSI initiator to the iSCSI target on the NAS.
   The LUN appears as a disk volume in the iSCSI initiator OS. For details, see iSCSI Target Access.
6. Format the remote disk.

iSCSI Creation

Creating an iSCSI Target With a Mapped LUN

1. Go to **Storage Manager** > **iSCSI Storage** .
2. Click **Create**.
3. Select **iSCSI Target with a mapped LUN** and then click **Next**.
4. Click **Next**.
5. Specify a target name.
   QES appends the specified name to the iSCSI qualified name (IQN). IQNs are unique names used to identify targets and initiators.
   - Valid characters: 0 to 9, a to z, A to Z

- Length: 1 to 16 characters

6. Specify a target alias.
   An alias enables you to identify the target more easily.
   - Valid characters: 0 to 9, a to z, A to Z, underscore "_", hyphen "-"
   - Length: 1 to 32 characters
7. Optional: Enable CRC checksums.
   Initiators and targets communicate over TCP connections using iSCSI protocol data units (PDU). The sending device can send a checksum with each PDU. The receiving device uses this checksum to verify the integrity of the PDU, particularly in unreliable network environments. There are two checksum types, which can be enabled together or separately.

Checksum Type	Description
Data Digest	The checksum can be used to verify the data portion of the PDU.
Header Digest	The checksum can be used to verify the header portion of the PDU.

   The following options are available for each checksum type.

Option	Description
None	The target reports that it does not support checksums. CRC32C checksums must be disabled on connecting initiators.
crc32c	The target reports that checksums are required. CRC32C checksums must be enabled on connecting initiators.
none/crc32c	The target reports that checksums can be disabled or enabled. Connecting initiators can choose whether to use CRC32C or not.

8. Click **Next**.
9. Optional: Enable CHAP authentication.
   An initiator must authenticate with the target using the specified username and password.
   - Username
     - Length: 1 to 128 characters
     - Valid Characters: 0 to 9, a to z, A to Z
   - Password
     - Length: 12 to 16 characters
     - Valid characters: 0 to 9, a to z, A to Z
10. Optional: Enable mutual CHAP authentication.
    When enabled, both the initiator and the target must authenticate with each other. First, the initiator authenticates with the target using the CHAP authentication username and password. Second, the target authenticates with the initiator using the mutual CHAP username and password.
    - Username
      - Length: 1 to 128 characters
      - Valid characters: 0 to 9, a to z, A to Z, colon ":" , dot "." , dash "-"

- Password
  - Length: 1 to 128 characters
  - Valid characters: 0 to 9, a to z, A to Z, colon ":" , dot "." , dash "-"

11. Click **Next**.
12. Select the network interfaces that this target will use for data transmission.
13. Click **Next**.
14. Select the hosts that are allowed to access this target.
    Click the field in the **Access** column to change a host's access rights. You must select `All Access` for at least one host.
15. Click **Next**.
16. Configure the following LUN settings.

Setting	Description
LUN Name	• Valid characters: 0-9, a-z, A-Z, dash -, underscore _ • Length: 1 to 31 characters
LUN Allocation	• Thin Provisioning: QES allocates storage pool space to a LUN only when necessary. However, QES cannot save data to the LUN if the storage pool runs out of space. • Instant Allocation: QES allocates storage pool space when creating the LUN. This option is also known as Thick provisioning.
LUN Location	Select the storage pool that this LUN will be created in.
Capacity	Specify the maximum size of the LUN.
Alert threshold	QES will issue a warning notification when the percentage of used space on the LUN reaches the specified threshold.
Performance profile	You can specify how the LUN will be used. Each option results in a different record size, optimizing performance for the specified application. • Generic (Default, 64k) • Hyper-V • VMware • Database • Custom. Choose from: 8k, 16k, 32k, 64k, 128k. **Tip** Select `Generic` if you are unfamiliar with the technology.

Setting	Description
Synchronous I/O	Select the ZFS Intent Log (ZIL) sync setting to improve either data consistency or performance. There are three options: • Always: (Default). All I/O transactions are treated as synchronous and are always written and flushed to a non-volatile storage (such as a SSD or HDD). This option gives the best data consistency, but might have a slight impact on performance. • Standard: QES uses synchronous I/O or asynchronous I/O based on the application and the type of I/O request. • Disabled: All I/O transactions are treated as asynchronous. This option gives the highest performance, but has a higher risk of data loss in the event of a power outage. Ensure that a UPS (uninterrupted power supply) is installed when using this option.
SSD Cache	QES adds files from this LUN to the SSD read cache.
Deduplication	QES eliminates duplicate copies of data to reduce the required amount of storage space. The default algorithm is `Skein`. **Warning** Before QES 1.1.3, the default deduplication algorithm was `SHA256`. If you update a pre-QES 1.1.3 NAS to QES 1.1.3 or later and then change the deduplication algorithm to `SHA512` or `Skein`, data might become inaccessible .
Compression	QES compresses the data in a shared folder to reduce the folder size. Enabling this feature consumes additional CPU resources.
Enable Fast Clone	QES modifies the LUN metadata to quickly create a copy of the LUN.
Encryption	QES encrypts the LUN using 256-bit AES encryption. You must specify an encryption password. • Valid characters: All alphanumeric and special characters except spaces • Length: 8 to 16 characters You can also save a copy of the encryption key on the NAS.

17. Click **Next**, and then **Next** again.
18. Click **Finish**.

QES creates the LUN and the target.

Creating an iSCSI Target

1. Go to **Storage Manager** > **iSCSI Storage** .
2. Click **Create**.
3. Select **iSCSI LUN only**.

4. Click **Next**.
5. Specify a target name.
   QES appends the specified name to the iSCSI qualified name (IQN). IQNs are unique names used to identify targets and initiators.
   - Valid characters: 0 to 9, a to z, A to Z
   - Length: 1 to 16 characters
6. Specify a target alias.
   An alias enables you to identify the target more easily.
   - Valid characters: 0 to 9, a to z, A to Z, underscore "_", hyphen "-"
   - Length: 1 to 32 characters
7. Optional: Enable CRC checksums.
   Initiators and targets communicate over TCP connections using iSCSI protocol data units (PDU). The sending device can send a checksum with each PDU. The receiving device uses this checksum to verify the integrity of the PDU, particularly in unreliable network environments. There are two checksum types, which can be enabled together or separately.

Checksum Type	Description
Data Digest	The checksum can be used to verify the data portion of the PDU.
Header Digest	The checksum can be used to verify the header portion of the PDU.

   The following options are available for each checksum type.

Option	Description
None	The target reports that it does not support checksums. CRC32C checksums must be disabled on connecting initiators.
crc32c	The target reports that checksums are required. CRC32C checksums must be enabled on connecting initiators.
none/crc32c	

8. Click **Next**.
9. Optional: Enable CHAP authentication.
   An initiator must authenticate with the target using the specified username and password.
   - Username
     - Length: 1 to 128 characters
     - Valid Characters: 0 to 9, a to z, A to Z
   - Password
     - Length: 12 to 16 characters
     - Valid characters: 0 to 9, a to z, A to Z
10. Optional: Enable mutual CHAP authentication.

When enabled, both the initiator and the target must authenticate with each other. First, the initiator authenticates with the target using the CHAP authentication username and password. Second, the target authenticates with the initiator using the mutual CHAP username and password.

- Username
  - Length: 1 to 128 characters
  - Valid characters: 0 to 9, a to z, A to Z, colon ":" , dot "." , dash "-"
- Password
  - Length: 12 to 16 characters
  - Valid characters: 0 to 9, a to z, A to Z, colon ":" , dot "." , dash "-"

11. Click **Next**.
12. Select the network interfaces that this target will use for data transmission.
13. Click **Next**.
14. Select the hosts that are allowed to access this target.
    Click the field in the **Access** column to change a host's access rights. You must select `All Access` for at least one host.
15. Click **Next**, and then **Next** again.
16. Click **Finish**.

QES creates the iSCSI target.

Creating an iSCSI LUN

1. Go to **Storage Manager** > **iSCSI Storage** .
2. Click **Create**.
3. Select **iSCSI LUN only**.
4. Click **Next**.
5. Configure the following LUN settings.

Setting	Description
LUN Name	• Valid characters: 0-9, a-z, A-Z, dash -, underscore _ • Length: 1 to 31 characters
LUN Allocation	• Thin Provisioning: QES allocates storage pool space to a LUN only when necessary. However, QES cannot save data to the LUN if the storage pool runs out of space. • Instant Allocation: QES allocates storage pool space when creating the LUN. This option is also known as Thick provisioning.
LUN Location	Select the storage pool that this LUN will be created in.
Capacity	Specify the maximum size of the LUN.

Setting	Description
Alert threshold	QES will issue a warning notification when the percentage of used space on the LUN reaches the specified threshold.
Performance profile	You can specify how the LUN will be used. Each option results in a different record size, optimizing performance for the specified application. • Generic (Default, 64k) • Hyper-V • VMware • Database • Custom. Choose from: 8k, 16k, 32k, 64k, 128k. **Tip** Select `Generic` if you are unfamiliar with the technology.
Synchronous I/O	Select the ZFS Intent Log (ZIL) sync setting to improve either data consistency or performance. There are three options: • Always: (Default). All I/O transactions are treated as synchronous and are always written and flushed to a non-volatile storage (such as a SSD or HDD). This option gives the best data consistency, but might have a slight impact on performance. • Standard: QES uses synchronous I/O or asynchronous I/O based on the application and the type of I/O request. • Disabled: All I/O transactions are treated as asynchronous. This option gives the highest performance, but has a higher risk of data loss in the event of a power outage. Ensure that a UPS (uninterrupted power supply) is installed when using this option.
SSD Cache	QES adds files from this LUN to the SSD read cache.
Deduplication	QES eliminates duplicate copies of data to reduce the required amount of storage space. The default algorithm is `Skein`. **Warning** Before QES 1.1.3, the default deduplication algorithm was `SHA256`. If you update a pre-QES 1.1.3 NAS to QES 1.1.3 or later and then change the deduplication algorithm to `SHA512` or `Skein`, data might become inaccessible .
Compression	QES compresses the data in a shared folder to reduce the folder size. Enabling this feature consumes additional CPU resources.
Enable Fast Clone	QES modifies the LUN metadata to quickly create a copy of the LUN.

Setting	Description
Encryption	QES encrypts the LUN using 256-bit AES encryption. You must specify an encryption password. • Valid characters: All alphanumeric and special characters except spaces • Length: 8 to 16 characters You can also save a copy of the encryption key on the NAS.

6. Click **Next**.
7. Optional: Map the LUN to an existing target.
   a. Deselect **Do not map it to a target for now**.
   b. Select a target.
8. Click **Next**, and then **Next** again.
9. Click **Finish**.

QES creates the LUN.

iSCSI Management

iSCSI Targets and LUNs

You can view the list of targets and LUNs on the ISCSI Storage screen (**Storage Manager** > **iSCSI Storage**).

iSCSI Target Status

Status	Description
Ready	The target is accepting connections. No initiators are currently connected.
Connected	An initiator is connected to the target.
Offline	The target is not accepting connections.

iSCSI LUN Status

Status	Description
Enabled	The LUN is active and visible to authenticated initiators.
Disabled	The LUN is inactive and invisible to initiators.

Managing an iSCSI Target

1. Go to **Storage Manager** > **iSCSI Storage** .
2. Select a target.

3. Click **Action**.
4. Select an action.

Target Action	Description
Deactivate	QES disables a ready or connected target, and disconnects all connected initiators. For details on target statuses, see iSCSI Targets and LUNs.
Activate	QES enables an offline target.
Modify	QES opens the **Modify an iSCSI Target** window.
Delete	QES deletes the target and disconnects all connected initiators.
View Connections	QES displays the IP and IQN information of connected initiators.

Managing an iSCSI LUN

1. Go to **Storage Manager** > **iSCSI Storage** .
2. Select a LUN.

Tip
Double-click a target to see all mapped LUNs.

3. Click **Action**.
4. Select an action.

LUN Action	LUN Location	Description
Disable	iSCSI Target List	QES disables the LUN and disconnects all connected initiators.
Enable	iSCSI Target List	QES enables the disabled LUN.
Un-map	iSCSI Target List	QES unmaps a disabled LUN from the target, and moves the LUN to the **Un-Mapped iSCSI LUN** list.
Modify	iSCSI Target List Un-Mapped iSCSI LUN List	QES opens the **Modify an iSCSI LUN** window.
Map	Un-Mapped iSCSI LUN List	QES maps the LUN to a target.
Delete	Un-Mapped iSCSI LUN List	QES deletes the LUN, including all stored data.

Changing the Target of an iSCSI LUN

1. Go to **Storage Manager** > **iSCSI Storage**
2. Select a mapped LUN in the **iSCSI Target List**.

Tip
Double-click a target to view all of its mapped LUNs.

3. Select **Action** > **Disable** .

A confirmation message appears.

4. Click **OK.**
   QES disables the LUN.
5. Select **Action** > **Un-map** .
   QES unmaps the LUN from the target, and moves the LUN to the **Un-Mapped iSCSI LUN List**.
6. Select the LUN.
7. Select **Action** > **Map** .
   The **Map LUN to Target** window opens.
8. Select a target.
9. Click **Apply**.

QES maps the LUN to the new target.

Expanding an iSCSI LUN

1. Go to **Storage Manager** > **Storage Space**
2. Click the name or alias of an iSCSI LUN.
   The **Modify an iSCSI LUN** window opens.
3. Specify the new capacity of the LUN.
   You cannot decrease the capacity of a LUN.
4. Click **Apply**.

Configuring iSCSI Portal Settings

1. Go to **Storage Manager** > **iSCSI Storage** .
2. Click **Settings**.
   The **iSCSI Portal Management** window opens.
3. Configure the following settings.

Setting	Description
Enable iSCSI target service	Enable or disable the iSCSI service. Initiators cannot connect when the service is disabled.
iSCSI service port	View the port that iSCSI initiators connect to. This is for reference only and cannot be modified.
Enable iSNS	Specify the IP address of an iSNS server. SNS enables the automatic discovery and management of iSCSI initiators and targets within a TCP/IP network.

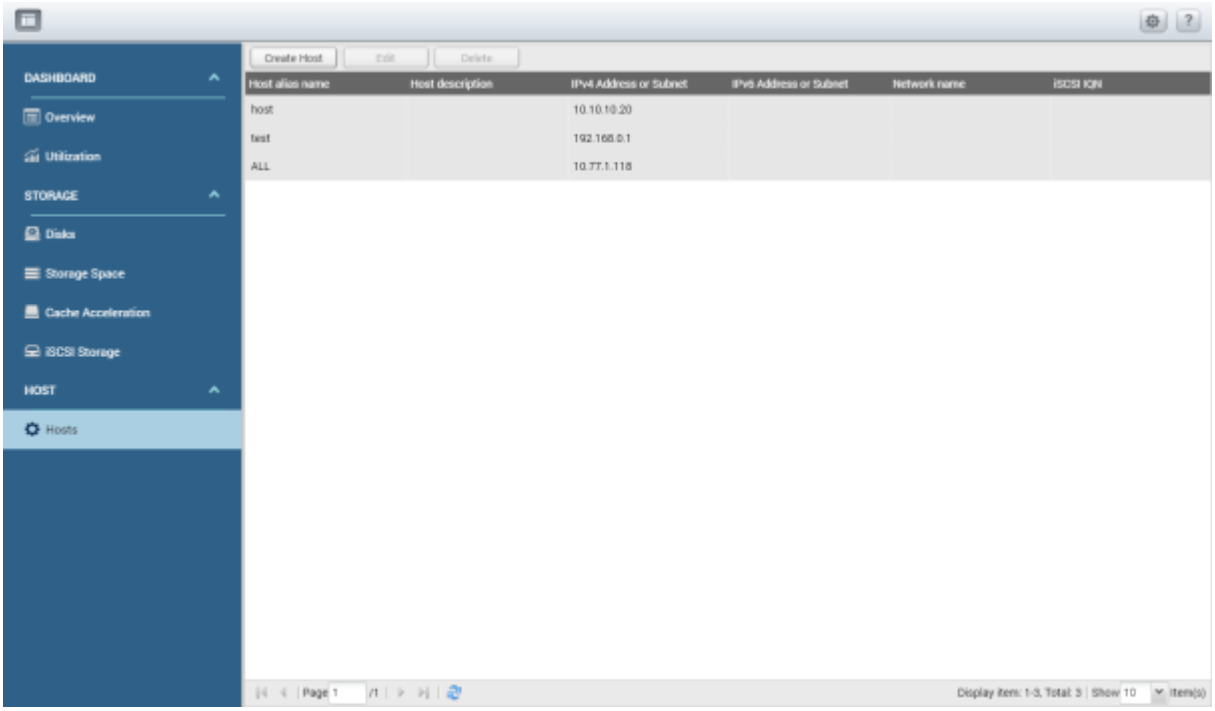
4. Click **Apply**.

iSCSI Target Access

For information on connecting to QES iSCSI targets from different operating systems, go to https://www.qnap.com/en/how-to/tutorial/storage-management.

Hosts

Hosts are computers that are authorized to connect to the NAS. You can configure access permissions for shared folders and iSCSI LUNs on the Hosts screen.



Adding a Host

1. Go to **Storage Manager** > **Hosts** .
2. Click **Create Host**.
   The **Create Host** window opens.
3. Specify an alias.
   The alias must consist of one or more characters from the following groups:
   - Letters: A to Z, a to z
   - Numbers: 0 to 9
   - Special characters: space " ", underscore "_", period ".", hypen "-"

   The alias cannot be "all".
4. Specify a description.
5. Specify at least one of the following identifiers.
   - IPv4 address
   - IPv4 subnet
   - IPv6 address
   - IPv6 subnet

- Network name
- iSCSI IQN

Tip
To obtain the iSCSI IQN of a client, perform the following actions.

- Microsoft Windows: Start Microsoft iSCSI Initiator, and then click **General**.
- VMware ESXi: Log into the vSphere client and then select an ESXi host. Go to **Configuration** > **Hardware** > **Storage Adapters** , select a vmhba, and then click **Properties**.

6. Click **Apply.**

QES adds the host to the list.

4. System

Go to **Control Panel** > **System** to configure the basic settings of the NAS.

General Settings

Settings	Description
System Administration	This screen allows you to specify the server name and ports, and configure secure connection settings.
Time	Time settings affect event logs and scheduled tasks. This screen allows you to specify the time zone and format, and configure the system date and time.
Daylight Saving Time (DST)	Daylight saving time (DST) settings apply only to regions that use DST. This screen allows you to either automatically adjust the system clock or to manually configure the settings.
Codepage	This screen allows you to select the language that the NAS uses to display file and directory information.
Login Screen	This screen allows you to customize the NAS login screen.

Configuring the System Administration Settings

1. Go to **Control Panel** > **System** > **General Settings** > **System Administration** .
2. Specify the following information:

Field	User Action
Server name	Specify a NAS name that contains up to 14 characters from any of the following groups: • Letters: A to Z, a to z • Numbers: 0 to 9 **Important** The server name cannot consist of numbers only. • Dashes (-) **Important** Ensure that dashes are not preceded or followed by a space.
System port	Specify the port that you will use to access the web interface. The default port is 8080.
Service port	Specify a port that client services and utilities can use to access the NAS.
Enable secure connection (SSL)	Select this option and specify a port number to allow users to connect to the NAS using HTTPS.
Force secure connection (SSL) only	Select this option to require all users to connect to the NAS using only HTTPS.

3. Click **Apply**.

Configuring the Time Settings

Important
You must configure the system time correctly to avoid the following issues.

- When using a web browser to connect to the NAS or save a file, the displayed time of the action will be incorrect.
- Event logs do not reflect the exact time that events occurred.
- Scheduled tasks run at the wrong time.

1. Go to **Control Panel** > **System** > **General Settings** > **Time** .
2. Select the time zone.
3. Specify the date and time format.
4. Select the time setting.

Option	User Action
Manual setting	Specify the date and time.
Synchronize with an Internet time server automatically	Ensure that your NAS is connected to the Internet, and then specify the following information: • **Server**: Name of the Network Time Protocol (NTP) server Examples: time.nist.gov, time.windows.com • **Time interval**: Number of hours or days in between each time synchronization task **Tip** To manually synchronize your NAS time with the NTP server, click **Update**.

5. Click **Apply**.

Configuring the Daylight Saving Time (DST) Settings

These settings are available for NAS users in regions that use Daylight Saving Time (DST). Users outside these regions can ignore these settings.

1. Go to **Control Panel** > **System** > **General Settings** > **Daylight Saving Time** .

Tip
If you do not want to manually configure the DST settings, select **Adjust system clock automatically for daylight saving time**, then click **Apply**. Otherwise, perform steps 2 to 5.

2. Select **Enable customized daylight saving time table**.
3. Perform any of the following actions:

Action	Steps
Add DST data	**a.** Click **Add Daylight Saving Time Data**. **b.** Specify a time period and the number of minutes to offset. **c.** Click **Apply**.
Edit DST data	**a.** Select a DST schedule from the table. **b.** Click  . **c.** Specify a time period and the number of minutes to offset. **d.** Click **Apply**.
Delete DST data	**a.** Select a DST schedule from the table. **b.** Click **Delete**. **c.** Click **OK**.

4. Select a DST schedule from the table.
5. Click **Apply**.

Configuring the Codepage Settings

All files and directories on the NAS use Unicode encoding. If your operating system or FTP client does not support Unicode, you must configure the following settings to properly view files and directories on the NAS.

For details on modifying FTP settings, see Configuring FTP Service Settings.

1. Go to **Control Panel** > **System** > **General Settings** > **Codepage** .
2. Select the language of your operating system.
3. Click **Apply**.

Configuring the Login Screen

1. Go to **Control Panel** > **System** > **General Settings** > **Login Screen** .
2. Specify the following information:

Field	User Action
Show firmware version	Select this option to display the QES firmware version.
Show the link bar	Select this option to display links to myQNAPCloud, QNAP Utility, and Feedback.
Background	Select a background image or fill color.
Logo	Select a logo.
Message	Specify a message that will appear on the login screen. You can use a maximum of 120 ASCII characters.

3. Optional: Click **Preview** to view the changes.
4. Click **Apply All.**

Network

IPv4

You can configure the following settings on this screen:

- IP address
- Default gateway
- DNS
- Port trunking
- VLAN

IP Address

ES series NAS devices have one management interface and two Ethernet interfaces on each controller. The management interface allows users to access and manage the NAS, but is also used by certain network protocols such as AD, NTP, and SNMP. The Ethernet interfaces are dedicated to data transfer for iSCSI and shared folders.

You can connect the Ethernet interfaces to different switches and configure the TCP/IP settings separately. The NAS acquires two IP addresses, which allow access from two different subnets. When using Qfinder Pro, the IP address of Ethernet 1 is displayed only in LAN 1 and the IP address of Ethernet 2 is displayed only in LAN 2.

Configuring IPv4 Settings

1. Go to **Control Panel** > **System** > **Network** > **IPv4** .
2. Identify the interface that you want to configure and then click  .
   The **TCP/IP - Property** window opens.
3. Select the network transfer speed of the interface.
   The default setting is **Auto-negotiation**, which means QES automatically detects and sets the transfer rate.
4. Configure the DHCP settings.

Setting	Description
Obtain the IP address settings automatically via DHCP	QES automatically obtains the IP address and network settings.
Use static IP address	You must specify the IP address, subnet mask, and default gateway. **Tip** In QES 1.1.3 and later, you can specify a default gateway for an interface that is part of a VLAN.

5. Enable jumbo frames.

Jumbo Frames are Ethernet frames that are larger than 1500 bytes. They are designed to enhance Ethernet networking throughput, and to reduce CPU usage when transferring large files.
QES uses standard Ethernet frames (1500 bytes) by default and supports the following jumbo frame sizes:

- 4074
- 7418
- 9000

Important

- Using jumbo frames requires a network speed of 1000 Mbps or higher.
- All connected network devices must enable jumbo frames and use the same MTU size.
- In QES, the selected jumbo frame size applies to the size of the data payload only. It does not include overhead data, such as the Ethernet, VLAN, and IP headers. This means that actual packet size will be larger than the selected value. Ensure that the MTU size on all connected network devices is higher than the selected jumbo frame size.

6. Click **Apply**.
   A confirmation message appears.
7. Click **OK**.

Configuring Port Trunking

Port trunking enables you to combine two or more Ethernet interfaces for increased bandwidth, load balancing and fault tolerance.

1. Go to **Control Panel** > **System** > **Network** > **IPv4** > **IP Address** .
2. Click **Port Trunking**.
   The **TCP/IP - Port Trunking** window appears.
3. Select two or more network interfaces that you want to add to the trunking group.

Important
Ensure that the ports are connected to the same switch.

4. Select a port trunking mode.
   The default option is **Loadbalance**.

Important
Some port trunking modes must be supported by your network switches. Selecting an unsupported mode may affect network performance or cause the network interface to freeze.

Mode	Description	Benefits	Requires Switch Support
Failover	QES sends and receives traffic using only the master port, which is the interface that was added first to the trunking group. If the master port becomes unavailable, QES uses the next active port.	• Redundancy • Fault tolerance	No

Mode	Description	Benefits	Requires Switch Support
Lacp (IEEE® 802.3ad Link Aggregation Control Protocol)	QES negotiates a set of aggregable links with the peer in to one or more Link Aggregated Groups (LAGs). Each LAG is composed of ports of the same speed, which are set to full-duplex operation. Traffic is balanced across the ports in the LAG with the greatest total speed. In the event of changes in physical connectivity, QES will quickly reconfigure the LAG. Incoming traffic is accepted by any active port.	• Redundancy • Fault tolerance • Greater bandwidth	Yes
Loadbalance	QES distributes outgoing traffic based on the current load on each interface, which is computed relative to the interface's speed. The current interface receives incoming traffic. If that interface fails, another interface takes over its MAC address.	• Redundancy • Fault tolerance • Increased throughput	No
Roundrobin	QES sends packets in sequential order from the first active port to the last.	• General purpose load balancing • Fault tolerance	Supports static trunking. Ensure static trunking is enabled on the switch.

5. Optional: Click  to specify a hashing method.

Hashing Method	Description
L2/Mac	MAC address
L3/IP	IP address
L4/Port	Port number

6. Click **Apply**.

Virtual LANs (VLANs)

A Virtual LAN (VLAN) enables a group of network devices to communicate as if they were attached to the same network switch, even if they are located in different physical locations. You can use VLANs to increase security and flexibility, and to decrease network latency and load.

QES supports a maximum of 512 VLANs.

Adding an Interface to a VLAN

Important
To use both VLANs and port trunking, you must configure port trunking first.

1. Go to **Control Panel** > **System** > **Network** > **IPv4** > **IP Address** .
2. Click **VLAN**.
   The **VLAN** window opens.
3. Click **Add**.
   The **Add a VLAN** window opens.

4. Specify a VLAN ID.
   You must specify a VLAN ID between 1 and 4094.
5. Select an interface.
   You can select a management or data interface.
6. Click **Apply**.

The VLAN appears in the VLAN list.

DNS Server

You can configure the NAS to obtain a DNS server address automatically, or manually specify the IP address of a DNS server.

Configuring IPv4 DNS Settings

1. Go to **Control Panel** > **System** > **Network** > **IPv4** > **DNS Server** .
2. Select one of the following options.

Option	User Action
Automatically obtain the IP address using DHCP.	Select **Obtain DNS server address automatically**.
Manually specify the IP address.	a. Select **Use the following DNS server address**. b. Obtain the IP addresses of the primary and the secondary DNS servers from your network administrator or ISP. c. Specify the following information: 1. Primary DNS server 2. Secondary DNS server **Important** QNAP recommends specifying at least one DNS server to allow URL lookups.

3. Click **Apply**.

Default Gateway

You must specify a network interface for the default gateway. All outgoing network traffic passes through this interface by default.

Configuring the IPv4 Default Gateway

1. Go to **Control Panel** > **System** > **Network** > **IPv4** > **Default Gateway** .
2. Under **Use the settings from**, select an interface that QES will use as the default route.
3. Add a static route.
   a. Click **Static Route**.
      The **Static Route** window opens.

b. Specify an IP or subnet address.

c. Select an interface.

d. Click **Apply**.
QES adds the IP address and interface to the routing table.

e. Close the **Static Route** window.

4. Click **Apply**.

IPv6

You can configure IPv6 settings on this screen. These settings allow hosts on the same subnet to automatically acquire IPv6 addresses from the NAS. The following NAS services support IPv6:

- CIFS/SMB
- NFS
- FTP
- iSCSI
- SNMP
- SSH

Configuring IPv6 Settings

1. Go to **Control Panel** > **System** > **Network** > **IPv6** > **IP Address** .
2. Select **Enable IPv6**.
3. Click **Apply**.
4. Go to **Control Panel** > **System** > **Network** > **IPv6** > **IP Address** .
5. Identify the interface you want to configure, and then click  .
The **IPv6 - Property** window appears.
6. Specify an IPv6 configuration.

Option	User Action
IPv6 Auto-Configuration	Select this option to automatically obtain the IPv6 settings if an IPv6-enabled router is available on the network.
Use static IP address	Select this option to use a static IP address. You must specify the following information: • IPv6 address • Prefix length **Tip** Obtain the prefix and the prefix length information from your ISP. • Default gateway IPv6 address

7. Click **Apply**.

Configuring IPv6 DNS Settings

1. Go to **Control Panel** > **System** > **Network** > **IPv6** > **DNS Server** .
2. Select one of the following options.

Option	User Action
Automatically obtain the IP address using DHCP.	Select **Obtain DNS server address automatically**.
Manually specify the IP address.	a. Select **Use the following DNS server address**. b. Obtain the IP addresses of the primary and the secondary DNS servers from your network administrator or ISP. c. Specify the following information: 1. Primary DNS server 2. Secondary DNS server **Important** QNAP recommends specifying at least one DNS server to allow URL lookups.

3. Click **Apply**.

Service Binding

NAS services run on all available network interfaces by default. Service binding enables you to allow or block services from specific network interfaces to increase security. You can bind services to one or more specific wired or wireless network interfaces.

Applying changes to service binding settings does not affect the ongoing connections of online users. On their next session, these users will only be able to connect to services using the specified network interfaces.

Configuring Service Binding

1. Go to **Control Panel** > **System** > **Network** > **Service Binding** .
2. Select **Enable Service Binding**.
   QES displays the available network interfaces.
3. Select the network interfaces that you want each service to use.
4. Click **Apply**.

Tip
If QES is unable to save the settings, click **Refresh** to list the current network interfaces on the NAS and then configure the settings again.

Configuring Proxy Server Settings

1. Go to **Control Panel** > **System** > **Network** > **Proxy** .

2. Select **Use a proxy server**.
3. Specify a proxy server and port number.
   All internet requests will pass through this proxy server.
4. Optional: Select **Authentication**.
5. Optional: Specify a username and password.
6. Click **Apply**.

Security

Allow/Deny List

Go to **Control Panel** > **System** > **Security** > **Allow/Deny List** to select the security level for all your NAS connections.

Important
After modifying security level settings, the new settings do not take effect until a client has created a new connection session (disconnected then reconnected)

Security Level	Option	Description
No Security	**Allow all connections**	The NAS can connect to all IP addresses and network domains.
Low	**Deny connections from the list**	The NAS cannot connect to all IP addresses or network domains on the IP block list.
High	**Allow connections from the list only**	The NAS can only connect to the IP addresses or network domains specified on the IP allow list.

Creating an IP Block List

1. Go to **Control Panel** > **System** > **Security** > **Security Level** .
2. Select **Deny connections from the list**.
3. Click **Add**.
   The IP configuration window appears.
4. Select **IPv4** or **IPv6**.
5. Specify an IP address, netmask, or IP range.
6. Click **Create**.

Tip
To remove an IP address, netmask, or IP range, select an entry from the table, then click **Remove**.

7. Click **Apply**.

Creating an IP Allow List

1. Go to **Control Panel** > **System** > **Security** > **Security Level** .
2. Select **Allow connections from the list only**.

3. Click **Add**.
   The IP configuration window appears.
4. Select **IPv4** or **IPv6**.
5. Specify an IP address, netmask, or IP range.
6. Click **Create**.

> **Tip**
> To remove an IP address, netmask, or IP range, select an entry from the table, then click **Remove**.

7. Click **Apply**.

Network Access Protection

Network access protection enhances system security. You can block an IP for a specific period or indefinitely after a specified number of unsuccessful connection attempts.

Configuring Network Access Protection

1. Go to **Control Panel** > **System** > **Security** > **Network Access Protection** .
2. Select **Enable Network Access Protection**.
3. Select the connection methods that you want to protect.
4. Specify the following information:
   - Time period
   - Maximum number of unsuccessful login attempts
   - Amount of time the IP will be blocked
5. Click **Apply**.

Certificate & Private Key

Secure Socket Layer (SSL) is a protocol used for secure data transfers and encrypted communication between web servers and browsers. To prevent receiving alert or error messages when accessing the web interface, upload an SSL certificate from a trusted provider.

Uploading an SSL Certificate and Private Key

> **Warning**
> The NAS supports only X.509 PEM certificates and private keys. Uploading an invalid security certificate may prevent you from logging onto the NAS through SSL. To resolve the issue, you must restore the default security certificate and private key.
> For details, see Restoring the Default SSL Certificate and Private Key.

1. Go to **Control Panel** > **System** > **Security** > **Certificate & Private Key** .
2. Specify an SSL certificate.

Tip
Click **View Sample** to view a valid SSL certificate sample.

3. Specify a private key.

Tip
Click **View Sample** to view a valid private key sample.

4. Click **Apply**.

Downloading the SSL Certificate and Private Key

1. Go to **Control Panel** > **System** > **Security** > **Certificate & Private Key** .
2. Click **Download Certificate**.
   The SSL certificate is downloaded.
3. Click **Download Private Key**.
   The private key is downloaded.

Restoring the Default SSL Certificate and Private Key

1. Go to **Control Panel** > **System** > **Security** > **Certificate & Private Key** .
2. Click **Restore Default Certificate & Private Key**.
   A confirmation message appears.
3. Click **OK**.
4. Click **Apply**.

Password Policy

Enabling password policy rules will force NAS users to set stronger, more secure passwords.

Configuring the Password Policy

1. Go to **Control Panel** > **System** > **Security** > **Password Policy** > **Password Strength** .
2. Select the password strength criteria.
   - A new password has to contain characters from at least three of the following classes: lowercase letters, uppercase letters, digits, and special characters.
   - No character in the new password may be repeated three (or more) times consecutively.
     Example: `AAA`.
   - The password must not be the same as the username, or username reversed.
     Example: Username: `user1`, password: `1resu`.
3. Click **Apply**.

Hardware

Reset Button

You must enable the configuration reset switch to perform a basic or advanced system reset using the NAS reset button. You can enable the configuration reset switch on the **General** screen (**Control Panel** > **System** > **Hardware** > **General**).

For details on reset options, see System Reset and Restore to Factory Default.

Buzzer

The buzzer inform you of any ongoing NAS operations or errors. You can enable this option on the **Buzzer** screen (**Control Panel** > **System** > **Hardware** > **Buzzer**).

Option	Description
System operations	The buzzer sounds when the NAS starts, shuts down, or updates the firmware.
System events	The buzzer sounds when errors or critical events occur.

Tip
You can find the full list of NAS events and their corresponding buzzer sounds in your NAS hardware user guide.

Smart Fan

Enabling the Smart Fan

1. Go to **Control Panel** > **System** > **Hardware** > **Smart Fan** .
2. Select **Enable smart fan (recommended)**.
3. Specify a smart fan setting.

Option	Description

Pre-set temperature	• The smart fan rotates at low speed when the system temperature is lower than 50°C (122°F).
	• The smart fan rotates at high speed when any of the following conditions occur.
	  • The system temperature is higher than or equal to 60°C (140°F).
	  • The CPU temperature is higher than or equal to 75°C (167°F).
	  • The hard drive temperature is higher than or equal to 52°C (125°F).

User-specified temperature	The smart fan rotates at low and high speed according to the temperature you specify.

4. Click **Apply All**.

Configuring the Fan Speed Manually

1. Go to **Control Panel** > **System** > **Hardware** > **Smart Fan** .

2. Select **Set fan rotation speed manually**.
3. Select a fan speed.
4. Click **Apply All**.

Backup Battery Unit (BBU)

You can schedule a learning cycle for the backup battery units (BBUs). A learning cycle is when a controller performs a battery calibration operation to determine the battery's condition. During this cycle, the system switches to write-through mode to protect data integrity.

In write-through mode, the NAS writes data directly to HDDs/SSDs instead of writing to the RAM first. This prevents data loss if a power outage occurs before the NAS finishes writing data. Because this process takes up memory, QNAP strongly recommends scheduling the learning cycle during off-peak hours.

Configuring the Backup Battery Unit (BBU) Settings

QNAP strongly recommends scheduling the learning cycle during off-peak hours.

1. Go to **Control Panel** > **System** > **Hardware** > **BBU** .
2. Select **Enable BBU learning schedule**.
3. Specify a learning cycle schedule.
4. Click **Apply All**.

Power

You can configure Wake-on-LAN (WOL) and specify the NAS behavior after a power outage.

Wake-on-LAN (WOL)

You can power on the NAS remotely using the Wake-on-LAN (WOL) protocol in Qfinder. This feature is enabled by default.

Important
If the power cable is disconnected when the NAS is powered off, WOL will not work until the NAS has been manually powered on.

Enabling or Disabling Wake-on-Lan (WOL)

1. Go to **Control Panel** > **System** > **Power** > **Wake-on-LAN (WOL)** .
2. Select **Enable** or **Disable**.
3. Click **Apply**.

Power Recovery

This feature allows you to configure the power on and off status of the NAS after a power outage.

Configuring the Power Recovery Settings

1. Go to **Control Panel** > **System** > **Power** > **Power Recovery** .

2. Select a power recovery setting.
   - Resume the server to the previous power-on or power-off status.
   - Turn on the server automatically.
   - The server should remain off.
3. Click **Apply**.

Notification

You can configure the NAS to send you alert messages when system events, such as warnings or errors, occur.

Email Alerts

You can configure an SMTP server so you can receive alert notifications through email.

Configuring an Email Server

1. Go to **Control Panel** > **System** > **Notification** > **Email** > **SMTP Server** .
2. Specify the following information.

Field	User Actions
Select an e-mail account	Select an email service. To use a custom SMTP server, see Configuring a Custom SMTP Server.
E-mail	Specify an email address that contains a maximum of 128 characters. This is for testing purposes.
Password	Specify the password of the email account. The password must contain a maximum of 128 characters.

3. Click **Apply**.

Configuring a Custom SMTP Server

1. Go to **Control Panel** > **System** > **Notification** > **Email** > **SMTP Server** .
2. Under **Select an e-mail account**, select **Custom**.
3. Specify the following information.

Field	User Actions
SMTP Server	Specify an SMTP server name such as `smtp.gmail.com`.
Port Number	Specify the port number for the SMTP server.
E-mail	Specify the email address that will receive QES notifications.
Username	Specify a username that contains a maximum of 128 characters. This field is optional.
Password	Specify a password that contains a maximum of 128 characters. This field is optional.

Field	User Actions
Secure connection	Select one of the following options. • **SSL**: Use SSL to secure the connection. • **TLS**: Use TSL to secure the connection. • **None**: Do not use a secure connection. QNAP recommends enabling a secure connection if the SMTP server supports it.

4. Click **Apply**.

SMS Alerts

Configuring the SMSC server settings allows QES to send SMS messages to specified phone numbers from the NAS. You can use the default SMS service or specify a custom service provider.

Configuring SMS Alerts from Clickatell Communicator/Central

Important
Clickatell Communicator/Central is for Clickatell accounts created before November 2016.

1. Go to **Control Panel** > **System** > **Notification** > **SMS** > **SMSC Server** .
2. Under **SMS Service Provider**, select **Clickatell -Communicator/Central**.
3. Specify the following information.

Field	User Action
SMS server login name	Specify your Clickatell username. The username must contain a maximum of 32 characters.
SMS server login password	Specify your Clickatell password. The password must contain a maximum of 32 characters.
API ID	Specify your Clickatell API ID.

4. Click **Apply**.

Configuring SMS Alerts from Clickatell SMS Platform

Important
Clickatell SMS Platform is for Clickatell accounts created from November 2016 onwards.

1. Go to **Control Panel** > **System** > **Notification** > **SMS** > **SMSC Server** .
2. Specify the following information.

Field	User Action
Alias	Specify your Clickatell alias.
API Key	Specify your Clickatell API key.

3. Click **Apply**.

Configuring SMS Alerts from a Custom Service Provider

1. Go to **Control Panel** > **System** > **Notification** > **SMS** > **SMSC Server** .
2. Under **SMS Service Provider**, select **Add SMS service provider**.
3. Specify the following information.

Field	Description
SMS service provider	Specify the name of the service provider. The name must contain a maximum of 32 characters.
URL template text	Specify the URL template text according to the format of your SMS service provider. Use the following replaceable URL template parameters: • `@@UserName@@`: Specify the username for this connection. • `@@Password@@`: Specify the password for this connection. • `@@PhoneNumber@@`: Specify the phone number where the SMS messages are sent. This parameter is required. • `@@Text@@`: Specify the text content of the SMS message. This parameter is required. **Important** You will not be able to receive SMS messages if the template text does not match the format used by your SMS service provider.

4. Click **Apply**.

Configuring Notification Settings

1. Go to **Control Panel** > **System** > **Notification** > **Alert Notification** .
2. Configure the alert notification settings.

Alert Notification	Description
System error alert	QES sends an alert notification through email or SMS when a system error occurs. System errors include failures in updating applications or enabling NAS features.
System warning alert	QES sends an alert notification through email when the following occur. • NAS resources, such as storage space and memory, are critically low. • The hardware behaves abnormally.

3. Configure the email notification settings.
   a. Verify that an SMTP server is configured.
   For details, see Email Alerts.
   b. Specify one to two email addresses that will receive notifications.

c. Click **Send a test E-mail**.

4. Configure the SMS notification settings.

   a. Verify that an SMSC server is configured.
   For details, see SMS Alerts.

   b. Select a country code.

   c. Specify one to two mobile phone numbers that will receive notifications.

   d. Click **Send a test SMS message**.

5. Click **Apply**.

Firmware Update

Checking for Live Updates

1. Go to **Control Panel** > **System** > **Firmware Update** > **Live Update** .
2. Perform one of the following actions:

Action	Description
Click **Check for Live Update**.	QES immediately checks for firmware updates.
Select **Automatically check if a newer version is available when logging into the NAS web administration interface**.	QES periodically checks for firmware updates. When an update is available, QES notifies you after you log in as an administrator.

3. Click **Apply**.

Updating the Firmware Manually

QNAP recommends backing up all data before updating the firmware.

1. Download the NAS firmware.

   a. Go to http://www.qnap.com/download.

   b. Read the release notes and confirm the following:

      - The NAS model and firmware version match.
      - Updating the firmware is necessary.

   c. Ensure that the product model and firmware version are correct.

   d. Download the firmware package.

   e. Extract the firmware image file.

2. Go to **Control Panel** > **System** > **Firmware Update** > **Firmware Update** .
3. Click **Browse** and then select the extracted firmware image file.
4. Click **Update System**.
5. Select a restart option.

Option	Description
Automatically apply new firmware and restart the system after update	The NAS automatically installs the new firmware and restarts the system once the update is complete.
Restart the system without interrupting services	This option is only available on dual-controller ES NAS models. The NAS passes control from the primary controller to the secondary controller, and then restarts. After restarting, the NAS passes control back to the primary controller. This process takes more time but ensures that all services stay running.

6. Click **OK**.
   The firmware update may require a few minutes or longer to complete, depending on system load and storage pool utilization.

Updating the Firmware Using Qfinder Pro

QNAP recommends backing up all data before updating the firmware.

1. Download the NAS firmware.
   a. Go to http://www.qnap.com/download.
   b. Read the release notes and confirm the following:
      - The NAS model and firmware version match.
      - Updating the firmware is necessary.
   c. Ensure that the product model and firmware version are correct.
   d. Download the firmware package.
   e. Extract the firmware image file.
2. In Qfinder Pro, select a NAS model.
3. Go to **Tools** > **Update Firmware** .

Tip
You can also right-click the NAS model in the list, and then click **Update Firmware**.

   The **Firmware Update** window appears.
4. Log in to the NAS as an administrator.
5. Click **Browse**, and then select a firmware image file.
6. Perform one of the following actions:

Action	Steps
Update a single NAS device	Select the NAS that you want to update.

Action	Steps
Update multiple NAS devices with the same model number	a. Select a NAS model from the list. b. Select **Update all the devices with the same model number within the network**. c. Select the NAS that you want to update.

7. Click **Start**.

Backup/Restore

Backing Up the System Settings

1. Go to **Control Panel** > **System** > **Backup/Restore** > **Backup/Restore Settings** .
2. Click **Backup**.
   QES exports the system settings as a BIN file.

Restoring the System Settings

Warning
If the backup files contain users or groups that already exist on the NAS, QES overwrites the duplicate information on the NAS.

1. Go to **Control Panel** > **Sytem** > **Backup/Restore** > **Backup/Restore Settings** .
2. Select a system settings BIN file.
3. Click **Restore**.

System Reset and Restore to Factory Default

QES provides different options for resetting or restoring the NAS to its default state.

System Reset	Description	User Action

Basic system reset	This resets the following settings to the default values without deleting user data.
	• System administrator password: admin
	• TCP/IP configuration:
	  • Obtain IP address settings automatically via DHCP
	  • Disable jumbo frames
	• System port: 8080 (system service port)
	• Security level: Low (Allow all connections)
	• LCD panel password: (blank)
	• VLAN: Disabled
	• Service binding: All NAS services can run on all available network interfaces.
		Use one of the following methods:
		• Basic system reset using QES
		  a. Go to **Control Panel** > **System** > **Hardware** > **Backup/Restore** > **Restore to Factory Default** .
		  b. Click **Reset Settings**.
		• Basic system reset using the reset button
		  a. Power on the NAS.
		  b. Press and hold the reset button for 3 seconds.

Advanced system reset	This performs a basic system reset and deletes all user and user group settings. It does not delete user data.	Use one of the following methods:
		• Advanced system reset using QES
		  a. Go to **Control Panel** > **System** > **Hardware** > **Backup/Restore** > **Restore to Factory Default** .
		  b. Click **Reset System Pool**.
		• Advanced system reset using the reset button
		  a. Power on the NAS.
		  b. Press and hold the reset button for 10 seconds.

Important
Back up all data before reinitializing the NAS.

Reinitialize	Description	User Action
Reinitialize NAS	This deletes the operating system and all stored data.	1. Go to **Control Panel** > **System** > **Backup/Restore** > **Restore to Factory Default** . 2. Click **Reinitialize NAS**.

Reinitialize	Description	User Action
Reinitialize QTS	This deletes all system settings and stored data, and then installs QTS. Only TES and TDS NAS models support this feature.	1. Go to **Control Panel** > **System** > **Backup/Restore** > **Restore to Factory Default** . 2. Click **Reinitialize QTS**. A confirmation message appears. 3. Click **OK**.
Reinitialize QES	This deletes all system settings and stored data, and then installs QES. Only TES and TDS NAS models support this feature.	1. Go to **Control Panel** > **System** > **Backup/Restore** > **Restore to Factory Default** . 2. Click **Reinitialize QES**. A confirmation message appears. 3. Click **OK**.

External Device

Uninterruptible Power Supply (UPS)

The NAS connects to uninterruptible power supply (UPS) devices that can protect your NAS from abnormal system shutdowns resulting from power disruptions.

Configuring an SNMP UPS

1. Ensure that the NAS is connected to the same network as the UPS.
2. Go to **Control Panel** > **System** > **External Device** > **UPS** .
3. Select **Enable UPS Support**.
4. Specify the IP address of the network UPS server.
5. Select a power failure option for the NAS.

Option	Description
Turn off the server after the AC power fails	The NAS shuts down after a specified time and then remains powered off.
Enter auto-protection mode after the AC power fails	The NAS stops all running services after a specified time and then resumes the stopped services after power is restored.

6. Specify the number of minutes the NAS should wait before performing the action that you selected.

Important
If the remaining UPS power during an outage is less than 15%, the NAS performs the selected action after 30 seconds regardless of the specified waiting time.

7. Click **Apply All**.

NAS Behavior During a Power Outage

The following table describes the possible scenarios during a power outage and the corresponding NAS behavior.

Phase	Scenario	NAS Behavior
Phase 1: From the start of the power outage until the end of the specified waiting time	The power outage starts.	The NAS detects the remaining UPS power.
	The UPS power is more than 15%.	Depending on your UPS settings, the NAS powers off or switches to auto-protection mode after the specified waiting time lapses.
	The UPS power is less than 15%.	After 30 seconds, the NAS automatically powers off or switches to auto-protection mode regardless of the specified waiting time.
	The power resumes.	The NAS remains operational.
Phase 2: From the end of your specified waiting time to when the UPS runs out of power	The power does not resume and the NAS is in auto-protection mode.	The NAS stops all running services. All shared folders and iSCSI LUNs become inaccessible.
	The power does not resume and the NAS is powered off.	The NAS remains powered off.
	The power resumes and the NAS is in auto-protection mode.	The NAS reboots and resumes its previous state.
	The power resumes and the NAS is powered off.	The NAS remains powered off.
Phase 3: From when the UPS device runs out power to when the power is restored	The power does not resume and the NAS is in auto-protection mode.	The NAS powers off.
	The power does not resume and the NAS is powered off.	The NAS remains powered off.
	The power resumes.	The NAS applies the specified power recovery settings. For details, see Configuring the Power Recovery Settings.

System Status

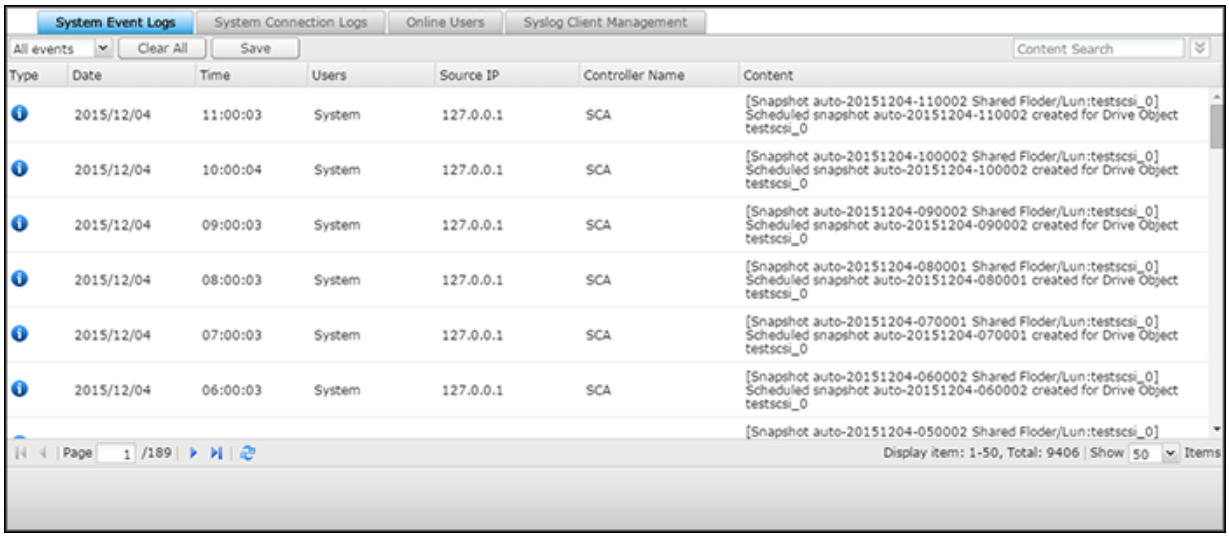
You can check the status of your NAS on the System Status screen (**Control Panel** > **System** > **System Status**).

Section	Description
Controller Information	This section displays the information (such as CPU and memory usage, storage pool usage, shared folders and LUNs) for each controller.
System Information	This section displays the system information (such as the server name, memory, firmware and system up time) for each controller.
Network Status	This section displays the current network settings and statistics for each network interface.

Section	Description
System Service	This section displays the current status of system services, such as Microsoft networking, NFS, FTP, and File Station.
Hardware Information	This section displays the basic NAS hardware information, such as CPU usage, memory, cache, and system fan speed.
Resource Monitor	This section displays the CPU usage, disk usage, and bandwidth transfer statistics of the NAS.

System Logs

You can view logs on the system logs screen at **Control Panel** > **System** > **System Logs** .



System Event Logs

QES stores a maximum of 10,000 event logs, including warnings, errors, and information messages. You can perform the following actions:

- Delete a single entry: Right-click on the log message.
- Delete all logs: Click **Clear All**.

System Connection Logs

QES can log the following events:

Protocol	Events
FTP, HTTP, HTTPS, iSCSI, and SMB	• Logging on and off • Accessing, creating, deleting, moving, and renaming files and folders
SSH	Logging on and off

You can perform the following actions:

Action	Steps
Record connection logs	Click **Start Logging**. **Note** Logging connections may affect file transfer speeds.
Select protocols to log	1. Click **Options**. 2. Select one or more protocols.
Archive connection logs when the number of logs reaches 10,000.	1. Click **Options**. 2. Select **When the number of log entries reaches 10,000, archive the connection logs.** 3. Select a folder for storing log files.

Online Users

This screen shows the users that are currently connected to the NAS, ordered by network service. You can right-click on a log to disconnect the IP connection and block the IP.

Syslog Client Management

Syslog is a standard for forwarding log messages on an IP network. You must enable this service to store event and connection logs on a remote syslog server.

You can also export logs to a CSV file. The following tables contain the supported connection types and actions with their respective codes.

Connection Type Codes

Code	Connection Type
0	UNKNOWN
1	SAMBA
2	FTP
3	HTTP
4	NFS
5	AFP
6	TELNET
7	SSH
8	ISCSI

Action Codes

Code	Action
0	UNKNOWN
1	DEL
2	READ
3	WRITE
4	OPEN

Code	Action
5	MKDIR
6	NFSMOUNT_SUCC
7	NFSMOUNT_FAIL
8	RENAME
9	LOGIN_FAIL
10	LOGIN_SUCC
11	LOGOUT
12	NFSUMOUNT
13	COPY
14	MOVE
15	ADD

5. Privilege

Go to **Control Panel** > **Privilege** to configure the privilege settings, disk quotas, and domain security on the NAS.

Users

Default User Accounts

User Account	Description
admin	This account can configure settings, create users, and install applications. You cannot delete this account.
Guest	Users without dedicated accounts can use this account to view and modify files. You cannot delete this account.

User Creation

Creating a Local User

1. Go to **Control Panel** > **Privilege** > **Users** .
2. Click **Create** > **Create a User** .
   The **Create a User** window appears.
3. Specify the following information:

Field	Description
Profile photo	Upload a profile photo for the user.
User Description (optional)	Specify a user description that contains a maximum of 50 characters.
Username	Specify a username that contains 1 to 32 characters from any of the following groups: • Letters: A to Z, a to z • Numbers: 0 to 9 • Multi-byte characters: Chinese, Japanese, Korean, and Russian • Special characters: . - _ ~ ! @ # $ % ^ & ( ) { } **Note** Usernames are not case-sensitive.
Password	Specify a password that contains 5 to 64 ASCII characters.
Phone number	Specify the user's phone number. The information is for your reference and is not used by QES.
Email (optional)	Specify an email address that will receive notifications from QES.

Field	Description
Send a notification mail to the newly created user	When selected, QES sends a message that contains the following information to the specified email address: • Username and password • URLs for connecting to the NAS

4. Specify the user groups the user belongs to.
   For details, see Editing a User's Groups.
5. Specify the user's shared folder permissions.
   For details, see Editing a User's Shared Folder Permissions.
6. Specify the user's application privileges.
   For details, see Editing Application Privileges.
7. Click **Create**.
   QES creates the local user account and adds it to the displayed list of users.

Creating Multiple Users

1. Go to **Control Panel** > **Privilege** > **Users** .
2. Click **Create** > **Create Multiple Users** .
   The **Multiple Users Creation Wizard** appears.
3. Click **Next**.
4. Specify the following information:

Field	Description
User Name Prefix	Specify a user name that will be used as a prefix for all users. Example: `test`
User Name Start Number	Specify a start number. Example: `1` **Note** QES removes leading zeros in starting numbers. For example, `001` becomes `1`.
Number of Users	Specify the number of users. Example: `5`

Note
The username format is `[username prefix][user number]`. The specified start number and number of users determine the user number.
Using the examples, the users created will have the following usernames: `test1`, `test2`, `test3`, `test4`, and `test5`.

5. Specify a password for all users that will be created in this batch.
6. Click **Next**.
   QES creates the user accounts and adds them to the displayed user list.
7. Click **Finish**.
   The **Multiple Users Creation Wizard** closes.

User Account Lists

The NAS supports importing user accounts from TXT, CSV, and BIN files. The files contain user account information including usernames, passwords, user groups, and quota settings.

File Format	Description
TXT	Create user account lists using a text editor. For details, see Creating a TXT User Account List.
CSV	Create user account lists using Microsoft Excel. For details, see Creating a CSV User Account List.
BIN	QNAP NAS devices can export user account information, including quota settings, to BIN files. For details, see Exporting Users and Quota.

Creating a TXT User Account List

1. Create a new file in a text editor.
2. Specify user information in the following format:
   `Username,Password,Quota (MB),Group Name`

Important

- Separate values using commas.
- Specify information for only one user in each line.
  Example:
  ```
  John,s8fk4b,30,Sales
  Jane,9fjwbx,40,Marketing
  Mary,f9xn3ns,10,RD
  ```

3. Save the file.

Important
If the list contains multi-byte characters, save the file with UTF-8 encoding.

Creating a CSV User Account List

1. Create a new workbook in Microsoft Excel.
2. Specify user information in the following format:
   - column A: `Username`
   - column B: `Password`
   - column C: `Quota (MB)`
   - column D: `Group name`

Important
Specify information for only one user in each row.
Example:

	A	B	C	D
1	John	s8fk4b	30	Sales
2	Jane	9fjwbx	40	Marketing
3	Mary	f9xn3ns	10	RD

3. Save the workbook as a CSV file.

Important
If the list contains multi-byte characters, open the file using a text editor and then save with UTF-8 encoding.

Importing Users

1. Go to **Control Panel** > **Privilege** > **Users** .
2. Click **Create** > **Import/Export Users** .
   The **Import/Export Users** window appears.
3. Select **Import user and user group settings**.
4. Click **Browse**, and then select the file that contains the user account list.

Important
Ensure that you are importing a valid QES user account list file to avoid parsing errors.

For details, see User Account Lists.

5. Click **Next**.
   QES imports the user account list.
6. Click **Finish**.
   QES displays the imported user account information.

Exporting Users

1. Go to **Control Panel** > **Privilege** > **Users** .
2. Click **Create** > **Import/Export Users** .
   The **Import/Export Users** window appears.
3. Select **Export user and user group settings**.
4. Click **Next**.
   QES exports the user account list to a BIN file on your computer.

Tip
You can use this file to import users to another NAS running QES.

User Management

Changing User Passwords

1. Go to **Control Panel** > **Privilege** > **Users** .

2. Identify a user.
3. Under **Action**, click  .
   The **Change Password** window appears.
4. Specify a password that contains 5 to 64 ASCII characters.
5. Specify the password again.
6. Click **Apply**.
   QES saves the new password.

Editing User Account Profiles

1. Go to **Control Panel** > **Privilege** > **Users** .
2. Identify a user.
3. Under **Action**, click  .
   The **Edit Account Profile** window appears.
4. Modify any of the following information.

Field	Description
Email (optional)	Specify the user's email address.
Phone number	Specify the user's phone number. The information is for your reference and is not used by QES.
Description (optional)	Specify a user description that contains a maximum of 50 characters.
Disable this account	Select this option to disable the user account. You can either select to disable the account **Now** or specify an **Expiry Date**.
Quota	Specify a quota limit for the user. **Note** This option is only available when user quotas are enabled. For more details, see Configuring Quota Settings.

5. Click **OK**.
   QES saves the changes.

Editing a User's Groups

1. Go to **Control Panel** > **Privilege** > **Users** .
2. Identify a user.
3. Under **Action**, click  .
   The **Edit User's Groups** window appears.
4. Select or deselect user groups.
   For details, see User Groups.

5. Click **Apply**.
   QES saves the changes.

Editing Application Privileges

1. Go to **Control Panel** > **Privilege** > **Users**
2. Identify a user.
3. Under **Action**, click  .
   The **Edit Application Privileges** window appears.
4. Select the applications that the user is allowed to access.
5. Click **Apply**.
   QES saves the changes.

Deleting Users

1. Go to **Control Panel** > **Privilege** > **Users**
2. Select the user accounts that you want to delete.
3. Click **Delete**.
   A warning message appears.
4. Click **OK**.
   QES deletes the selected user accounts.

Home Folders

Enabling home folders creates a personal folder for each local and domain user on the NAS. Users can access their home folder through Microsoft networking, FTP, and File Station.

All the home folders are located in the homes shared folder. By default, only the administrator can access this folder.

Enabling Home Folders

1. Go to **Control Panel** > **Privilege** > **Users** .
2. Click **Home Folder**.
   The **Home Folder** window appears.
3. Select **Enable home folder for all users**.
4. Select a storage pool where the home folder will be created.
5. Click **Apply**.

User Groups

A user group is a collection of users with the same access rights to files or folders. Administrators can create user groups to manage folder permissions for multiple users.

Default User Groups

User Group	Description
administrators	Users in this group can configure settings, create users, and install applications. You cannot delete this group.
users	Users in this group can only view and modify files. This group contains all local user accounts and can be used to grant shared folder permissions to all local user accounts. You cannot delete this group.

Creating User Groups

1. Go to **Control Panel** > **Privilege** > **User Groups**
2. Click **Create**.
   The **Create a User Group** window appears.
3. Specify the following information:

Field	Description
User group name	Specify a user group name that contains 1 to 32 characters from any of the following groups: • Letters: A to Z, a to z • Numbers: 0 to 9 • Multi-byte characters: Chinese, Japanese, Korean, and Russian • Dashes (-)
Description	Specify a description that contains a maximum of 128 ASCII characters.

4. Optional: Add users to the user group.
   a. Under **Assign users to this group**, click **Edit**.
   b. Select one or more users.
5. Specify shared folder permissions for the user group.
   a. Under **Edit shared folder permissions**, click **Edit**.
   b. Select the permissions for each shared folder.
      For details, see Conflicts in Shared Folder Permissions.
6. Click **Create**.
   QES creates the user group and then adds it to the **User Groups** screen.

Editing a User Group's Description

1. Go to **Control Panel** > **Privilege** > **User Groups**
2. Identify a user group.

3. Under **Action**, click  .
   The **View Group Details** window appears.
4. Modify the description.
5. Click **OK**.
   QES saves the changes.

Editing User Groups

1. Go to **Control Panel** > **Privilege** > **User Groups**
2. Identify a user group.
3. Under **Action**, click  .
   The **Edit User Group** window appears.
4. Select the users you want to include or remove from the group.
5. Click **Apply**.
   QES saves the changes.

Deleting User Groups

1. Go to **Control Panel** > **Privilege** > **User Groups**
2. Select the user groups that you want to delete.
3. Click **Delete**.
   A warning message appears.
4. Click **OK**.
   QES deletes the selected user groups.

Shared Folder Permissions

Conflicts in Shared Folder Permissions

When a user is assigned different permissions for a shared folder, QES uses the following hierarchy to resolve conflicts.

1. No Access (Deny)
2. Read/Write (RW)
3. Read Only (RO)

User Permission	User Group Permission	Actual Permission
No Access	No Access	No Access
Read Only		No Access
Read/Write		No Access
Not Specified		No Access

User Permission	User Group Permission	Actual Permission
No Access	Read Only	No Access
Read Only		Read Only
Read/Write		Read/Write
Not Specified		Read Only
No Access	Read/Write	No Access
Read Only		Read/Write
Read/Write		Read/Write
Not Specified		Read/Write
No Access	Not Specified	No Access
Read Only		Read Only
Read/Write		Read/Write
Not Specified		No Access

Editing a User's Shared Folder Permissions

1. Go to **Control Panel** > **Privilege** > **Users**
2. Identify a user.
3. Under **Action**, click  .
   The **Edit Shared Folder Permissions** window appears.
4. Select the permissions the user will have for each shared folder.

Option	Description
Read Only (RO)	The user group can read but not write files in the shared folder.
Read/Write (RW)	The user group can read and write files in the shared folder.
Deny	The user group cannot read or write files in the shared folder.

   For details, see Conflicts in Shared Folder Permissions.

5. Click **Apply**.
   QES saves the changes.

Editing a User Group's Shared Folder Permissions

1. Go to **Control Panel** > **Privilege** > **User Groups**
2. Identify a user group.
3. Under **Action**, click  .
   The **Edit Shared Folder Permissions** window appears.
4. Select the permissions the user group will have for each shared folder.

Option	Description
Read Only (RO)	The user group can read but not write files in the shared folder.
Read/Write (RW)	The user group can read and write files in the shared folder.

Option	Description
Deny	The user group cannot read or write files in the shared folder.

For details, see Conflicts in Shared Folder Permissions.

5. Click **Apply**.
   QES saves the changes.

Quota

To efficiently allocate storage space, you can specify a quota value (in megabytes or gigabytes) that applies to all users. When the feature is enabled, QES prevents users from uploading data to the NAS once the quota is reached. By default, no quotas are set for the users.

Configuring Quota Settings

1. Go to **Control Panel** > **Privilege** > **Quota** .
2. Select **Enable a quota for all users**.
3. Specify the **Quota size on the disk**.
4. Click **Apply**.

Tip
You can specify a quota size for each user. For details, see Editing User Account Profiles.

Exporting Quota Settings

You can export quota settings to a CSV file after you have configured them. For details, see Configuring Quota Settings.

You can use the exported settings to review the quota allocated for each user or as a reference when configuring user accounts on other devices.

1. Go to **Control Panel** > **Privilege** > **Quota** .
2. Click **Generate**.
3. Click **Download**.

Domain Security

The NAS supports user authentication by local access right management, Microsoft Active Directory (AD), and Lightweight Directory Access Protocol (LDAP) directory.

By joining the NAS to an Active Directory domain or an LDAP directory, AD or LDAP users can access the NAS using their own accounts without extra user account configuration on the NAS.

Note
QES supports AD running on Windows Server 2003, 2008, 2008 R2, 2012, 2012 R2, and 2016.

The following options are available on the **Domain Security** screen.

Option	Description
No domain security	Only the local users can access the NAS.
Active Directory Authentication	Local and AD users can access the NAS using Samba, FTP, and File Station.
LDAP Authentication	Local and LDAP users can access the NAS using Samba, FTP, and File Station.

Active Directory (AD) Authentication

Active Directory (AD) is a hierarchical data center that centrally holds information for users, user groups, and computers for secure access management. Windows environments use AD to store, share, and manage a network's information and resources.

When you join a NAS to an AD domain, the NAS automatically imports all of the AD server's user accounts. AD users will be able to use the same login details to access the NAS.

When joining a domain controller using a dual-controller ES NAS such as ES1640dc or ES1640dc v2, you must connect both management ports of each controller to the network switch.

Configuring Active Directory (AD) Authentication Using the Quick Configuration Wizard

1. Go to **Control Panel** > **Privilege** > **Domain Security** .
2. Select **Active Directory authentication (Domain member)**.
3. Click **Quick Configuration Wizard**.
   The **Active Directory Wizard** appears.
4. Read the introduction, and then click **Next**.
5. Specify the fully qualified domain name (FQDN) of the AD DNS server, and then type ENTER.
   QES automatically generates the **NetBIOS domain name**.
6. Specify the IP address of the AD DNS server.
7. Click **Next**.
8. Select a domain controller.
9. Specify the domain administrator username and password.
10. Click **Join**.
    The NAS joins the domain.
11. Click **Finish**.
    The **Active Directory Wizard** closes.

Configuring Active Directory (AD) Authentication Manually

1. Verify the following:
   - The time settings of the NAS and the AD server are identical. The maximum time disparity tolerated is 5 minutes. For details, see Configuring the Time Settings.
   - The AD server is configured as the primary DNS server. If you use an external DNS server, you will not be able to join the domain. For details, see Network.

- You have specified the IP address of the WINS server that you use for name resolution. For details, see Configuring Microsoft Networking Settings.

2. Log in to the NAS as an administrator.
3. Go to **Control Panel** > **Privilege** > **Domain Security** .
4. Select **Active Directory authentication (Domain member)**.
5. Click **Manual Configuration**.
   The **Active Directory** box appears.
6. Specify the following AD information:

Field	Description
Domain NetBIOS Name	Example: qnap
AD Server Name	Example: dc1
Domain	Example: qnap.com
Domain Administrator User Name	The specified user must have administrator access rights to the AD domain. Example: admin
Domain Administrator Password	Example: password123
Organizational Unit (Optional)	You can specify the organizational unit the NAS belongs to. Example: computers
Server Description (Optional)	The NAS Samba service replicates this in the server's **Comment** field. You will see this description when connecting to a NAS Samba share using the command line interface. Example: QNAP ES1652DC NAS

7. Click **Join**.

Active Directory (AD) Server and Domain Names

After joining the NAS to the AD domain, you can use the following username formats to log into the NAS and access shared folders:

- Local users: `NASname\NASusername`
- Active Directory users: `Domain\DomainUsername`

The location of your Active Directory server and domain names varies depending on your Windows Server version.

Windows Server Version	Location
2003	Go to **System Properties** in Windows. Example: If the computer name is "node1.qnap-test.com", the AD server name is "node1", and the domain name is "qnap-test.com".
2008	Go to **Control Panel** > **System** in Windows. The AD server name will appear as the computer name, and the domain name can be found in the domain field.

Windows Server Version	Location
2012, 2016	Right-click  , and then click **System**. The AD server name will appear as the computer name, and the domain name can be found in the domain field.

Trusted Domains

A trusted domain is a domain that Active Directory (AD) trusts to authenticate users. If you join the NAS to an AD domain, all users from trusted domains can log on and access shared folders.

Trusted domains are configured in AD. You can only enable trusted domains on the NAS. By default, this feature is disabled in QES.

Enabling Trusted Domain Authentication

1. Log on to the NAS as an administrator.
2. Go to **Control Panel** > **Network & File Services** > **Win/NFS** > **Microsoft Networking** .
3. Click **Advanced Options**.
   The **Advanced Options** window appears.
4. Select **Enable trusted domains**.
5. Click **Apply**.
   The **Advanced Options** window closes.
6. Click **Apply**.

LDAP Authentication

An LDAP (Lightweight Directory Access Protocol) server stores user and user group information. Administrators can use LDAP to manage users in the LDAP server and to connect to multiple NAS devices with the same logon details. This feature requires a running LDAP server and knowledge of FreeBSD servers, LDAP servers, and Samba.

Configuring LDAP Authentication

1. Log on to the NAS as an administrator.
2. Go to **Control Panel** > **Privilege** > **Domain Security** .
3. Select **LDAP authentication**.
4. Specify the following information:

Field	Description
LDAP Server Host	Host name or IP address of the LDAP server

Field	Description
LDAP Security	Method the NAS uses to communicate with the LDAP server • **ldap:// =** Use a standard LDAP connection. The default port is 389. • **ldap:// (ldap + SSL)** = Use an encrypted connection with SSL. The default port is 686. Older versions of LDAP servers normally use this port. • **ldap:// (ldap + TLS)** = Use an encrypted connection with TLS. The default port is 389. Newer versions of LDAP servers normally use this port.
Base DN	LDAP domain Example: `dc=mydomain,dc=local`
Root DN	LDAP root user Example: `cn=admin, dc=mydomain,dc=local`
Password	Root user password
Users Base DN	Organizational unit (OU) where users are stored Example: `ou=people,dc=mydomain,dc=local`
Groups Base DN	OU where groups are stored Example: `ou=group,dc=mydomain,dc=local`

5. Click **Apply**.
   The **LDAP authentication options** window appears.
6. Select which users are allowed to access the NAS.
   For details, see LDAP Authentication Options.
7. Click **Finish**.

LDAP Authentication Options

The **LDAP authentication options** vary depending on when Microsoft Networking is enabled.

To enable Microsoft Networking, see Configuring Microsoft Networking Settings.

Condition	Options
Microsoft Networking is enabled while LDAP settings are applied.	• **Local users only**: Only local users can access the NAS using Microsoft Networking. • **LDAP users only**: Only LDAP users can access the NAS using Microsoft Networking.
Microsoft Networking is enabled after the NAS is connected to the LDAP server.	• **Standalone Server**: Only local users can access the NAS using Microsoft Networking. • **LDAP Domain Authentication**: Only LDAP users can access the NAS using Microsoft Networking.

LDAP Authentication via Server Message Block (SMB)

Authenticating LDAP users requires third-party software and a Samba schema.

Third-party Software

Software applications such as the following allow management of LDAP users and Samba passwords.

Application	Description
LDAP Account Manager (LAM)	Web-based front end interface available at http://www.ldap-account-manager.org/
smbldap-tools	Command line tool
webmin/ldap-useradmin	Web-based LDAP user administration module

Samba Schema

Importing the Samba schema to the LDAP server requires a samba.schema file. You can find this file in the directory `examples/LDAP` in the Samba source distribution. For details, refer to the documentation or FAQ of the LDAP server.

Below is a Samba schema example for openldap in the FreeBSD server where the LDAP server is running. The schema varies depending on the FreeBSD distribution.

```
zcat /usr/share/doc/samba-doc/examples/LDAP/samba.schema.gz >
      /etc/ldap/schema/samba.schema
```

When editing openldap server configuration files like `/etc/ldap/slapd.conf`, the following lines should be present:

```
include /etc/ldap/schema/samba.schemainclude
/etc/ldap/schema/cosine.schemainclude
/etc/ldap/schema/inetorgperson.schema
include /etc/ldap/schema/nis.schema
```

Configuration Examples

The following are some domain name examples you can use as guides when configuring LDAP authentication.

- FreeBSD OpenLDAP Server

Field	Example
Base DN	`dc=qnap,dc=com`
Root DN	`cn=admin,dc=qnap,dc=com`
Users Base DN	`ou=people,dc=qnap,dc=com`
Groups Base DN	`ou=group,dc=qnap,dc=com`

- Mac Open Directory Server

Field	Example
Base DN	`dc=macserver,dc=qnap,dc=com`
Root DN	`uid=root,cn=users,dc=macserver,dc=qnap,dc=com`
Users Base DN	`cn=users,dc=macserver,dc=qnap,dc=com`
Groups Base DN	`cn=groups,dc=macserver,dc=qnap,dc=com`

Active Directory (AD) and LDAP Management

The administrator can perform the following tasks when the NAS joins an AD domain or connects to an LDAP server.

Task	Steps
View and modify users	1. Go to **Privilege** > **Users** 2. Select **Domain Users** . QES displays the list of domain users. To modify a user's privileges, see User Management.
View and modify user groups	1. Go to **Privilege** > **User Groups** 2. Select **Domain Groups** . QES displays a list of domain user groups. To modify a user group, see User Groups.

Tip

Click  to display newly created users or user groups in the AD or LDAP server. User permission settings are automatically synchronized with the domain controller.

6. Network and File Services Settings

Win/NFS

Microsoft Networking

Configuring Microsoft Networking Settings

1. Go to **Control Panel** > **Network & File Services** > **Win/NFS** > **Microsoft Networking** .
2. Select **Enable file service for Microsoft Networking**.
3. Specify the following:

Setting	User Action
Server description (Optional)	Specify a description that contains a maximum of 256 characters. The description must enable users to easily identify the NAS on a Microsoft network.
Workgroup	Specify a workgroup name that contains 1 to 15 characters from any of the following groups: • Letters: A to Z, a to z • Numbers: 0 to 9 • Multi-byte characters: Chinese, Japanese, Korean, and Russian • Special characters: ~ ! @ # $ ^ & ( ) - _ { } . '

4. Select an authentication method.

Option	Description
Standalone server	QES uses the local user account information for authentication. For details, see User Creation.
AD Domain Member	QES uses Microsoft Active Directory (AD) for authentication. For details, see Active Directory (AD) Authentication.
LDAP domain authentication	QES uses an LDAP directory for authentication. For details, see LDAP Authentication.

5. Configure the advanced settings.
   a. Click **Advanced Options**.
   The **Advanced Options** window opens.
   b. Specify the following information:

Option	User Action
Use the specified WINS server	Select this option to specify a WINS server IP address that the NAS will use for name resolution. Do not select this option if you are unsure about the settings.

Option	User Action
Local master browser	Select this option to use the NAS as a local master browser. A local master browser is responsible for maintaining the list of devices in a specific workgroup on a Microsoft network. When deselected, another device on the network maintains the device list. **Important** To use the NAS as local master browser, you must specify the name of the workgroup that your NAS belongs to. The default workgroup in Windows is "workgroup".
Allow only NTLMv2 authentication	Select this option to authenticate clients using only NT LAN Manager version 2 (NTLMv2). When this option is deselected, the NAS uses NT LAN Manager (NTLM).
Name resolve priority	Select the name service that you want to use for name resolution. The default service is **DNS only**. If you specified a WINS server, **Try WINS then DNS** is selected by default.
Automatically register in DNS	Select this option to register the NAS on the DNS server. If the NAS IP address changes, the NAS automatically updates the IP address on the DNS server. This option is only available if Active Directory (AD) authentication is enabled. For details, see Active Directory (AD) Authentication.
Enable trusted domains	Select this option to join users from trusted AD domains. For details, see Trusted Domains. This option is only available if Active Directory (AD) authentication is enabled. For details, see Active Directory (AD) Authentication.
Enable Asynchronous I/O	Select this option to improve the Samba performance using asynchronous I/O. Asynchronous I/O refers to the I/O behavior on the CIFS protocol layer. This is different from the synchronous I/O feature found in the shared folder settings, which only applies to specific shared folders on the file system level. **Tip** To prevent power interruption, use a UPS when asynchronous I/O is enabled.
Force Encryption Transport	Select this option to encrypt all data using Microsoft Networking. When selected, only SMB 3 clients can connect to the NAS.
Highest SMB version	Select the SMB protocol version for your Microsoft Networking operations. Use the default SMB version if you are unsure about this setting.

   c. Click **Apply**.

6. Click **Apply**.

NFS Service

Enabling the NFS service allows Linux and FreeBSD users to connect to the NAS.

- To configure NFS permissions, see Configuring NFS Host Access Permissions.

- To connect to the NAS from Linux using NFS, see Mounting a Shared Folder on a Linux Computer.

.

Enabling the NFS Service

1. Go to **Control Panel** > **Network & File Services** > **Win/NFS** > **NFS Service** .
2. Select **Enable NFS Service**.
3. Click **Apply**.

FTP

The NAS FTP service helps optimize FTP data transfer. To use the service, you must configure the settings and then connect the NAS to an FTP client such as FileZilla.

Configuring FTP Service Settings

1. Go to **Control Panel** > **Network & File Services** > **FTP** > **FTP Service** .
2. Select **Enable FTP Service**.
3. Configure the following settings:

Setting	User Action
Protocol type	Select the protocols to use. At least one protocol must be selected. • **FTP**: Standard file transfer protocol • **FTP with TLS (Explicit)**: File transfer protocol with channel encryption
TLS version	Select which TLS version to use for FTP with TLS.
Port number	Specify the port number that the FTP service will use.
Enforce Unicode-only filenames	Select one of the following options. **Yes**: Your FTP client supports Unicode encoding. **No**: Your FTP client does not support Unicode encoding. **Tip** To correctly display the file and folder names, specify a filename encoding language. For details, see Configuring the Codepage Settings.
Maximum number of all FTP connections	Specify the maximum number of allowed FTP connections for the NAS. The maximum possible number that you can specify is 1024.
Maximum number of connections for a single account	Specify the maximum number of allowed FTP connections for single user accounts. The maximum possible number that you can specify is 1024.
Enable FTP transfer limitation	Select this option, and then specify the maximum upload and download rates.

4. Click **Apply All**.

Configuring the FTP Service Advanced Settings

1. Go to **Control Panel** > **Network & File Services** > **FTP** > **Advanced** .
2. Configure the following settings:

Setting	User Action
Passive FTP port range	Select one of the following options. • **Use the default port range**: Use ports 55536 to 56559. • **Define port range**: Specify a port range larger than 1023. **Important** When specifying a custom port range, ensure that your router and firewall ports are open.
Respond with external IP address for passive FTP connection requests	Enable this option and then specify an external IP address. Remote devices can use this IP address to connect to the NAS FTP server. **Important** Use this feature when the following conditions are true: • The NAS is using a passive FTP connection. • The NAS FTP server is behind a router. • Remote devices cannot connect to the FTP server over the WAN.
Enable Site-to-Site Transfer (FXP)	Enable File eXchange Protocol (FXP). FXP enables an FTP client to transfer data directly from one FTP server to another, without routing the data through the client's connection.

3. Click **Apply All**.

SSH

Enabling the Secure Shell (SSH) service on the NAS allows administrators to connect to the NAS using an SSH-encrypted connection or SSH clients such as PuTTY.

Configuring SSH

1. Go to **Control Panel** > **Network & File Services** > **SSH** .
2. Select **Allow SSH connection**.
3. Specify a port number from 1 to 65535.

Tip
The default SSH port is 22.

4. Click **Apply**.

SNMP

Enabling the Simple Network Management Protocol (SNMP) service on the NAS allows the immediate reporting of NAS events, such as warnings or errors, to an SNMP management station (SNMP manager).

Configuring the SNMP Settings

1. Go to **Control Panel** > **Network & File Services** > **SNMP** .
2. Select **Enable SNMP Service**.
3. Specify the following information:

Setting	User Action
Port number	Specify the port that the SNMP manager will use to connect to the NAS.
SNMP Trap Level	Select the type of alert messages that the NAS will send to the SNMP manager. • **Information**: QES sends information regarding ongoing or scheduled NAS operations. • **Warning**: QES alerts you when the NAS resources are critically low or the hardware behaves abnormally. • **Error**: QES alerts you when enabling NAS features or updating applications fail.
Trap Address	Specify the IP addresses of the SNMP manager. You can specify a maximum of 3 trap addresses.

4. Select the SNMP version that the SNMP manager uses.

Option	User Action
SNMP V1/V2	Specify an SNMP community name that contains 1 to 64 characters from any of the following groups: • Letters: A to Z, a to z • Numbers: 0 to 9 The SNMP community string functions as a password that is used to authenticate messages sent between the SNMP manager and the NAS. Every packet that is transmitted between the SNMP manager and the SNMP agent includes the community string.
SNMP V3	Specify the user name, authentication protocol and password, and privacy protocol and password. For details, see Configuring the SNMP V3 Settings.

5. Click **Apply**.

Configuring the SNMP V3 Settings

1. Specify a user name.
   The user name should contain 1 to 32 characters from any of the following groups:

- Letters: A to Z, a to z
- Numbers: 0 to 9
- Multi-byte characters: Chinese, Japanese, Korean, and Russian
- Special characters: ~ @ # $ % ^ * - = _ + { } [ ] ? , . :

2. Optional: Select **Use Authentication**.
   a. Specify the authentication protocol.

Tip
You can select either **HMAC-MD5** or **HMAC-SHA**. If you are unsure about this setting, QNAP recommends selecting **HMAC-SHA**.

   b. Specify an authentication password.
   The password must contain 8 to 64 characters from any of the following groups:
      - Letters: A to Z, a to z
      - Numbers: 0 to 9
      - Special characters: ~ @ # $ % ^ & * - = _ + { } | [ ] ? , . :

3. Optional: Select **Use Privacy**.
   a. Specify the privacy protocol.

Tip
You can select either **DES** or **AES**. If you are unsure about this setting, QNAP recommends selecting **AES**.

   b. Specify a privacy password.
   The password must contain 8 to 64 characters from any of the following groups:
      - Letters: A to Z, a to z
      - Numbers: 0 to 9
      - Special characters: ~ @ # $ % ^ & * - = _ + { } | [ ] ? , . :

SNMP Management Information Base (MIB)

The Management Information Base (MIB) is a type of database in ASCII text format that is used to manage the NAS in the SNMP network. The SNMP manager uses the MIB to determine the NAS status or understand the messages that the NAS sends within the network. You can download the MIB and then view the contents using any word processor or text editor.

Important
MIBs describe the structure of the management data of a device subsystem. They use a hierarchical namespace containing object identifiers (OID). Each OID identifies a variable that you can read or set using SNMP. You must assign the correct OID to retrieve the NAS information. The default OID for QNAP ES NAS devices is 1.3.6.1.4.1.24861.2.

Downloading the SNMP MIB

1. Go to **Control Panel** > **Network & File Services** > **SNMP** .

2. Under **SNMP MIB**, click **Download**.
   QES downloads the NAS.mib file on your computer.

Service Discovery

Bonjour

Bonjour is a networking technology developed by Apple that enables usage of devices and services on a network. Enabling Bonjour allows Mac computers to automatically discover network services that are running on the NAS without requiring you to specify IP addresses or configure DNS servers.

Configuring the Bonjour Settings

You must enable all relevant services before configuring the Bonjour settings.

1. Go to **Control Panel** > **Network & File Services** > **Service Discovery** > **Bonjour** .
2. Select the services that you want Bonjour to broadcast.
3. Click **Apply**.

Network Recycle Bin

The Network Recycle Bin contains files that users have deleted from the NAS through File Station, FTP, and Samba. You can specify file types to exclude from the bin.

Configuring the Network Recycle Bin

1. Go to **Control Panel** > **Network & File Services** > **Network Recycle Bin** .
2. Select **Enable Network Recycle Bin**.
3. Optional: Specify the file extensions to exclude.
4. Click **Apply**.

Deleting All Files in the Network Recycle Bin

1. Go to **Control Panel** > **Network & File Services** > **Network Recycle Bin** .
2. Click **Empty All Network Recycle Bin**.
   A warning message appears.
3. Click **OK**.
   QES deletes all files in the Network Recycle Bin.

Restricting Access to the Network Recycle Bin

1. Go to **Control Panel** > **Storage Manager** > **Storage Space** .
2. Click a shared folder.
3. Click **Actions** > **Edit Properties** .
   The **Shared Folder Properties** window appears.
4. Under **Advanced Settings**, click **Edit**.

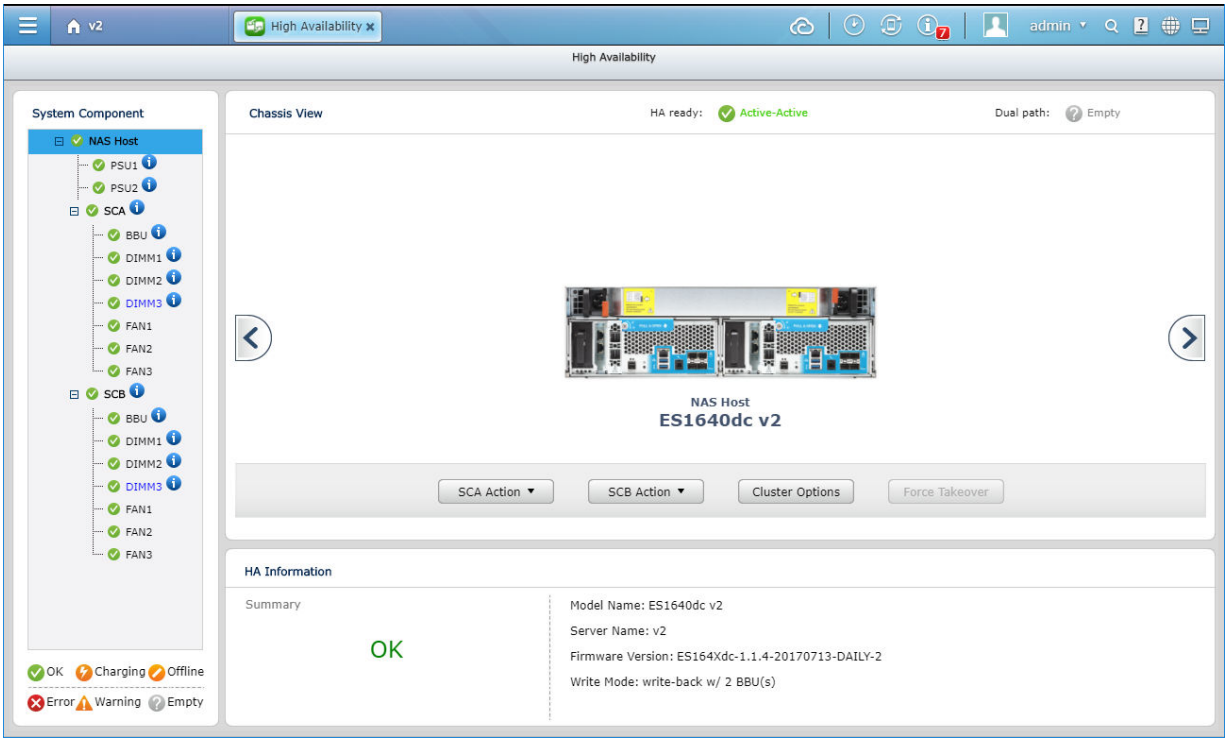
5. Under **Recycle Bin**, select **Enabled**.
6. Select **Restrict the access to Recycle Bin to administrators only for now**.
7. Click **Apply**.

7. High Availability

About High Availability

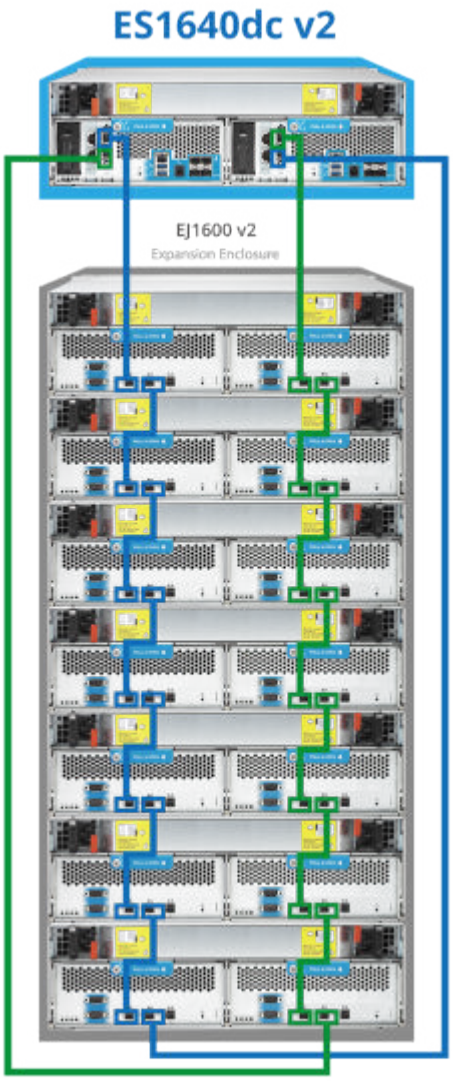
High availability enables you to manage the storage controllers of your NAS. QNAP ES Series NAS devices are designed with a dual active-active controller architecture. If one controller fails, the other one immediately takes over to eliminate downtime.

Important
TES NAS models do not support high availability.



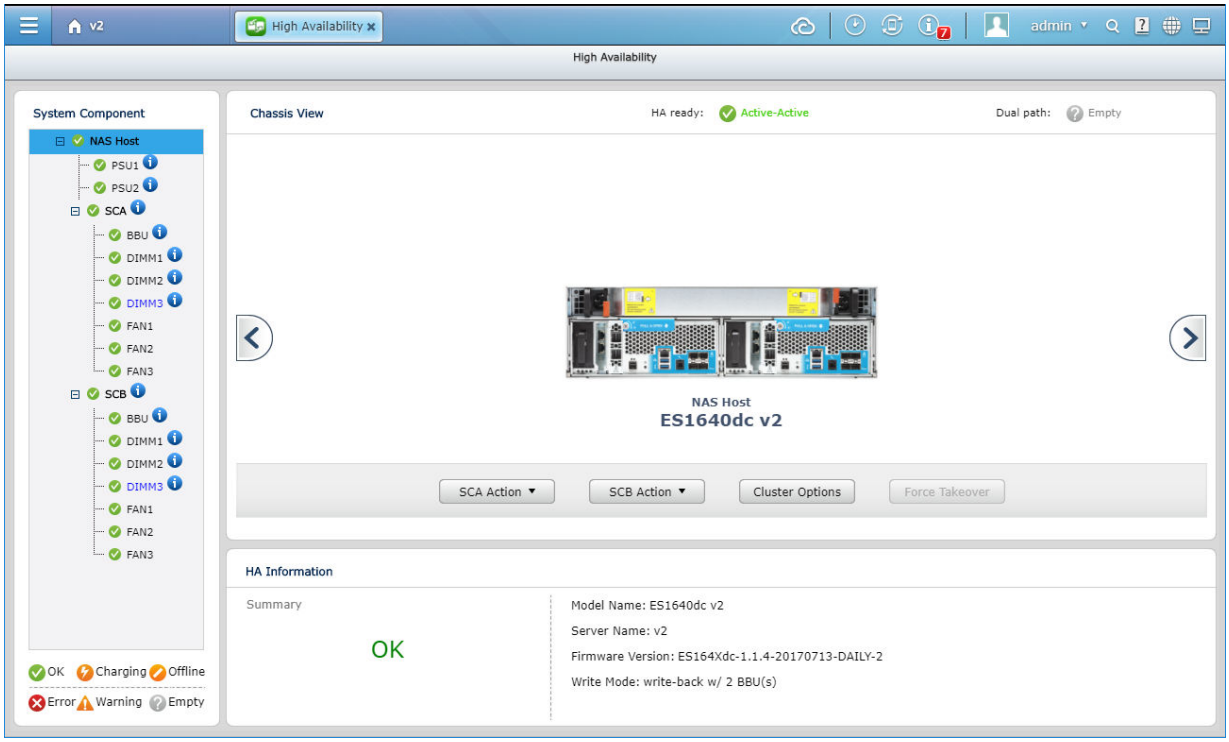
Dual Path Overview

ES series NAS models use a redundant cross loop cabling configuration to connect the storage controllers and the JBODs. This ensures continuous operation even if one cable is disconnected or damaged. The following image provides an example of dual-path cabling.



System Components

Select a system component in the left panel to see its location within the main NAS chassis and additional hardware information.



Component	Description	HA Information	Additional Information
NAS host	The ES NAS	Model name, server name, firmware version, write mode	Write mode: • Write-back: QES writes incoming data to NVRAM first, notifies the host that the write command was completed, and then writes the data to disk storage later. • Write-through: QES writes incoming data to both NVRAM and disk, and then notifies the host that the write command was completed. This mode is enabled when a BBU is not working.
REXP	Expansion enclosure	Model name	

Component	Description	HA Information	Additional Information
SCA, SCB	Storage controller	Host name, machine status, initialized	Machine status: • power_on: The controller is working normally. • power_off: The controller is powered off. • empty: There is no controller installed in the bay. • connecting: The communication channel between SCA and SCB is not established. • boot: The communication channel between SCA and SCB is established. The controller is starting up.
ECA, ECB	Expansion enclosure controller	Machine status	
PSU	Power supply unit	Temperature, fan speed Nas host only: Model, power	
BBU	Backup battery unit	Capacity, temperature, voltage, serial number, manufacturing date, initialization date	
DIMM	Memory module	Manufacturer, type, serial number, size, speed	
FAN	Internal fan	Fan speed Nas host only: Mode	

System Component Status

Status	Description
OK	The component is functioning properly.
Charging	The battery is charging.
Offline	The component is disabled. QES cannot communicate with it.
Error	The component is not functioning properly. You should replace it immediately.
Warning	The component might fail soon.
Empty	The component is missing or not installed.

System Availability Status

The **High Availability** window contains the following status indicators.

Status Indicator	Description
HA ready	This shows the current high availability status of the NAS.
Dual Path	This shows the status of the connections between the storage controllers and the JBODs.

HA Ready Status

Status	Description
Active-Active	Both controllers on the NAS are working properly and active.
Taking over	Only one controller is active and it is taking control from the other controller.
Takeover	Only one controller is active.
Giving back	Only one controller is active and it is returning control to the inactive controller.

Dual Path Status

Status	Description
Dual Path	The storage controllers and JBODs are connected through two independent paths. This ensures continuous operation of the NAS even if one cable is damaged or disconnected.
Single Path	The storage controllers and JBODs are connected though one path.
Empty	No JBODs are connected to the NAS.

Storage Controller Actions

Action	Description
Takeover	The controller takes over all services while the other controller transitions into standby mode. HA status changes to `Takeover`.
Giveback	The controller gives back services to the other inactive controller. HA status changes to `Active-Active`.
Restart	The controller restarts.
Shutdown	The controller powers off.
Power On	The controller powers on.
Force Takeover	A recovered controller is forced to take over if it does not regain control automatically. This button becomes available only if a takeover or giveback attempt is unsuccessful.

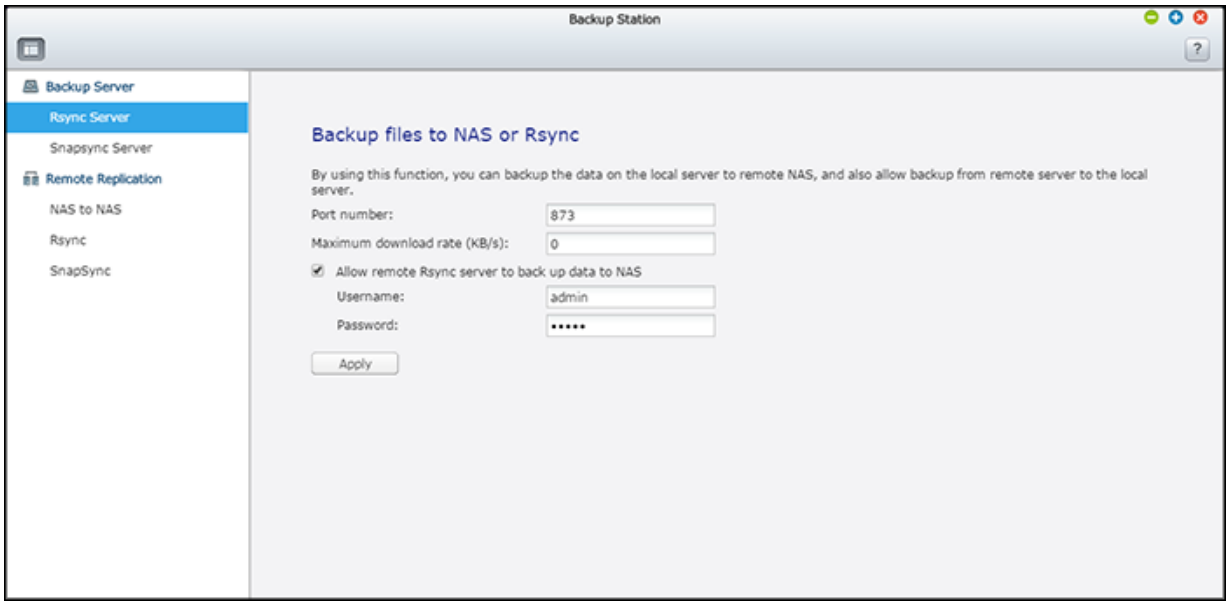
Cluster Options

Setting	Description
System failover protection	When a controller fails, the other controller automatically takes over.
Failover when network fails	When a controller becomes inaccessible as a result of network connection failure, the other controller automatically takes over.
Failover when JBOD fails	When a JBOD that is connected to a controller becomes inaccessible, the other controller automatically takes over.
Automatically failback when system recovers	When a controller functions again after an automatic failover, it initiates a giveback and then regains control.
Prevent failback repeatedly	When automatic failback is unsuccessful, the recovered controller might repeatedly try to initiate failback. Enabling this feature causes a recovered controller to attempt failback only twice, once every 30 seconds. QES then disables automatic failback for 24 hours and changes the HA status to `Locked`. During this 24-hour period you can manually initiate a failback by clicking **Giveback** on the working controller. If this succeeds QES enables automatic failback again.
Management port failover	When the management interface of one controller fails, the other controller automatically takes over. This feature is disabled if static IP addresses are not assigned to the management interfaces of both controllers.

8. Applications

Backup Station

Backup Station enables you to back up files and folders to other remote NAS devices. You can also configure QES as a backup destination for other NAS.



Comparison of Backup Methods

Source	Destination	Backup Method
QES	QES	SnapSync (Recommended), NAS to NAS
QES	QTS	NAS to NAS
QES	Linux	Rsync
QTS	QES	NAS to NAS
Linux	QES	Rsync (with SSH)

Rsync

Rsync is file transfer utility that enables you to synchronize files between QNAP NAS devices and Unix clients.

Configuring the Rsync Server

1. Go to **Backup Station** > **Backup Server** > **Rsync Server** .
2. Configure the following settings.

Setting	Description
Port number	The port used for incoming and outgoing Rsync connections. The default port is 873.

Setting	Description
Enable maximum download rate	Limit the amount of bandwidth used by clients backing up this NAS using Rsync. 0 is unrestricted.
Allow remote Rsync server to back up data to the NAS	UNIX clients can back up to this NAS using Rsync.

3. Click **Apply**.

Creating an Rsync Backup Job

1. Go to **Backup Station** > **Remote Replication** > **Rsync** .
2. Click **Create a Replication Job**.
3. Specify a job name.
4. Configure the remote server.
   a. Click **Settings**.
   b. Configure the following remote site settings.

Setting	Description
Name or IP address of the remote server	The remote server DNS name or IP address.
User name	The username of the remote user. The user must have full read/write access and a sufficient quota limit on the remote server.
Password	The password of the remote user.
Port Number	The Rsync port of the remote server. The default is 873.
Enable encryption	Rsync transfers are encrypted for additional security. SSH connections must be enabled on the remote server and the remote user must have permission to perform SSH encrypted backup jobs. Port number: The SSH port of the remote server .

   c. Optional: Test the remote server connection.
   d. Click **Apply**.
5. Select the source folder.
   The source folder is a local shared folder or subfolder.
6. Select the destination folder.
   The destination folder is a shared folder or subfolder on the remote server.
7. Click **Add**.
8. Optional: Configure job options.
   a. Click **Options**.
   b. Configure the following settings.

Setting	Description
Activate file compression:	QES compresses the data before sending it to the destination. The destination NAS decompresses the data before saving it to disk. Enabling this setting can reduce transfer times if your NAS or the remote NAS have slow network connections, or are connecting via a WAN.
Perform incremental replication:	On the first run of a job, Rsync replicates all files to the remote server. On subsequent runs, Rsync only replicates files that have been modified since the last run. **Tip** QNAP recommends enabling this setting as it can greatly reduce backup times.
Delete extra files on remote destination	By default, Rsync only adds new files and updates modified files at the destination. Enabling this setting causes Rsync to delete files from the destination folder if they no longer exist in the source folder.
Handle sparse files efficiently	A sparse file is a type of computer file that contains large blocks of zero-byte data. Enabling this setting allows Rsync to replicate sparse files more quickly.
Replicate ACL and extended attributes	Rsync replicates ACLs for Windows files and extended attributes for Mac and UNIX files. **Important** QES and the remote server must have the same ACL features enabled and be joined to the same domain.
Maximum transfer rate (KB/s)	Limit the amount of bandwidth used by Rsync. By configuring this setting, you can prevent Rsync from consuming all bandwidth and affecting NAS storage performance. 0 is unrestricted.
Check file contents	By default, Rsync determines if two files in the source and destination are identical by comparing their filenames, last modified dates and file sizes. When this setting is enabled, Rsync also compares content of both files using checksums.
Send alert emails when the following events occur	You can receive an email alert each time a job fails or finishes successfully. The SMTP server must be configured in QES at **Control Panel** > **System** > **Notification** > **E-mail** > **SMTP Server** .

9. Configure a job schedule.
   a. Click **Backup frequency**.
   b. Select **Enable schedule**.
   c. Specify the schedule.
      The job can be scheduled to run daily, weekly, monthly, or to repeat after a certain number of hours.
   d. Click **Apply.**
10. Optional: Select **Execute backup immediately**.

The job will run immediately after you finish creating the job. Subsequent runs will follow the backup schedule.

11. Click **Apply**.

QES creates the job, and then runs it if you selected **Execute backup immediately**.

Rsync Job Settings

To configure the following settings, go to **Backup Station** > **Remote Replication** > **Rsync** and click **Options**.

Setting	Description
Timeout (seconds)	If no data is received from the remote server during an Rsync job, QES waits for the specified number of seconds and then stops the job.
Number of retries	After an Rsync job fails, QES runs the job again until the specified number of retries is reached.
Retry intervals (second)	QES waits for the specified number of seconds between each retry.

Rsync Job Buttons

Icon	Action	Description
	Start	Run the job immediately.
	Stop	Stop a running job.
	Rsync Log	View the job's logs.
	Edit	Edit the job's settings.
	Disable schedule	Disable the job's schedule.
	Enable schedule	Enable the job's schedule. This button is only active if a schedule is configured for the job.

NAS to NAS Backups

Creating a NAS to NAS Backup Job

1. Go to **Backup Station** > **Remote Replication** > **NAS to NAS** .
2. Click **Create a Replication Job**.
3. Specify a job name.
4. Configure the remote server.
   a. Click **Settings**.
   b. Configure the following remote site settings.

Setting	Description
Name or IP address of the remote server	The remote server DNS name or IP address.
User name	The username of the remote user. The user must have full read/write access and a sufficient quota limit on the remote server.
Password	The password of the remote user.
Port Number	The Rsync port of the remote server. The default is 873.
Enable encryption	Transfers are encrypted for additional security. SSH connections must be enabled on the remote server and the remote user must have permission to perform SSH encrypted backup jobs. Port number: The SSH port of the remote server .

c. Optional: Test the remote server connection.

d. Click **Apply**.

5. Select the source folder.
   The source folder is a local shared folder or subfolder.

6. Select the destination folder.
   The destination folder is a shared folder or subfolder on the remote server.

7. Click **Add**.

8. Configure the following settings.

Setting	Description
Activate file compression:	QES compresses the data before sending it to the destination. The destination NAS decompresses the data before saving it to disk. Enabling this setting can reduce transfer times if your NAS or the remote NAS have slow network connections, or are connecting via a WAN.
Perform incremental replication:	On the first run of a job, Rsync replicates all files to the remote server. On subsequent runs, Rsync only replicates files that have been modified since the last run.  **Tip** QNAP recommends enabling this setting, as it can greatly reduce backup times.
Delete extra files on remote destination	By default, Rsync only adds new files and updates modified files at the destination. Enabling this setting causes Rsync to delete files from the destination folder if they no longer exist in the source folder.
Handle sparse files efficiently	A sparse file is a type of computer file that contains large blocks of zero-byte data. Enabling this setting allows Rsync to replicate sparse files more quickly.
Replicate ACL and extended attributes	Rsync replicates ACLs for Windows files and extended attributes for Mac and UNIX files.  **Important** QES and the remote server must have the same ACL features enabled and be joined to the same domain.

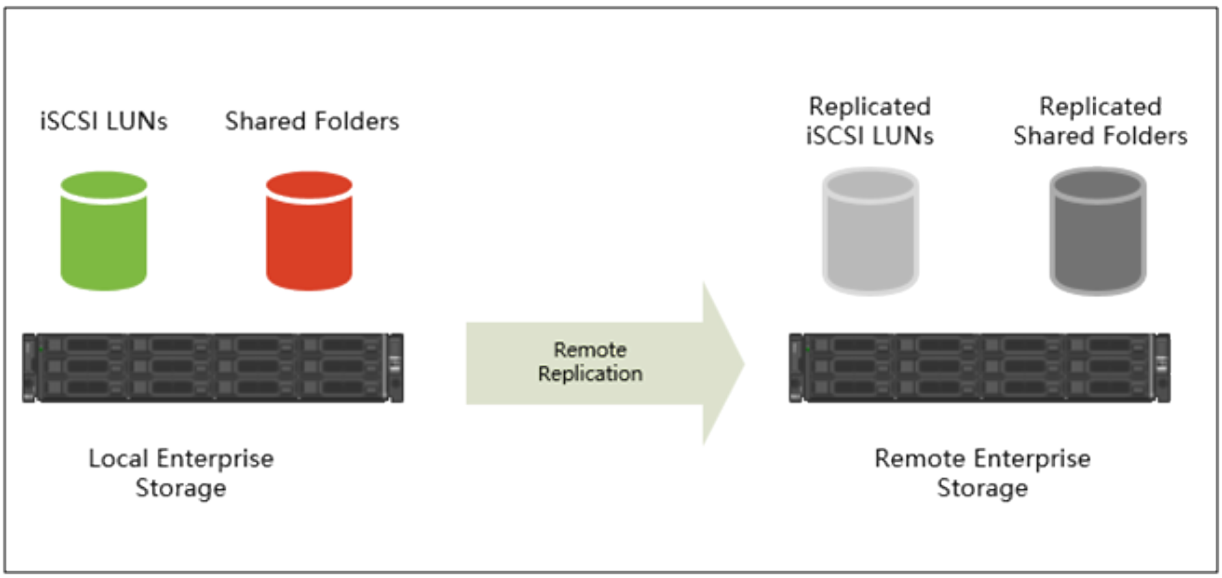
Setting	Description
Maximum transfer rate (KB/s)	Limit the amount of bandwidth used by Rsync. By configuring this setting, you can prevent Rsync from consuming all bandwidth and affecting NAS storage performance. 0 is unrestricted.
Check file contents	By default, Rsync determines if two files in the source and destination are identical by comparing their filenames, last modified dates and file sizes. When this setting is enabled, Rsync also compares content of both files using checksums.
Send alert emails when the following events occur	You can receive an email alert each time a job fails or finishes successfully. The SMTP server must be configured in QES at **Control Panel** > **System** > **Notification** > **E-mail** > **SMTP Server** .

9. Configure a job schedule.
   a. Click **Backup frequency**.
   b. Select **Enable schedule**.
   c. Specify the schedule.
      The job can be scheduled to run daily, weekly, monthly, or to repeat after a certain number of hours.
   d. Click **Apply.**
10. Optional: Select **Execute backup immediately**.
    The job will run immediately after you finish creating the job. Subsequent runs will follow the backup schedule.
11. Click **Apply**.

QES creates the job, and then runs it if you selected **Execute backup immediately**.

SnapSync

SnapSync is a block-level replication utility that enables you to back up files from your NAS to another QNAP ES NAS using snapshots. SnapSync recovery times are faster than other methods, because restoration only requires a full backup and the last differential backup.



Important
The following restrictions apply after creating a SnapSync job.

- If the destination is a shared folder, the folder becomes read-only.
- If the destination is a LUN, the LUN becomes read-only and inaccessible to iSCSI initiators.

The restrictions are removed if the job is deleted.

Enabling the SnapSync Server

1. Go to **Backup Station** > **SnapSync Server** .
2. Select **Enable SnapSync Server**.
3. Configure the following settings.

Setting	Description
Port number	The port used for incoming and outgoing SnapSync connections. The default port is 874.
Enable maximum download rate	Limit the amount of bandwidth used by SnapSync. 0 is unrestricted.

4. Click **Apply**.

Adding a SnapSync host

1. Go to **Backup Station** > **SnapSync Server** .
2. Click **Create Host**.
   The **Create Host** window opens.
3. Specify the following information.

Field	Description
Remote IP Address	The IP address of the remote host. It must be a QNAP ES NAS running QES 2.0.0 or later.
Remote Port	SnapSync port on the remote NAS. The default port for SnapSync is 874.
User Name	Username of a remote user. The user must have full read/write access and a sufficient quota limit on the remote server.
Remote Port	Password of the remote user.

4. Click **Apply**.

Scheduled SnapSync

Creating a Scheduled SnapSync Job

1. Go to **Backup Station** > **Remote Replication** > **SnapSync** .
2. Click **Create a Replication Job**.
3. Specify a job name.
   The name cannot contain any of the following special characters: ` * = + [ ] \ | ; : ' " , < > / ? %
4. Select **Scheduled**.
5. Select the backup destination.
   Choose from one of the following settings.

Setting	Description
Local Interface	Back up from one shared folder to another shared folder on the same NAS.
Remote Host	Back up to another ES NAS. If the NAS does not appear in the list of SnapSync hosts then click **Add** to add it.

6. Select the source storage pool.
7. Select the source shared folder or LUN.
8. Select the destination storage pool.
9. Optional: Click **New** to create a new destination shared folder.
10. Select the destination shared folder or LUN.
11. Select the source IP address.
    QES will use this IP address to send data when running this job. This setting is only available if the destination is another NAS.
12. Select the destination IP address.
    QES on the remote NAS will use this IP address to receive data when running this job. This setting is only available if the destination is another NAS.
13. Optional: Test the connection between the source and destination NAS devices.
14. Optional: Configure the following jobs settings.

Setting	Description
Compression	QES compresses the data before sending it to the destination. The destination NAS decompresses the data before saving it to disk. Enabling this setting can improve transfer times if your NAS or the remote NAS have slow network connections, or are connecting via a WAN.
Deduplication	QES reduces the amount of storage and bandwidth needed by eliminating duplicate copies of repeated data.
Send alert emails when the following events occur	You can receive an email alert each time a job fails or finishes successfully. The SMTP server must be configured in QES at **Control Panel** > **System** > **Notification** > **E-mail** > **SMTP Server** .

15. Configure a job schedule.
    a. Click **Backup frequency**.
    b. Select **Enable schedule**.
    c. Specify the schedule.
    The job can be scheduled to run daily, weekly, monthly, or to repeat after a certain number of hours.
    d. Click **Apply.**
16. Optional: Select **Execute backup immediately**.
    The job will run immediately after you finish creating the job. Subsequent runs will follow the backup schedule.
17. Click **OK**.

QES creates the job, and then runs it if you selected **Execute backup immediately**.

Editing a Scheduled SnapSync Job

When editing a scheduled SnapSync job, you cannot change the following settings:

- Replication Type
- Remote Host
- Source Pool
- Source Shared Folder/LUN
- Destination Pool
- Destination Shared Folder/LUN

1. Go to **Backup Station** > **Remote Replication** > **SnapSync** .
2. Locate the job you want to edit.
3. If the job is running, click  .
   The job stops.

4. Click  .
   The **Remote Replication** window opens.
5. Configure the job settings.
6. Click **OK**.

Deleting a Scheduled SnapSync Job

1. Go to **Backup Station** > **Remote Replication** > **SnapSync** .
2. Select a job.
3. Click  .
   The job's state changes to `Suspended`.
4. Click **Delete**.
   A confirmation message appears.
5. Click **OK**.

Scheduled SnapSync Job Buttons

Icon	Action	Description
	Start	Run the job immediately.
	Stop	Stop a running job.
	Edit	Edit the job settings. For details, see Editing a Scheduled SnapSync Job
	Suspend job	The job no longer runs according to it's schedule.
	Resume job	The job runs according to its schedule. If QES detects that the source and destination folders are different, then it immediately runs the job and synchronizes them.

Scheduled SnapSync Status

Status	Description
Idle	The job is not currently running.
Starting	SnapSync is preparing to run the job.
Ready	The job is not currently running. This status appears after deleting a SnapSync job, and then creating a new job with the same name and the same source and destination. Delete and then recreate an existing job.
Updated	The job has finished running. The source was synchronized to a destination on a remote NAS.
Local Updated	The job has finished running. The source was synchronized to a destination on the local NAS.

Status	Description
Suspended	The job was suspended by a user clicking **Suspend job** on the source or destination NAS.
Not run yet	The job was created but has not been run.
Updating	The job is running. SnapSync is synchronizing data from the source folder to the destination folder.
Disconnected	The two NAS devices are disconnected.

Real-Time SnapSync

Real-time SnapSync synchronizes changes to data immediately with the destination folder, instead of periodically. Each time data is written to the source, it is also written to the destination. Compared to scheduled SnapSync, real-time SnapSync reduces backup time and reduces the risk of data loss.

Important

- Both the source and destination NAS must be running QES version 2.0.0 or later.
- Both the source and destination NAS should run the same version of QES to ensure data consistency.
- For good performance the round trip latency between the local and remote sites must be 5ms or less. Higher latency might cause local storage write delays.

Creating a Real-Time SnapSync Backup Job

1. Go to **Backup Station** > **Remote Replication** > **SnapSync** .
2. Click **Create a Replication Job**.
3. Specify a job name.
   The name cannot contain any of the following special characters: ` * = + [ ] \ | ; : ' " , < > / ? %
4. Select **Real-Time**.
5. Select the remote backup destination.
6. Select the source storage pool.
7. Select the source shared folder or LUN.
8. Select the destination storage pool.
9. Optional: Click **New** to create a new destination shared folder.
10. Select the destination shared folder or LUN.

Warning
All data in the shared folder will be deleted.

11. Select the source IP address.
    QES will use this IP address to send data when running this job. This setting is only available if the destination is another NAS.
12. Select the destination IP address.
    QES on the remote NAS will use this IP address to receive data when running this job. This setting is only available if the destination is another NAS.

13. Optional: Test the connection between the source and destination NAS devices.
14. Optional: Configure the following jobs settings.

Setting	Description
Compression	QES compresses the data before sending it to the destination. The destination NAS decompresses the data before saving it to disk. Enabling this setting can improve transfer times if your NAS or the remote NAS have slow network connections, or are connecting via a WAN.
Deduplication	QES reduces the amount of storage and bandwidth needed by eliminating duplicate copies of repeated data.
Send alert emails when the following events occur	You can receive an email alert each time a job fails or finishes successfully. The SMTP server must be configured in QES at **Control Panel** > **System** > **Notification** > **E-mail** > **SMTP Server** .

15. Click **OK**.

QES begins synchronizing the source folder to the destination folder.

Editing a Real-Time SnapSync Job

When editing a real-time SnapSync job, you can only modify the following two settings:

- Compression
- Deduplication

1. Go to **Backup Station** > **Remote Replication** > **SnapSync** .
2. Locate the job you want to edit.
3. If the job is running, click  .
   The job's state changes to `Consistent`.
4. Click  .
   The job's state changes to `Split`.
5. Click  .
   The **Remote Replication** window opens.
6. Configure the job settings.
7. Click **OK**.
8. Optional: Click  to start the job.

Deleting a SnapSync Backup Job

1. Go to **Backup Station** > **Remote Replication** > **SnapSync** .
2. Select a job.

3. If the job is running, click  .
   The job's state changes to `Consistent`.
4. Click  .
   The job's state changes to `Split`.
5. Click **Delete**.
   A confirmation message appears.
6. Click **OK**.

Real-Time SnapSync Job Buttons

Icon	Action	Description
	Start	Start a stopped or suspended job. QES immediately synchronizes the source and destination folders.
	Stop	Stop a running job.
	Edit	Edit the job settings. For details, see Editing a Real-Time SnapSync Job .
	Suspend job	The source and destination folders no longer connected.

Real-Time SnapSync Status

Status	Description
Inactive	The job has been created but has not started synchronizing yet.
Synchronizing	The job has run started running. QES is synchronizing the source and destination folders.
Synchronized	The source and destination folders are synchronized.
Inconsistent	The job has stopped running. The files in the source and destination folders are not identical. The destination folder is read-only.
Consistent	The job has stopped running. The files in the source and destination folders are identical. The destination folder is read-only.
Split	The source and destination folders are no longer paired. The destination folder has full read/write permissions.
Connection failed	The two NAS devices are disconnected.

Accessing a SnapSync Destination Folder

The destination shared folder has separate permissions from the source folder. To access a destination folder, you must configure its access permissions on the destination NAS.

Important

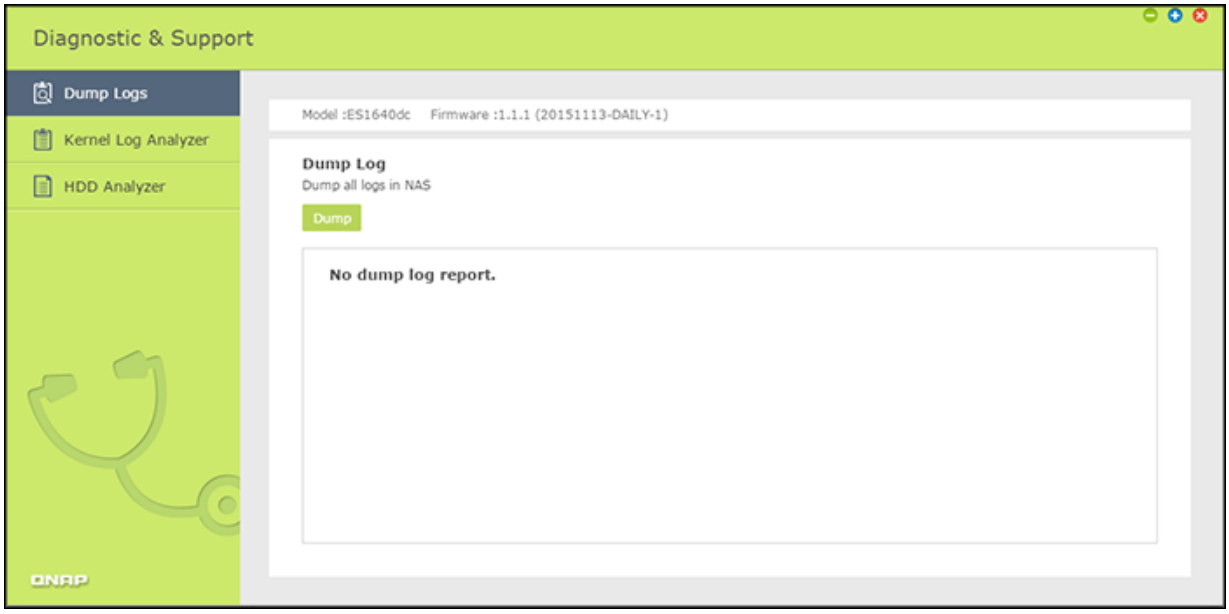
> The destination folder of a SnapSync job is configured as read-only. To restore full read/write permissions you must suspend the SnapSync job.

1. Log onto the destination NAS using an account with administrator permissions.
2. Go to **Storage Manager** > **Storage** > **Storage Space** .
3. Select the destination storage pool.
4. Select the destination folder.
   The **Shared Folder Manager** window opens.
5. Select **Actions** > **Edit Properties** .
   The **Shared Folder Properties** window opens.
6. Under **Storage Settings and Services**, click **Edit**.
7. Select one or more storage services.
8. Click **Apply**.
9. Click **Permissions**.
   The **Shared Folder** window opens
   .
10. Select **Users and groups permission**.
11. Configure user and group access permission, then click **Apply**.
    You can only select RO (read-only) permissions. For details, see Configuring User and Group Permissions.
12. Configure NFS host access.
    For details, see Configuring NFS Host Access Permissions.
13. Configure SMB host access.
    For details, see Configuring SMB Host Access Control.

You can now access the destination folder.

Diagnostic Tool

The Diagnostic Tool provides several features for checking the stability of the NAS. Users can export system kernel records to quickly check whether abnormal operations have recently occurred. In addition, users can send the records to QNAP technical support for further investigation. The Diagnostic tool also provides features for checking the file system, hard drives, and RAM.



Tip
QNAP strongly recommends using the Diagnostic Tool to efficiently troubleshoot NAS issues.

Downloading System Logs

1. Go to **Control Panel** > **Applications** > **Diagnostic Tool** > **Dump Log** .
2. Click **Dump**. The system will produce a .zip file.
3. Download the .zip file.
4. Optional: Send the file to QNAP technical support for further investigation.

Analyzing Kernel Logs

1. Go to **Control Panel** > **Applications** > **Diagnostic Tool** > **Kernel Log Analyzer** .
2. Click **Start**.

QES will show the results of the kernel log analysis.

Analyzing Hard Disk Drives

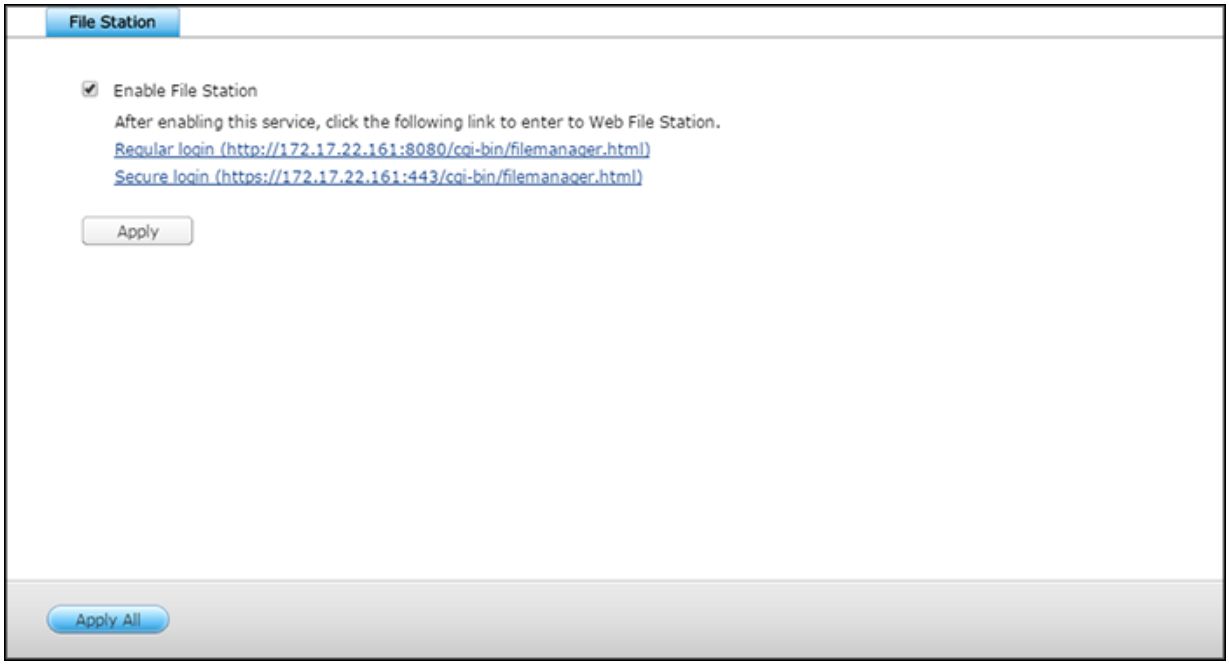
1. Go to **Control Panel** > **Applications** > **Diagnostic Tool** > **HDD Analyzer** .
2. Perform one of the following actions.

Action	Steps
Dump SMART test logs	**a.** Select **Dump SMART value**. **b.** Select the enclosure you wish to analyze. **c.** Click **Dump**. **Note** You can download the SMART test logs after they have been dumped.
Test system performance	**a.** Select **Test performance**. **b.** Select the enclosure you wish to analyze. **c.** Click **Start**. **Note** QES will show the results of the system performance test.
Dump RAID logs	**a.** Select **Dump RAID information**. **b.** Select the pool you wish to analyze. **c.** Click **Update**. **Note** QES will show the results of the RAID information dump.

Tip
QNAP recommends sending these logs to technical support when you open a technical support request.

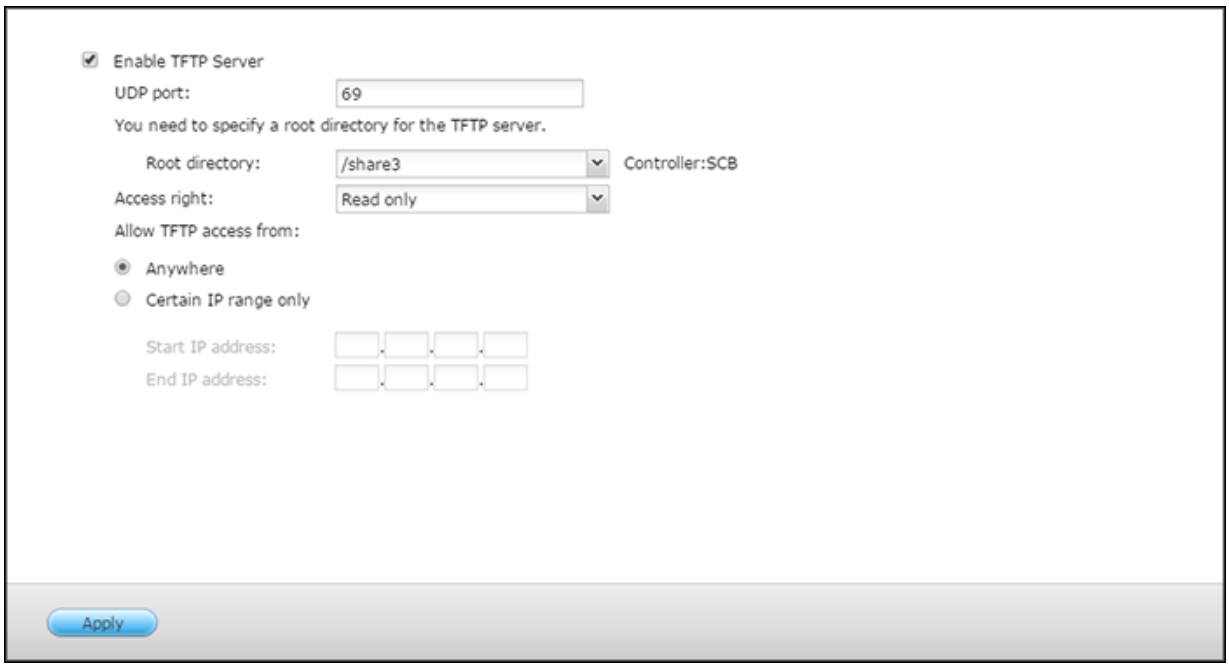
Station Manager

Station Manager is an integrated control panel for enabling and disabling QNAP stations. File Station is currently the only station on QES.



TFTP Server

Trivial File Transfer Protocol (TFTP) is a basic form of FTP. You can configure the NAS as a TFTP server for network device management and remote network booting. TFTP does not provide user authentication and you cannot connect to it using a standard FTP client.



Enabling the TFTP Server

1. Go to **Control Panel** > **Applications** > **TFTP Server** .
2. Select **Enable TFTP Server**.

3. Specify the UDP port.
   The default UDP port is 69.
4. Specify the TFTP root directory.
   The TFTP root directory stores all files and folders uploaded to the NAS using TFTP.
5. Select access rights.

Option	Description
Read only	TFTP clients can view and download files.
Full access	TFTP clients can view, modify, upload, and download files.

6. Configure TFTP client access.

Option	Description
Anywhere	
Certain IP range only	

7. Click **Apply**.

QES enables the TFTP server.

Virtualization

The QNAP ES NAS is a virtualization-ready storage solution that includes VMware vSphere, Microsoft Hyper-V, and Citrix XenServer, as well as VAAI for iSCSI, VAAI for NAS, and Offloaded Data Transfer (ODX). The NAS supports thin provisioning and storage reclamation, and QNAP offers network accessories that support 10GbE and SSD cache. In addition, you can use vSphere Client and SMI-S Provider to increase productivity and efficiency.

For more information, go to https://www.qnap.com/en/how-to/tutorial/zfs-virtualization.

VAAI for iSCSI and VAAI for NAS

For details, go to https://files.qnap.com/news/pressresource/datasheet/QNAP_Plugin_for_VMWare_vStorage_API_for_Array_Integration_(VAAI)(English).pdf

Offloaded Data Transfer (ODX)

The ES NAS supports Offloaded Data Transfer (ODX) in Microsoft Windows Server 2016, making it a high-performance iSCSI storage solution for Hyper-V virtualized environments. By supporting ODX, the NAS can be offloaded with all the copying processes from Windows servers. ODX significantly reduces the load on Windows servers and improves the efficiency of copying and moving operations for Windows 2016 hosts that use QNAP iSCSI storage.

10GbE Support

A 10GbE network is essential for businesses that require high bandwidth for virtualization and quick, efficient backup and data restoration. The QNAP ES NAS series is a reliable storage solution for deploying a 10GbE environment. For details, go to https://www.qnap.com/solution/10gbe-ready/en/.

vSphere Client

The vSphere Client for the ES NAS is an interface between ESXi and the NAS. This tool enables system administrators to manage VMware datastores and verify the status of NAS units directly from the vSphere

Client. For details, go to https://www.qnap.com/en/how-to/tutorial/article/using-qnap-vsphere-web-client-plug-in-with-qnap-es-nas.

QNAP SMI-S Provider

The QNAP SMI-S Provider is required for System Center Virtual Machine Manager (SCVMM 2012). With the SMI-S Provider, the NAS can directly communicate with SCVMM 2012, and server management tasks can be facilitated for administrators. For details, see https://files.qnap.com/news/pressresource/datasheet/QNAP_Enterprise-class_ES_NAS_SMI-S_Provider_for_System_Center_Virtual_Machine_Manager(English).pdf.

CDDL License

COMMON DEVELOPMENT AND DISTRIBUTION LICENSE Version 1.0 (CDDL-1.0)

1. Definitions.

1.1. Contributor means each individual or entity that creates or contributes to the creation of Modifications.

1.2. Contributor Version means the combination of the Original Software, prior Modifications used by a Contributor (if any), and the Modifications made by that particular Contributor.

1.3. Covered Software means (a) the Original Software, or (b) Modifications, or (c) the combination of files containing Original Software with files containing Modifications, in each case including portions thereof.

1.4. Executable means the Covered Software in any form other than Source Code.

1.5. Initial Developer means the individual or entity that first makes Original Software available under this License.

1.6. Larger Work means a work which combines Covered Software or portions thereof with code not governed by the terms of this License.

1.7. License means this document.

1.8. Licensable means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any and all of the rights conveyed herein.

1.9. Modifications means the Source Code and Executable form of any of the following:

A. Any file that results from an addition to, deletion from or modification of the contents of a file containing Original Software or previous Modifications;

B. Any new file that contains any part of the Original Software or previous Modification; or

C. Any new file that is contributed or otherwise made available under the terms of this License.

1.10. Original Software means the Source Code and Executable form of computer software code that is originally released under this License.

1.11. Patent Claims means any patent claim(s), now owned or hereafter acquired, including without limitation, method, process, and apparatus claims, in any patent Licensable by grantor.

1.12. Source Code means (a) the common form of computer software code in which modifications are made and (b) associated documentation included in or with such code.

1.13. You (or Your) means an individual or a legal entity exercising rights under, and complying with all of the terms of, this License. For legal entities, You includes any entity which controls, is controlled by, or is under common control with You. For purposes of this definition, control means (a) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (b) ownership of more than fifty percent (50%) of the outstanding shares or beneficial ownership of such entity.

2. License Grants.

2.1. The Initial Developer Grant: Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, the Initial Developer hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Initial Developer, to use, reproduce, modify, display, perform, sublicense and distribute the Original Software (or portions thereof), with or without Modifications, and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using or selling of Original Software, to make, have made, use, practice, sell, and offer for sale, and/or otherwise dispose of the Original Software (or portions thereof).

(c) The licenses granted in Sections 2.1(a) and (b) are effective on the date Initial Developer first distributes or otherwise makes the Original Software available to a third party under the terms of this License.

(d) Notwithstanding Section 2.1(b) above, no patent license is granted: (1) for code that You delete from the Original Software, or (2) for infringements caused by: (i) the modification of the Original Software, or (ii) the combination of the Original Software with other software or devices.

2.2. Contributor Grant: Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Contributor to use, reproduce, modify, display, perform, sublicense and distribute the Modifications created by such Contributor (or portions thereof), either on an unmodified basis, with other Modifications, as Covered Software and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using, or selling of Modifications made by that Contributor either alone and/or in combination with its Contributor Version (or portions of such combination), to make, use, sell, offer for sale, have made, and/or otherwise dispose of: (1) Modifications made by that Contributor (or portions thereof); and (2) the combination of Modifications made by that Contributor with its Contributor Version (or portions of such combination).

(c) The licenses granted in Sections 2.2(a) and 2.2(b) are effective on the date Contributor first distributes or otherwise makes the Modifications available to a third party. (d) Notwithstanding Section 2.2(b) above, no patent license is granted: (1) for any code that Contributor has deleted from the Contributor Version; (2) for infringements caused by: (i) third party modifications of Contributor Version, or (ii) the combination of Modifications made by that Contributor with other software (except as part of the Contributor Version) or other devices; or (3) under Patent Claims infringed by Covered Software in the absence of Modifications made by that Contributor.

3. Distribution Obligations.

3.1. Availability of Source Code: Any Covered Software that You distribute or otherwise make available in Executable form must also be made available in Source Code form and that Source Code form must be distributed only under the terms of this License. You must include a copy of this License with every copy of the Source Code form of the Covered Software You distribute or otherwise make available. You must inform recipients of any such Covered Software in Executable form as to how they can obtain such Covered Software in Source Code form in a reasonable manner on or through a medium customarily used for software exchange.

3.2. Modifications: The Modifications that You create or to which You contribute are governed by the terms of this License. You represent that You believe Your Modifications are Your original creation(s) and/or You have sufficient rights to grant the rights conveyed by this License.

3.3. Required Notices: You must include a notice in each of Your Modifications that identifies You as the Contributor of the Modification. You may not remove or alter any copyright, patent or trademark notices contained within the Covered Software, or any notices of licensing or any descriptive text giving attribution to any Contributor or the Initial Developer.

3.4. Application of Additional Terms: You may not offer or impose any terms on any Covered Software in Source Code form that alters or restricts the applicable version of this License or the recipients rights hereunder. You may choose to offer, and to charge a fee for, warranty, support, indemnity or liability obligations to one or more recipients of Covered Software. However, you may do so only on Your own behalf, and not on behalf of the Initial Developer or any Contributor. You must make it absolutely clear that any such warranty, support, indemnity or liability obligation is offered by You alone, and You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of warranty, support, indemnity or liability terms You offer.

3.5. Distribution of Executable Versions: You may distribute the Executable form of the Covered Software under the terms of this License or under the terms of a license of Your choice, which may contain terms different from this License, provided that You are in compliance with the terms of this License and that the license for the Executable form does not attempt to limit or alter the recipients rights in the Source Code form from the rights set forth in this License. If You distribute the Covered Software in Executable form under a different license, You must make it absolutely clear that any terms which differ from this License are offered by You alone, not by the Initial Developer or Contributor. You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of any such terms You offer.

3.6. Larger Works: You may create a Larger Work by combining Covered Software with other code not governed by the terms of this License and distribute the Larger Work as a single product. In such a case, You must make sure the requirements of this License are fulfilled for the Covered Software.

4. Versions of the License.

4.1. New Versions: Sun Microsystems, Inc. is the initial license steward and may publish revised and/or new versions of this License from time to time. Each version will be given a distinguishing version number. Except as provided in Section 4.3, no one other than the license steward has the right to modify this License.

4.2. Effect of New Versions: You may always continue to use, distribute or otherwise make the Covered Software available under the terms of the version of the License under which You originally received the Covered Software. If the Initial Developer includes a notice in the Original Software prohibiting it from being

distributed or otherwise made available under any subsequent version of the License, You must distribute and make the Covered Software available under the terms of the version of the License under which You originally received the Covered Software. Otherwise, You may also choose to use, distribute or otherwise make the Covered Software available under the terms of any subsequent version of the License published by the license steward.

4.3. Modified Versions: When You are an Initial Developer and You want to create a new license for Your Original Software, You may create and use a modified version of this License if You: (a) rename the license and remove any references to the name of the license steward (except to note that the license differs from this License); and (b) otherwise make it clear that the license contains terms which differ from this License.

5. DISCLAIMER OF WARRANTY.

COVERED SOFTWARE IS PROVIDED UNDER THIS LICENSE ON AN AS IS BASIS, WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES THAT THE COVERED SOFTWARE IS FREE OF DEFECTS, MERCHANTABLE, FIT FOR A PARTICULAR PURPOSE OR NON-INFRINGING. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE COVERED SOFTWARE IS WITH YOU. SHOULD ANY COVERED SOFTWARE PROVE DEFECTIVE IN ANY RESPECT, YOU (NOT THE INITIAL DEVELOPER OR ANY OTHER CONTRIBUTOR) ASSUME THE COST OF ANY NECESSARY SERVICING, REPAIR OR CORRECTION. THIS DISCLAIMER OF WARRANTY CONSTITUTES AN ESSENTIAL PART OF THIS LICENSE. NO USE OF ANY COVERED SOFTWARE IS AUTHORIZED HEREUNDER EXCEPT UNDER THIS DISCLAIMER.

6. TERMINATION.

6.1. This License and the rights granted hereunder will terminate automatically if You fail to comply with terms herein and fail to cure such breach within 30 days of becoming aware of the breach. Provisions which, by their nature, must remain in effect beyond the termination of this License shall survive.

6.2. If You assert a patent infringement claim (excluding declaratory judgment actions) against Initial Developer or a Contributor (the Initial Developer or Contributor against whom You assert such claim is referred to as Participant) alleging that the Participant Software (meaning the Contributor Version where the Participant is a Contributor or the Original Software where the Participant is the Initial Developer) directly or indirectly infringes any patent, then any and all rights granted directly or indirectly to You by such Participant, the Initial Developer (if the Initial Developer is not the Participant) and all Contributors under Sections 2.1 and/or 2.2 of this License shall, upon 60 days notice from Participant terminate prospectively and automatically at the expiration of such 60 day notice period, unless if within such 60 day period You withdraw Your claim with respect to the Participant Software against such Participant either unilaterally or pursuant to a written agreement with Participant.

6.3. In the event of termination under Sections 6.1 or 6.2 above, all end user licenses that have been validly granted by You or any distributor hereunder prior to termination (excluding licenses granted to You by any distributor) shall survive termination.

7. LIMITATION OF LIABILITY.

UNDER NO CIRCUMSTANCES AND UNDER NO LEGAL THEORY, WHETHER TORT (INCLUDING NEGLIGENCE), CONTRACT, OR OTHERWISE, SHALL YOU, THE INITIAL DEVELOPER, ANY OTHER CONTRIBUTOR, OR ANY DISTRIBUTOR OF COVERED SOFTWARE, OR ANY SUPPLIER OF ANY OF SUCH PARTIES, BE LIABLE TO ANY PERSON FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY CHARACTER INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOST PROFITS, LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY AND ALL OTHER COMMERCIAL DAMAGES OR LOSSES, EVEN IF SUCH PARTY SHALL HAVE BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. THIS LIMITATION OF LIABILITY SHALL NOT APPLY TO LIABILITY FOR DEATH OR PERSONAL INJURY RESULTING FROM SUCH PARTYS NEGLIGENCE TO THE EXTENT APPLICABLE LAW PROHIBITS SUCH LIMITATION. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF

INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THIS EXCLUSION AND LIMITATION MAY NOT APPLY TO YOU.

8. U.S. GOVERNMENT END USERS.

The Covered Software is a commercial item, as that term is defined in 48 C.F.R. 2.101 (Oct. 1995), consisting of commercial computer software (as that term is defined at 48 C.F.R. 252.227-7014(a)(1)) and commercial computer software documentation as such terms are used in 48 C.F.R. 12.212 (Sept. 1995). Consistent with 48 C.F.R. 12.212 and 48 C.F.R. 227.7202-1 through 227.7202-4 (June 1995), all U.S. Government End Users acquire Covered Software with only those rights set forth herein. This U.S. Government Rights clause is in lieu of, and supersedes, any other FAR, DFAR, or other clause or provision that addresses Government rights in computer software under this License.

9. MISCELLANEOUS.

This License represents the complete agreement concerning subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable. This License shall be governed by the law of the jurisdiction specified in a notice contained within the Original Software (except to the extent applicable law, if any, provides otherwise), excluding such jurisdictions conflict-of-law provisions. Any litigation relating to this License shall be subject to the jurisdiction of the courts located in the jurisdiction and venue specified in a notice contained within the Original Software, with the losing party responsible for costs, including, without limitation, court costs and reasonable attorneys fees and expenses. The application of the United Nations Convention on Contracts for the International Sale of Goods is expressly excluded. Any law or regulation which provides that the language of a contract shall be construed against the drafter shall not apply to this License. You agree that You alone are responsible for compliance with the United States export administration regulations (and the export control laws and regulation of any other countries) when You use, distribute or otherwise make available any Covered Software.

10. RESPONSIBILITY FOR CLAIMS.

As between Initial Developer and the Contributors, each party is responsible for claims and damages arising, directly or indirectly, out of its utilization of rights under this License and You agree to work with Initial Developer and Contributors to distribute such responsibility on an equitable basis. Nothing herein is intended or shall be deemed to constitute any admission of liability.

GNU Public License

Version 3, 29 June 2007

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The GNU General Public License is a free, copy left license for software and other kinds of works.

The licenses for most software and other practical works are designed to take away your freedom to share and change the works. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change all versions of a program--to make sure it remains free software for all its users. We, the Free Software Foundation, use the GNU General Public License for most of our software; it applies also to any other work released this way by its authors. You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for them if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs, and that you know you can do these things.

To protect your rights, we need to prevent others from denying you these rights or asking you to surrender the rights. Therefore, you have certain responsibilities if you distribute copies of the software, or if you modify it: responsibilities to respect the freedom of others.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must pass on to the recipients the same freedoms that you received. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

Developers that use the GNU GPL protect your rights with two steps: (1) assert copyright on the software, and (2) offer you this License giving you legal permission to copy, distribute and/or modify it.

For the developers' and authors' protection, the GPL clearly explains that there is no warranty for this free software. For both users' and authors' sake, the GPL requires that modified versions be marked as changed, so that their problems will not be attributed erroneously to authors of previous versions.

Some devices are designed to deny users access to install or run modified versions of the software inside them, although the manufacturer can do so. This is fundamentally incompatible with the aim of protecting users' freedom to change the software. The systematic pattern of such abuse occurs in the area of products for individuals to use, which is precisely where it is most unacceptable. Therefore, we have designed this version of the GPL to prohibit the practice for those products. If such problems arise substantially in other domains, we stand ready to extend this provision to those domains in future versions of the GPL, as needed to protect the freedom of users.

Finally, every program is threatened constantly by software patents. States should not allow patents to restrict development and use of software on general-purpose computers, but in those that do, we wish to avoid the special danger that patents applied to a free program could make it effectively proprietary. To prevent this, the GPL assures that patents cannot be used to render the program non-free.

The precise terms and conditions for copying, distribution and modification follow.

Terms and Conditions

1. Definitions.
   “This License” refers to version 3 of the GNU General Public License.
   “Copyright” also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.
   “The Program” refers to any copyrightable work licensed under this License. Each licensee is addressed as “you”. “Licensees” and “recipients” may be individuals or organizations.
   To “modify” a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a “modified version” of the earlier work or a work “based on” the earlier work.
   A “covered work” means either the unmodified Program or a work based on the Program.
   To “propagate” a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.
   To “convey” a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.
   An interactive user interface displays “Appropriate Legal Notices” to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

2. Source Code.

The “source code” for a work means the preferred form of the work for making modifications to it. “Object code” means any non-source form of a work.
A “Standard Interface” means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.
The “System Libraries” of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A “Major Component”, in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.
The “Corresponding Source” for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.
The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.
The Corresponding Source for a work in source code form is that same work.

3. Basic Permissions.
All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.
You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.
Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

4. Protecting Users' Legal Rights From Anti-Circumvention Law.
No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.
When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

5. Conveying Verbatim Copies.
You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

6. Conveying Modified Source Versions.
You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

   a. The work must carry prominent notices stating that you modified it, and giving a relevant date.

   b. The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to “keep intact all notices”.

   c. You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

   d. If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.
   A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an “aggregate” if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

7. Conveying Non-Source Forms.
You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

   a. Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.

   b. Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

   c. Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

   d. Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e. Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.
A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.
A “User Product” is either (1) a “consumer product”, which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, “normally used” refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.
“Installation Information” for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.
If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).
The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.
Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

8. Additional Terms.
“Additional permissions” are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.
When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.
Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

a. Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or

b. Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or

c. Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or

d. Limiting the use for publicity purposes of names of licensors or authors of the material; or

e. Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f. Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.
All other non-permissive additional terms are considered “further restrictions” within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.
If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.
Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

9. Termination.
You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).
However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.
Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.
Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

10. Acceptance Not Required for Having Copies.
You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

11. Automatic Licensing of Downstream Recipients.
Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.
An “entity transaction” is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.
You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in

a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

12. Patents.
A “contributor” is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's “contributor version”.
A contributor's “essential patent claims” are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, “control” includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.
Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.
In the following three paragraphs, a “patent license” is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To “grant” such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.
If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. “Knowingly relying” means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.
If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.
A patent license is “discriminatory” if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.
Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

13. No Surrender of Others' Freedom.
If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

14. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

15. Revised Versions of this License.
The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.
Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License “or any later version” applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.
If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.
Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

16. Disclaimer of Warranty.
THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM “AS IS” WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

17. Limitation of Liability.
IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

18. Interpretation of Sections 16 and 17.
If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS
